EVINRUDE

QUIET OUTBOARD M

This man is a "security risk"!

ge, 29. Married. Two children. igh school education. Active in cal lodge, church, veterans' ganization. Employed by large anufacturing concern. Earns 2 a week.

SOUNDS like an Average Joe. And he is. Too average! He's got a job. It pays fairly well. He's satisfied.

But here's the catch. With the right kind of training, this young man could be stepping into better jobs. He could be making $7-8000 a year. He could be cashing in on those spare-time hours he now wastes.

As it stands now, he's stuck in his job. Can't seem to make any headway. He's reluctant to try. So he just hangs on.

This man is a "Security Risk" to his wife and children.

His family probably will never enjoy the comforts, the prestige, the good living that could be theirs. If hard times come, they are almost sure to be hurt. For an Average Joe can't expect to compete with trained men when the chips are down.

A man like this would do well to start a planned program of self-improvement. In his spare time. In a field related to his interests and abilities. Right NOW!

One good way to start—a way proved by hundreds of thousands of once-Average Joes who are making good today—is to enroll for special training with a recognized correspondence school. One like I. C. S., the oldest and largest in the world.

Don't *you* be a "Security Risk." Mail the coupon for full, free details while there is still time.

For Real Job Security—Get an I. C. S. Diploma! I. C. S., Scranton 15, Penna.

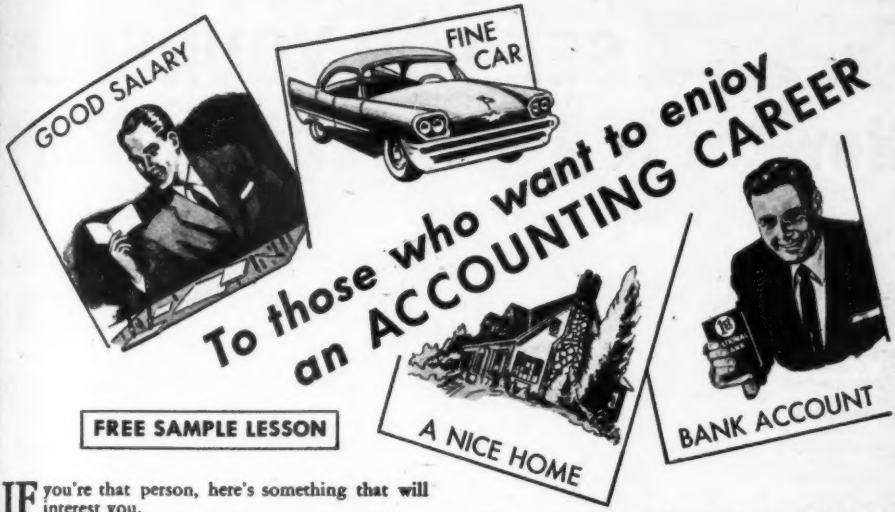
MEMBER AUDIT BUREAU OF CIRCULATIONS



FREE SAMPLE LESSON

IF you're that person, here's something that will interest you.

Not a magic formula—not a get-rich-quick scheme—but something more substantial, more practical.

Of course, you need something more than just the desire to be an accountant. You've got to pay the price—be willing to study earnestly, thoroughly.

Still, wouldn't it be worth your while to sacrifice some of your leisure in favor of interesting home study—over a comparatively brief period? Always provided that the rewards were good—a salary of $5,000 to $10,000 and up?

An accountant's duties are interesting, varied and of real worth to his employers. He has *standing!*

Do you feel that such things aren't for you? Well, don't be too sure. Very possibly they *can* be!

Why not, like so many before you, investigate LaSalle's modern Problem Method of training for an Accounting position?

Just suppose you were permitted to work in an accounting firm under the personal supervision of an expert accountant. Suppose, with his aid, you studied accounting principles and solved problems day by day—easy ones at first—then more difficult ones. If you could do this—and could turn to him for advice as the problems became complex — soon you'd master them all.

That's the training you follow in principle under the LaSalle Problem Method.

Over 4,500 Certified Public Accountants among LaSalle alumni

You cover accounting from Basic Accounting right through Principles and Cost Accounting. As you go along, you absorb the principles of Accounting Systems, Federal Income Tax, Certified Public Accountant Training, and prepare for the CPA examinations.

Your progress is as speedy as you care to make it—depending on your own eagerness to learn and the time you spend in study.

Will recognition come? The only answer, as you know, is that success *does* come to the man who is really *trained*. It's possible your employers will notice your improvement in a very few weeks or months. Indeed, many LaSalle graduates have paid for their training—with increased earnings—before they have completed it! For accountants, who are trained in organization and management, are the executives of the future.

Get Free Sample Lesson—Also "Opportunities in Accounting"

For your own good get all the facts about this completely new and modern accounting training. Write for Free Sample Lesson—also latest book "Opportunities in Accounting." They will prove that Accounting offers brilliant futures to those who aren't afraid of serious home study, and will show the wide range of opportunities that exist today. No cost or obligation. If you want a position of higher income, greater prestige and professional standing . . . MAIL THE COUPON NOW!

SEE FOR YOURSELF How to Fix Any Part of Any Car!

QUICKLY, EASILY and RIGHT on the very first try

THIS GIANT PICTURE BOOK SHOWS YOU STEP-BY-STEP HOW TO SERVICE OR REPAIR EVERY CAR BUILT FROM 1952 THRU 1959

Whether You're a Beginner or an Expert Mechanic—This Manual Can Help You "Breeze Through" the Toughest Auto Repair Job

3,000,000 COPIES SOLD!

Don't waste time, money, energy by trying to *guess* how to fix a car! Do what the experts do. No matter what make or model car—whether it's a simple carburetor adjustment or a complete overhaul—simply look up the job in the index of MOTOR'S New AUTO REPAIR MANUAL. Turn to page covering job. Follow the clear, illustrated, step-by-step instructions. See for yourself how easy it is!

No guesswork! MOTOR'S Manual takes nothing for granted. Tells you where to start. What tools to use. Then it leads you easily and quickly through the entire operation!

Over 2,850 Pictures! So Complete, So Simple, You CAN'T Go Wrong!

BRAND NEW EDITION covers everything you need to know to repair over 1,900 car models. 1,120 giant pages, 2,850 "This-Is-How" pictures, 193 "Quick-Check" charts, 30,000 essential specifications. Over 225,000 service and repair facts. Instructions and pictures are so crystal-clear you just *can't* go wrong!

Meat of 176 Official Shop Manuals

Engineers from every automobile plant in America worked out these time-saving procedures for their own motor car line. Now this wealth of "Know-How" from 176 Official Shop Manuals has been "boiled down" into crystal-clear terms in one handy indexed book!

MAKE BIG MONEY

TRAIN AT HOME for one of AMERICA'S "Big 3" OPPORTUNITY FIELDS!

EVERY ONE OF THE "BIG 3" INDUSTRIES

TV-Radio-Electronics . . . Auto Mechanics & Diesel . . . Air Conditioning-Refrigeration-Electrical Appliances . . . all are growing at a tremendous pace. No wonder you have steady work, at high pay, year after year, when you are a Master Technician in any one of these "Big 3" fields. You can really go places in your own business or with a manufacturer, dealer or distributor.

YOU ARE NEEDED . . .

to help service, maintain and repair the millions of TV sets, radios and electronic units . . . cars, trucks and diesel engines . . . air conditioners, household and commercial refrigerators, electrical appliances, etc., now in operation, *plus* the millions more that are being manufactured each year.

N.T.S. Trains You RIGHT, FAST and EASY!

Incomplete, "Short-cut" training limits your earning power, even disqualifies you for top-pay jobs. N.T.S. gives you *All-Phase*, complete training . . . to qualify you for any job in your field, *for greater profits all-year round.*

EARN AS YOU LEARN

We'll show you how you can earn money right from the start. Many students pay for their courses—and earn much more—while studying. So can you!

Your N.T.S. Training is BETTER... MORE COMPLETE...LOWER COST!

BETTER . . . proved and tested in Resident School shops and labs, by the OLDEST and LARGEST School of its kind in the world. Est. in 1905.

MORE COMPLETE . . . You learn All Phases, and you receive EVERYTHING YOU NEED—Lessons, Manuals, Diagrams, many Big Professional Kits with parts, tools, instruments for your experimental, repair and service, and trouble-shooting job projects. You also receive many valuable training "Extras" to assure your success.

LOWER COST . . . Other schools make several courses out of the material in each one of our MASTER COURSES . . . and charge you more for less training than you get in any one of our "Big 3" at ONE LOW TUITION!

SEND FOR YOUR **FREE** OPPORTUNITY BOOK AND ACTUAL LESSON **NOW!!!**

EARN WHILE YOU LEARN

NOTHING ELSE LIKE IT!

See How DeVry Tech Prepares You for a Good-Paying Career in

TELEVISION RADIO ELECTRONICS

Hundreds of men, 17 to 55, started to make money in the Electronics field before they even finished their DeVry Tech program. Many made the training pay for itself as they learned! Because DeVry Tech's program is so practical, YOU should be able to do the same. You work scores of projects; you learn by watching home training movies; you follow clear, step-by-step instructions. You really learn principles and master many skills. No wonder DeVry Tech men are found in so many real-pay, bright-future jobs in this great, growing field!

A BIG DeVRY EXTRA!

Build Your Own 6-Speaker Stereophonic & Hi-Fi Sound System

NOW, you may build and keep your own top quality High Fidelity 6-Speaker Stereophonic Sound System, as shown below. You Learn-By-Doing for a BETTER JOB or to ADD TO YOUR PRESENT INCOME. As a bonus, you and your family can enjoy the thrills of this marvelous sound system for years to come.

Special SHORT COURSE in High Fidelity Sound Reproduction including Stereophonic Systems also available. Ideal for hobbyists, music lovers and men seeking NEW OPPORTUNITY. Mail coupon.

GET A BETTER JOB OR BE BOSS OF YOUR OWN BUSINESS

NO ADVANCED EDUCATION OR PREVIOUS TECHNICAL EXPERIENCE NEEDED!

At home in your spare time, you use the same basic method followed by students in our Chicago and Toronto laboratories. You learn to use tools, follow diagrams, when you build any or all of this valuable equipment: the STEREO SYSTEM . . . or a 5-INCH OSCILLOSCOPE and VACUUM TUBE VOLTMETER . . . or a 21-inch TV SET. You have many choices! DeVry Tech's program is so thorough that you will likely be surprised at your progress. Send the coupon for details.

EMPLOYMENT SERVICE

Frequently, we simply don't have enough graduates available to fill all the jobs on our list. DeVry Tech has an Employment Service that really works. It is available to graduates without additional cost.

MILITARY SERVICE

If you are subject to military service, you will find the information we have for you very helpful. Mail the coupon today and get the facts.

GET TWO FREE Booklets!

"POCKET GUIDE TO REAL EARNINGS" and "ELECTRONICS AND YOU"

Real down-to-earth details are presented to help the man who wants to get ahead. Both booklets are yours FREE! Fill out coupon and mail today.

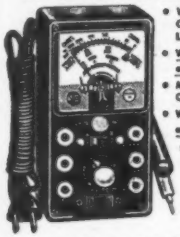
ONE OF THE BIGGEST OPPORTUNITY FIELDS OF THE CENTURY!

Superior's New Model 70 UTILITY TESTER®

FOR REPAIRING ALL ELECTRICAL APPLIANCES MOTORS • AUTOMOBILES • TV TUBES

As an electrical trouble shooter the Model 70:



- Will test Toasters, Irons, Broilers, Heating Pads, Clocks, Fans, Vacuum Cleaners, Refrigerators, Lamps, Fluorescents, Switches, Thermostats, etc.
- Will test all TV tubes for open filaments, interelement shorts, burned out tubes, etc.
- Measures A.C. and D.C. Voltages, A.C. and D.C. Current, Resistances, Leakage, etc.
- Will measure current consumption while the appliance under test is in operation.
- Incorporates a sensitive direct-reading resistance range which will measure all resistances commonly used in electrical appliances, motors, etc.
- Leakage detecting circuit will indicate continuity from zero ohms to 3 megohms (3,000,000 ohms).

As an Automotive Tester the Model 70 will test:

• Both 6 Volt and 12 Volt Storage Batteries • Generators • Starters • Distributors • Ignition Coils • Regulators • Relays • Circuit Breakers • Cigarette Lighters • Stop Lights • Condensers • Directional Signal Systems • All Lamps and Bulbs • Fuses • Heating Systems • Horns • Also will locate poor grounds, breaks in wiring, poor connections, etc.

Model 70 comes complete including 64 page book, only..... $15.95

SHIPPED ON APPROVAL

NO MONEY WITH ORDER—NO C.O.D.

Try it for 10 days before you buy. If completely satisfied then send $8.95 and pay balance at rate of $4.00 per month for 3 months — No Interest or Finance Charges Added! If not completely satisfied, return to us, no explanation necessary.

Shrinks Hemorrhoids New Way Without Surgery Stops Itch—Relieves Pain

For the first time science has found a new healing substance with the astonishing ability to shrink hemorrhoids and to relieve pain — without surgery.

In case after case, while gently relieving pain, actual reduction (shrinkage) took place.

Most amazing of all — results were so thorough that sufferers made astonishing statements like "Piles have ceased to be a problem!"

The secret is a new healing substance (Bio-Dyne®)—discovery of a world-famous research institute.

This substance is now available in *suppository* or *ointment form* under the name *Preparation H.®* Ask for it at all drug counters—money back guarantee. ®Reg. U.S. Pat. Off

You'll soon be happy in a great new job...

...earning BIG money...

...if you start training NOW for success in

AIR CONDITIONING AND REFRIGERATION

ONLY CTI SENDS PARTS AND TOOLS TO BUILD A CONDENSING UNIT!

You could be earning top pay in months. It's mostly a matter of getting your training now. Your best bet is to be a mechanic in the air conditioning and refrigeration field. This industry is growing so fast that *20,000 newly trained mechanics are needed each year.* Over 150 million units are in use; over 5 million new air conditioners, freezers and refrigerators are sold annually. Skilled men are desperately needed for installation and repair work. Be a mechanic! *Mail coupon for free success booklets on CTI's amazing new Home Training Plan.*

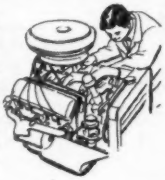
You can earn cash during your training

Because CTI training is so *practical,* you'll soon be making profitable service calls. Perhaps you'll work for your own. Or, you may prefer to get a part-time job with a local appliance dealer or air conditioning contractor. You can add to your present income this way. With extra cash, you can buy additional shop equipment, pay your tuition, even bank money.

You could go in business and be independent

Be a business—and enjoy independence! Thrill to the satisfaction of being the boss. Give orders—not take them! The refrigeration field is ideal for getting started on your own. You can make friends as you make service calls. In time, you'll have a list of potential customers. You can also sign service contracts with food stores, taverns, restaurants, etc. Ever so many CTI graduates have their own successful shops. Most of them began with nothing more than their new training and pluck. You, too, can start small and grow big. Be a business man!

You could get into the profitable new auto air conditioning field



Hundreds of thousands of new cars are being equipped with air conditioners. Auto dealers are advertising for skilled refrigeration mechanics, offering premium pay, to set up service departments. Or, you can go in business for yourself, and contract with auto agencies to do this type of installation and repair. You can make big profits either way.

You learn fast because you practice with real equipment—Get experience

You train at home in spare time. No need to give up your present job; no need to leave home to attend a resident school. *CTI sends 25 kits of parts and tools* to build a heavy-duty, commercial-type, ¼ h.p. refrigeration high-side (illustrated above.) You do 10 trouble-shooting and service jobs—it's almost like field training!

After assembling and working projects with your unit, you may build an air conditioner, refrigerator, freezer, or milk cooler. *All parts and tools are sent without extra charge*—they are yours to use and keep.

You get all these quality mechanic's tools

You get special "tools of the trade" as part of your training. Included is a pressure gauge, vacuum gauge and testing manifold. You'll use these tools to assemble and test the condensing unit. Thus, you get not just tools—*but equipment to practice with.* (Why settle for one without the other?)

You must look into your opportunities

Thousands of CTI graduates (and students) tell us they are getting better jobs, earning more money, working steady. Many are going in business. It is surprising how many report the best benefit of all is that they gained self-confidence. With so much at stake, can you afford to neglect *your* opportunities? Isn't it worth a few minutes of your time to *find out?* Just fill out and mail the handy coupon! Be sure to act today.

This is the home of CTI, one of the world's great home study schools. Through this Institute you receive "training you can trust." Over 40,000 career graduates from coast to coast.

KELSEY PRESSES, B-9 Meriden, Conn.

Don't Neglect Slipping FALSE TEETH

Do false teeth drop, slip or wobble when you talk, eat, laugh or sneeze? Don't be annoyed and embarrassed by such handicaps. FASTEETH, an **alkaline** (non-acid) powder to sprinkle on your plates, keeps false teeth more firmly set. Gives confident feeling of security and added comfort. No gummy, gooey, pasty taste or feeling. Get FASTEETH today at drug counters everywhere.

MEN PAST 40

Afflicted With Bladder Trouble, Pains in Back, Hips, Legs, Nervousness, Tiredness.

If you have these troubles, particularly bladder trouble, then your condition may be traced to Glandular Inflammation . . . a constitutional disease. Neglect of this condition often leads to premature old age and sometimes incurable malignancy.

The Excelsior Medical Clinic has a New Free Book that tells how thousands of men have been successfully treated here at Excelsior Springs for Glandular Inflammation by **NON-SURGICAL Methods.** They found soothing relief and a new outlook in the future of life.

This **Free Book** may prove of utmost importance in your life. Write Today. There is no obligation.

Excelsior Medical Clinic, Dept. B5129, Excelsior Spgs., Mo.

INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U. S. Patent Office and are prepared to serve you in the handling of your patent matters.

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without obligation upon request.

CLARENCE A. O'BRIEN & HARVEY JACOBSON

WASHINGTON 5, D. C.

Invention Clinic

Joseph H. Kraus

In this column each month Mr. Kraus will answer as many letters as space permits on those subjects he feels to be of widest general interest. Time does not allow him to reply to any letters except those printed here. Address your questions to the Invention Clinic, *Mechanix Illustrated*, 67 West 44 St., New York 36, N. Y.

Substitute For Ice

A. H. Santana of Baltimore, Md., writes: "It is over ten years since you invited me to exhibit at the Inventors International Exhibition in New York. I had some good breaks but due to business inexperience I lost out." He then outlines a system for producing an artificial skating ice. Is it any good?

It is too bad that the Inventors International Exhibition didn't become an annual activity. But it costs a lot of money to run these things, and it was our feeling that the inventor, who in a sense is the star of such a show, should not be required to pay for his performance. A show of that type needs a benefactor.

Your artificial ice: many inventors have worked along this line. No one has come anywhere close to producing a composition which will substitute for ice. Your material cuts too easily; try it and see. The experiment is inexpensive.

INVENTOR'S TIP OF THE MONTH

Much energy is dissipated when you stop a car. Gas and oil are wasted while the engine idles at stop lights or in heavy traffic, to say nothing about unproductive engine wear. Why not develop a system to store energy from the braking operation, and convert it into a quick start of the engine and also to impart initial forward motion. Then the engine would stop automatically when you brake and it would start up again instantly. Interlocking safety devices should be included.

Outboard Motor Carrier

R. J. Ponter of Arlington Heights, Ill., h an outboard motor carrier that would c $6.50 to manufacture. He is having trou getting this idea off the ground. Is he cater to too limited a market? Is the cost too hig Is there a need for a carrier for heav motors?

Anyone who expects to stay in busine must sell a product for about five times man facturing cost. Would you pay $25 to $32 f your carrier even though it appears to be ne simple and useful? You have a further lim tation in the market by the fact that wheel carriers are useless over sand, marsh, hi and rocks. I suggest that you check more co pletely into your manufacturing costs. As f heavier motors, most people who have th leave them on their boats. Except for leng your product seems strong enough for t heaviest motor. A bottom crossbrace mig strengthen the frame, provide a shaft for t wheels, and cut costs. With proper promoti and launching you should be able to put t idea across.

Easy Opening Envelope

Everett H. Yost of Douglas, Wyo., sends packet of envelopes with an opening stri affixed under the flap of each. Is it wor patenting?

This is one of the earliest patents issued b the U. S. Patent Office. Since then many di ferent versions have been protected, most to prevent the extended string or tab fro messing the mechanisms in mail-cancelli machinery.

[*Continued on page* 14]

INVENTORS

If you believe that you have an invention, you should find out how to protect it. The first step is to have a search made of the prior pertinent U. S. patents. If a report on this search indicates that the invention appears patentable you can apply for a patent, and the specifications and claims should be prepared.

The firm of McMorrow, Berman & Davidson, with offices in Washington, D. C., is qualified to take the necessary steps for you. We can make a preliminary search on your invention, advise you whether we think it can be patented, and prepare your application for patent.

Unless you are fully familiar with the U. S. Patent Laws, we recommend that you engage the services of a Registered Patent Attorney to protect your interests. The patent laws are *your* laws. A patent gives you the right to prevent others from making, using or selling the invention claimed in your patent for a period of 17 years.

Use these patent laws for your protection. Investigate whether your invention can be patented. If you have what you believe to be an invention, we suggest that you have this firm make a search for you.

Send for a copy of our Patent Booklet entitled "How To Protect Your Invention," containing information about patent protection and patent procedure. Along with this we will also send you an "Invention Record" form, for your use in writing down and sketching details of your invention. We will mail them promptly. No obligation. They are yours for the asking.

McMORROW, BERMAN & DAVIDSON

1397 VICTOR BUILDING, WASHINGTON 1, D. C.

Inventors

Take these necessary preliminary steps promptly to protect your invention by applying for a United States patent—

Sketch and describe your invention. Sign, date and have this disclosure witnessed by two people who understand your invention. Have us make a preliminary search among U. S. patents already granted for similar types of invention. We then report to you on the probable patentability of your invention and recommend your further course of action.

Write for our instructive booklet, "Patent Protection for Inventors" and our convenient "Evidence of Invention" disclosure form. No obligation.

[*Continued from page* 12]

Agricultural Devices

Arthur L. Fisher of Butler, Pa., sends copies of his patents on a system for keeping a grain combine level on hills to prevent spillage and also a means for automatically controlling the volume of air from a blower while the machine is moving at different speeds due to ground conditions. What manufacturer would be interested?

Both of these inventions appear to be good. How good they are in comparison with others remains to be established. As there are only 42 manufacturers of harvesters, and only nine of these with a capitalization of $1,000,000 or more, it might be well for you to write to each to learn their reactions.

Carbon Paper Problem

Larry A. Pocorena of Bakersfield, Calif., writes: "Apparently someone already has faced the carbon paper problem, as we have been using these forms for quite some time." He includes four of the forms.

Many organizations find it necessary to make as many as 12 or more copies. The forms you sent will not produce that number of readable copies, and they smudge. The problem is still there to be solved.

Fully Variable Transmission

S. L. Jenkins of Rolla, Mo., has designed a fully variable transmission which has a 100 per cent speed-power ratio. It is fully mechanical. Has such an idea been proposed before? If so, what was wrong with it?

It just is not possible to transmit 100 per cent of the power through any transmission system. At least 60 fully mechanical methods for producing a fully variable transmission have been patented. One of them was found on autos and trucks many years ago. It also included a variable speed reverse. But if you feel you have something worthwhile and marketable, I suggest that you get your attorney to report on a search. •

PATENTS GRANTED

FLASHING on and off or remaining constant, the battery-powered warning light, invented by Wayne S. Evans, Jr., of Huntingdon, Pa., for the tip of umbrellas, should hearten potential eye-jabbers everywhere on dark, rainy nights. Mr. Evans assigned the rights, patent 2,878,366, to S. W. Evans & Son of Philadelphia.

A gentle squeeze by Junior and the musical blocks invented by Mark Page of Great Neck, N. Y., produce a musical pitch on the scale. The blocks, designed as an educational toy for children, bear letters designating their tones. Mr. Page won patent 2,879,685.

Peter E. Holtsch of Wiesbaden, Germany, has devised a pushbutton machine that lights cigarettes by an electric coil and then partially ejects and holds the lighted smoke until the customer pulls it out of the machine. The lazy man's lighter took patent 2,878,960.

A trough where the hood usually meets the windshield is the secret of the windshield wiper invented by Bela Barenyi and Karl Wilfert of Germany. The windshield wiper is designed to do a more efficient clearing job, especially with snow which is carried off by the trough. The inventors got patent 2,880,444.

BIG PAY JOBS
for men who qualify in
DIESEL

TRAIN NOW FOR A DIESEL FUTURE. Steady, high-pay jobs await men qualified in Diesel, Tractor, and Heavy Equipment. Are you ready for job and advancement opportunities in this fast-growing field? You can qualify!

• *Shaggy Dog*

In the April MI on page 101 you had a picture of a cute dog. I would like to know four things about it. What kind of dog is it? How much does he cost? Where could I get a dog like that? Is that how big he will be the rest of his life?

(Miss) Dale Alexy
Chandler, Ariz.

In the words of an expert, "Hairy terriers that young are hard to tell apart, without documentation." And we have none—only the photo of a Mystery Pup. All we can say to you and the others who wrote in with the same requests is that if our daughter were to demand a dog "just like that," we would buy her a Cairn—on condition that her algebra shows improvement. She would never know the difference. We now turn you over to Dog World, 3323 Michigan Blvd., Chicago 16, Ill. That magazine is full of kennel ads. Price should be in the $35-$100 range. The dog will grow up but will retain that beseeching look.

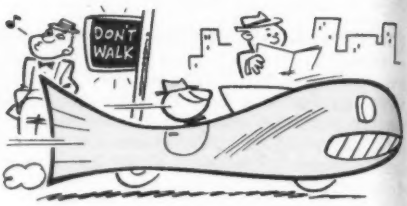
• *Words Of One Syllable*

Longest one-syllable word (number-of-letters-wise) in English is "strummed."

J.X.M.
Detroit, Mich.

Thank you.

• *Who's Laughing?*



If the SirVival (April MI) is put on the road it will not be a safety car. It would be a mass killer by causing people to die laughing.

John Bellamy
Muskegon, Mich.

If they can keep a straight face looking at the designs on the road today, Sir Vival wouldn't raise a smile.

• *Query*

I am 12 years old and my dad owns a '57 Plymouth and I want him to get a '59 Plymouth but he says he can't afford it. What can I do?

D.L.J.
Lancaster, Calif.

There are a number of possibilities, including threatening to hold your breath until you turn blue (not recommended as a long-term program). Best idea is to leave Uncle Tom's test of the '59 Plymouth around where Pop can see it. That might do it.

• *Attic In The Cellar*

I have been toying with the idea of a house which could sink into its own cellar in event of tornado warning. It might be raised and lowered by hydraulic lifts. In your opinion, is this idea an idea to end all ideas?

Mrs. L. M. Johnson
Mt. Jewett, Pa.

This is a well-known idea. Hitherto it has been suggested for skyscrapers, to eliminate elevators. Your application is perhaps sounder.

[*Continued on page* 19]

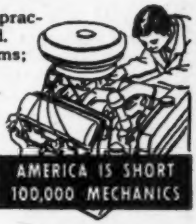
TAKE THIS *Short Cut* TO A *Good Job*

IN AUTO MECHANICS (AND DIESEL)

WHY AREN'T YOU AN AUTO MECHANIC?

No other industry makes it so easy for an ambitious man to gain success. Consider these advantages: The pay is excellent—up to $3 an hour and more. Work is steady—there are job openings for 100,000 men. Opportunities to go in business are abundant—America is short 25,000 repair shops. You can get ready for the big money—the bright future—in just a few months. *Mail coupon for free information on CTI's amazing Home Training Plan.*

CTI training is up-to-date, practical and easy to understand. You learn lubricating Systems; Power Brakes & Steering; Clutches; Automatic Transmission; etc. Only CTI offers you this extra choice: *At no extra cost, you also get instruction in Body and Fender Rebuilding or Diesel Mechanics.*



Get Experience Using Tune-Up Kit & Tools

(Included with training)

CTI sends you a Tune-Up Kit, the kind that skilled mechanics use to locate engine troubles. You receive a Compression Tester; Vacuum Gauge & Fuel Pump Tester; Ignition Timing Light; portable steel case. You also get mechanic's tools, including socket set. You acquire *experience* using kits.

EARN SPARE TIME DOLLARS AS YOU TRAIN

CTI Shop-Method training is so practical that many students fix cars soon after enrolling. Spare time profit pays tuition, buys shop equipment, helps meet living expenses. You can work on your own, or weekends in a repair shop. *Mail coupon today!*

COLLIAS LAWING COMPANY P. O. BOX 11012
CHARLOTTE 9, NORTH CAROLINA

Dear Editor

[*Continued from page* 16]

• *Correction*

In the March issue of MI (page 76) a caption states that Dr. Arthur Bryan is the inventor of the Airway he is supposedly demonstrating. Dr. Peter Safar and I did research work for the Surgeon-General of the U.S. Army concerning mouth-to-mouth resuscitation. As a result of this work we developed the "Airway" method, i.e., employing a tube through which the life-saver blows air into the lungs of the patient. We also developed a tube of special design for carrying out the Airway method and have filed applications for patents covering this development. These applications have been assigned to Johnson & Johnson, and they are presently marketing a tube of this design under the name "Resusitube."

Capt. Martin C. McMahon
Municipal Ambulance Service
Baltimore (Md.) Fire Dept.

• *Still More About Hiccups*

Several times I have had hiccups and every time I would start reading your article to find out how to cure them but every time I would get about half through and they would stop. Is there any way I could read it through?

D. B.
Columbus, Ind.

Speed up your reading.

• *Baby Ace Plans*

How can one get plans for the Baby Ace?

Walter L. Roberts
Landis, N. C.

One can have a stroke of luck and find copies of MI for May, June and July of 1955. Or The Experimental Aircraft Assn., 9711 W. Forest Park Drive, Hales Corners, Wis., will sell large-scale plans for $20.

• *Tasmanian Pen Pal*

I am 19 and my main hobbies are motor racing and color photography. I am writing to you in the hope of finding a pen friend interested in the same things and prepared to swap photos and programs of car races.

HOME ELECTRICITY WON'T COST A DIME!

SEMICONDUCTORS on roof of model home draw sun's energy into a tiny power system.

SUPPOSE you made electricity at home, and fed what you couldn't use into the power lines—and the power company paid you for it! That's the suggestion made by Dr. Lawrence J. Giacoletto, manager of the electronics department of the Ford Motor Company's Scientific Laboratory.

Here's how it would work: A bank of solar energy cells covering an average-size roof generates more power than the home can use. The direct current power drives a motor coupled to a 60-cycle alternator which is connected to power lines. Power fed into the lines is used for local industry or is moved into a distribution system that averages out power demands over large areas. At night the home draws power from the lines—power borrowed and returned all being recorded on the meter. You could end up making money on it—something new for homeowners. •

Check the Kind of Body YOU Want! RIGHT IN THE COUPON BELOW

...and I'll Show How EASILY You Can Have It!

Charles Atlas

Twice winner and holder of the title "The World's Most Perfectly Developed Man."

JUST tell me where you want it—and I'll add SOLID INCHES of powerful muscle SO FAST your friends will grow bug-eyed with wonder. I'LL SHOW HOW you can be a new man in just 15 minutes a day—in your own home—or it won't cost you a penny!

I myself used to be a 97-lb. weakling. Men called me "Skinny." Girls made fun of me. THEN I discovered my great new muscle-building system—"Dynamic Tension." It turned me into such a specimen of MANHOOD that today I hold the title "THE WORLD'S MOST PERFECTLY DEVELOPED MAN."

"Dynamic Tension" is the easy, NATURAL method you can practice in your own room—JUST 15 MINUTES A DAY—while your chest and shoulder muscles begin to swell . . . those arms and legs of yours bulge . . . and your whole body starts to feel "alive." full of zip and go!

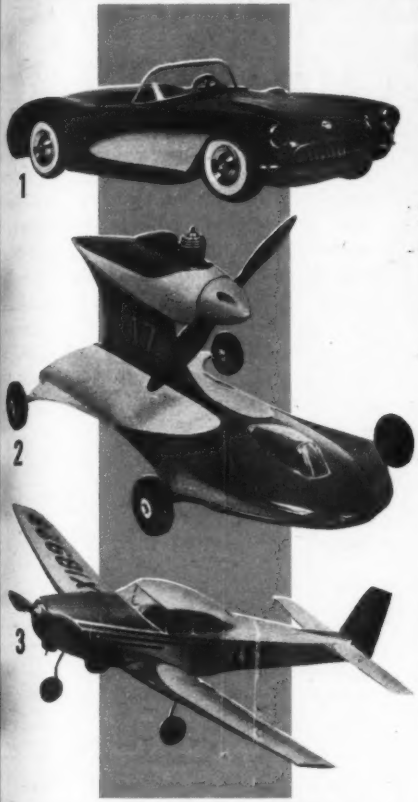
What's Your Plan, Man?

A limited number of full-size plans for these popular MI models are still available. Check off the plans you want on the coupon below. As always, it's first come, first serve—so mail in your order today and get in on the fun.



1. Here's an 18-inch scale model of the Chevrolet Corvette. It has a Fiberglas body, takes a .14 gas engine and will do about 40 mph. Real head and tail lights add to the realism.

2. Scamper is a powerful propeller-driven car or boat that will speed down a runway, at the end of a tether or over the water at speeds ranging from 20 to 40 mph. Length is 15 inches.

3. The North American Navion is a smooth-flying control-line model. It has a 36-inch wing span and takes a .19 to .49 engine. Plans include photos, material list and instructions.

Send 50¢ for each plan ordered to Mechanix Illustrated Plan Service, Fawcett Building, Greenwich, Connecticut.

Please send me the plans I have checked. I am enclosing the required amount.

- ☐ Corvette No. M-243
- ☐ Scamper No. M-242
- ☐ Navion No. 369

I am also enclosing 10¢ for your latest MI Plans Catalog containing pictures and descriptions of 132 plans. ☐

These Dramatized Stories Could Happen to You!

"He Made Me Fee Li Bride Again

IT'S hard to believe that a few weeks ago my husband was so nervous and irritable that I thought about leaving him! He was always "too tired" to do anything — to visit friends, go to the movies—too run-down to have fun with his family. We bickered and fought so much I thought our marriage was over. Our family doctor gave us some advice that probably saved our marriage. He explained that people who are otherwise healthy may become worn-out, tense and short-tempered because their diets do not contain enough vitamins and minerals.

Fortunately, we learned about the fo Vitasafe Plan through an ad in our paper and sent for the trial month's su that was offered. What a differen made! Vitasafe High-Potency Capsules helped my husband snap back with creased pep and energy. I'm so happ feel *like a bride* again! Perhaps som in your family feels tired and run-down cause of a nutritional deficiency. Why d you take advantage *right now* of this sational trial offer as we did?

25¢ *just to help cover shipping expenses of this* **FREE** 30 d supp

Do You Wonder What Makes You SO DARN TIRED?

I used to feel weak and run-down from morning 'til bedtime. Trying to be a good mother and wife when you barely have the strength to move would make any woman a nervous wreck! I was so cross and irritable I finally decided to see our family doctor.

After examining me, the doctor explained that my condition was due to a lack of important vitamins and minerals in my diet. I sent away for a trial supply of Vitasafe High-Potency Capsules that I had seen advertised. Now I feel like a new woman! If you are otherwise healthy, but feel tired, nervous and miserable, why not send for your trial supply today?

Photos posed by professional models.

Safe, Nutritional Formula Containing 27 Prove gredients: Glutamic Acid, Choline, Inositol, M onine, Citrus Bioflavonoid, 11 Vitamins (Incl Blood-Building B12 and Folic Acid) Plus 11 Mine

To prove to you the remarkable advantages Vitasafe Plan . . . we will send you, without c 30-day free supply of high-potency VITASAF CAPSULES so you can discover for yourself how stronger, happier and peppier you may feel afte days' trial! Just one of these capsules each day your body with over *twice* the minimum adult quirements of Vitamins A, C, and D . . . *five* minimum adult daily requirement of Vitamin B-1 *full concentration* recommended by the Food and tion Board of the National Research Council for th four important vitamins! Each capsule contains the ing Vitamin B-12 — one of the most remarkable science has yet discovered—a vitamin that actually strengthen your blood and nourish your body or

Glutamic Acid, an important protein derive natural wheat gluten, is also included in Vitasa sules. And to top off this exclusive formula, each now brings you an important dosage of Bioflavonoid. This formula is so complete it is nowhere else at this price!

WHY YOU MAY NEED THESE SAFE HIGH-POTENCY CAPSULES

As your own doctor will tell you, scientis discovered that not only is a daily minimum of and minerals, in one form or another, absolut spensable for proper health . . . but some people need *more* than the average daily requirements lished by the Food and Nutrition Board of the N Research Council. If you are a normally healthy but tire easily . . . if you work under pressure,

END SEWER-LINE ROOT MESS, SAVE ON COSTLY REPAIRS!

Roots are just naturally thirsty. They force their way through joints in your sewer line, eventually clog it. Toilets and sinks "back up", soon overflow. Now you can avoid costly digging or mechanical cleaning this easy, permanent way.

Pour one box of revolutionary Hercules R-D into toilet bowl. R-D kills and decomposes roots permanently, often overnight. To keep sewer lines root free, apply R-D twice a year. Safe to handle. Safe in septic tanks. Don't wait for trouble. Get R-D now from your plumbing or hardware dealer. It works, or your money back. Only $3.95 for 2 lb. box. Send for literature.

THE FISH LURE GUARANTEED TO CATCH FISH!

OR IT COSTS YOU NOTHING!

Works in Lakes, Ponds, Streams, Salt Water. Saves You Time, Work, Money and Disappointment. Perfect for Amateurs, Experts, Trollers, Casters, Shore Fishermen. Catches All Kinds of Fresh Water Game and Pan Fish Plus Salt Water Fish!

WORKS WHERE OTHER LURES FAIL!

What It Will Do for You:

- **CATCHES MORE FISH**
- **CATCHES ALMOST ALL KINDS OF FISH**
- **SAVES YOU MONEY ON OTHER PLUGS, BAIT AND LURES**
- **SAVES YOU WORK OF DIGGING WORMS, CATCHING MINNOWS, ETC.**
- **CATCHES THE FISH THAT WON'T BITE ON WORMS, BUGS, PLUGS, SPOONS, CANNED BAIT, FLIES, CUT BAIT OR SPINNERS!**

FROM PARIS, FRANCE, COMES NEWS OF AN AMAZING fish-catching lure. The world's first truly 'live action' lure that's guaranteed to catch more fish . . . catch bigger fish . . . and catch fish when everything else fails . . or it costs you nothing.

A Beautifully made lure that saves you hours of work digging worms, catching minnows or other live bait! . . . saves you the endless expense of continually buying expensive plugs, spinners, flies and other fancy equipment designed to catch YOU instead of fish . . . lets you make your fishing trips more fun, more exciting and lets you enjoy every minute you're fishing from dawn till dusk . . . with more and bigger catches.

A French Invention

The secret is a scientific 'live-action' tail that had never been patented before. Developed by a French sportsman who named it VIVIF, this wonder-working 'live-action' lure is the result of years of testing all kinds of lures on all kinds of fish...**and watching the fish react to each lure under water.** From these studies came VIVIF, the lure that works when everything else fails. VIVIF is now being used by over 350,000 fishermen in 25 countries who rave over VIVIF.

From all over come reports of record making catches . . . of fish biting where all other lures failed . . . of the sureness, the simplicity . . . the effectiveness of this miracle lure. Think what this means to you. Now at last you can catch every kind of fresh water game fish as well as salt water fish . . . and never spend a penny for fancy plugs, spinners or flies again. You can do away with digging for worms, catching bugs, frogs or minnows. You can cast, troll, shore fish . . . all with equal success. You can go out after . . . and **come back with** . . . bass, pike, pickerel, perch, bream, trout, walleyes, salmon, red tuna, striped bass, bluefish, weakfish, and do it time after time without any previous experience.

GET MORE FUN OUT OF FISHING

Here is a photo of a Frenchman who used VIVIF. The pike is 18½ pounds. In England VIVIF holds a world's record. In 25 foreign lands VIVIF is catching fish for delighted fishermen. Already reports from fishermen in this country are coming in . . . reports saying VIVIF is the greatest lure they ever used. 350,000 fishermen can't be wrong. Test the magic powers of VIVIF yourself **without risking a penny.** VIVIF takes the luck out of fishing, lets you have more fun out of fishing . . . because you catch more fish.

PHOTO PROOF!
Fish just can't resist the amazing VIVIF with its patented "Live-Action" tail! VIVIF caught this 40 lb. salmon for Mr. G. F. Coleman and 1st prize in a fishing contest.

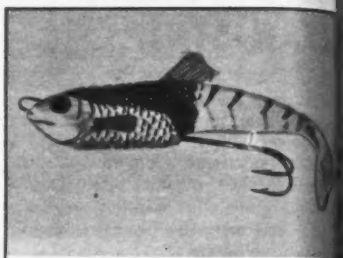
Marvel of Design

Not just another stiff plastic or wood lure that 'looks good' but doesn't work. VIVIF is made of life-like latex and is the world's most life-like lure in the water . . . works better than live bait! Color combinations have been scientifically selected by fish in actual tests. Acts and wiggles like a live minnow.

VIVIF IS IMPORTED SUPPLIES ARE STILL LIMITED

To get your VIVIF now, mail Free Trial Coupon at right. U.S. supplies are still very limited and are not yet sold in stores. Order now to be sure you'll have your VIVIF in time for your next fishing trip. Only if you act at once can we guarantee to fill your order immediately. Shipment of famous VIVIF is on its way from France. Don't delay. Mail Free Trial Coupon Today.

Each VIVIF is sent to you in a FREE clear-plastic container with Full Money Back Guarantee.



AMAZING VIVIF Is Flexible, Soft And Super Realistic. VIVIF is soft to the touch like a live minnow . . . wiggles like a live minnow . . . swims realistically in the water. VIVIF CONTINUES TO ACT LIKE A LIVE MINNOW EVEN ON A SLACKENED LINE.

Perfectly balanced, VIVIF casts beautifully with either bait casting or spinning equipment. Doesn't spin . . . can't twist your line. VIVIF WAS DESIGNED TO CATCH FISH . . . NOT FISHERMEN!

FREE TRIAL OFFER

MONEY BACK GUARANTEE!

No longer do you have to come home empty handed from your fishing trips. Avoid the costly mistake of using those "flashy" plastic and wood lures that 'look good' to you but fail to catch fish. Try amazing VIVIF . . . the French lure designed to attract and catch fish . . . without risking a penny.

All you do is mail the no-risk free trial coupon below. When you receive your VIVIF, use it **anywhere** you like . . . use it as **often as you wish** to prove its fantastic fish-catching powers.

See for yourself how VIVIF looks and acts in the water. See how easily it casts . . . how it moves through the water as realistically as a live minnow . . . even on a slackened line!

Put VIVIF to every test you don't agree it is the finest lure you've ever seen . . . if it doesn't catch more fish and bigger fish, you have used it entirely free, it won't cost you a penny.

Over 350,000 Amazing VIVIF'S New Catching Fish Through The World. Be The First In Your Area To Own One.

MAIL FREE TRIAL COUPON TODAY

Harrison Tackle Company, Dept. 7-MI

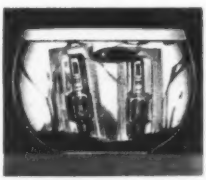
Even with one hand tied behind you...

You can install this Champion marine spark plug without danger of dropping the gasket!

Champion's attached gasket is perfect for changing spark plugs over the water. It's another reason for making plated marine Champions your choice for spares . . .

Champion's new *plated* marine spark plug has an attached gasket that cannot fall off—from the time you open the waterproof packs that keep these Champions clean, dry and ready for instant use, until they are firmly secured in your engine. (Without gaskets to make gas-tight seals around spark plugs, your engine would lose compression and power.)

Be sure your marine engine will always have the full-firing spark it needs for smooth, dependable power. For fun and safety, always carry a spare set of the world's finest marine spark plugs—*plated* Champions in the *waterproof* pack.



Only Champion has a *waterproof* pack. After 24 hours under water, these Champions went right in an outboard, sparked it to life on the first try.

Champion Spark Plug Co. Toledo 1, Ohio

SPARK PLUGS

YOU'RE A SAFER SKIPPER WITH A SPARE SET OF CHAMPION SPARK PLUG

Mail for McCahill

Uncle Tom is sorry he can't answer all his mail personally. In this column he'll answer the most interesting letters. Write to him at MECHANIX ILLUSTRATED, 67 West 44th St., New York 36, N. Y.

● *I've gotten all the plans and specifications together for the 1959 Cadillac and am thinking of building one myself. Do you think this would be a worthwhile project?*

Arthur K.
Charleston, S. C.

Sure.

● *I weigh a little over 300 pounds and drive about 40,000 miles a year, alone. After a few thousand miles the body of every car I've ever owned gets a set to the left, and some of my unfriendly friends kid me about this. Is there anything I can do to avoid this driver's side sag?*

Al T.
Chicago, Ill.

I assume you've heard of dieting and have found it unappealing. Aside from this, Air-Lifts on the driver's side, or even a shock adjustment, would help a lot. With these adjustments, however, your car may lean to the passenger side when you get out. Have you considered a fat friend to ride with you in the passenger seat?

● *What's the real lowdown on economy cars? Is it the mpg you get, the depreciation, or what should a guy look for in an economy rig that will prove really important?*

Frank Carrick
Indianapolis, Ind.

The real economy pitch is based on several factors. One is the total number of miles the car is to be driven each year. Second (and more important by far), is how much can you get for the car on a quick emergency sale, one, two or three years after purchase? Between two makes of automobiles, both selling originally for $3,500, resale value in 18 months may show a difference of as much as $500. It takes a helluva lot of gas savings to make up that much. Depreciation is the Number One economy factor every buyer should keep in mind.

● *I personally think your column is as informative as an encyclopedia. Your reader,*

Saul Sklar
Jericho, L. I., N. Y.

Thanks, pal. So *you're* the one!

● *Saw a picture of a General Motors car that costs $8,000. The caption said they make only a few of these cars and that they sold one of them to Frank Sinatra. What's the jazz on this car?*

Chuck Moneagle
Union, N. Y.

Last we heard, The Tonsil was driving a Dual-Ghia convertible.

● *I have a problem. I've got a Model A Ford (1928) and my dad wants me to restore it to its natural condition, if possible. However, I want to make a roadster out of it. Shall I make my dad happy or should I make myself and my teenage friends happy?*

Bill Mattos
San Jose, Calif.

Trade it in on a new one and make everybody happy.

● *I was delighted to read your able reply to Senator Neuberger in the February MI. I thoroughly agree with the conclusions reached and the reasoning behind them. I am firmly of the opinion, however, that all the safe cars produced cannot neutralize the devastating results of the mildly and very drunk drivers that roam our highways. Education and laws will have to be improved on that score.*

Robert E. Bolton, M.D.
Wenatchee, Wash.

Thanks, Doc. The drunken driver situation, I'm afraid, will never be solved by education. There may be an answer but if there is I sure don't know it. I personally can think

of a half dozen friends who are solid citizens in every way until they get to the local country club on Saturday night for their weekly parboiling. When they reach the dangerous stage, even the guy who's the sanest man in the community when sober is "Jesh shure 'ri can be I c'n drive OK." If you try to intercede you've got a fight on your hands, so nine times out of ten you cross your fingers and hope he makes it. He usually does—but some don't.

When a man reaches a certain state of booziness, laws don't have the slightest meaning to him. In my opinion, the safest drinking driver is the real alcoholic who stays at a fairly constant level around the clock. I know one or two of these who, under the circumstances outlined above, haul to the side of the road and sleep it off, or sleep it off in the club parking lot. The real alcoholic is a better judge of his driving ability at any time than the once-a-week tiger who thinks if one for the road is good, three would be better.

● *You're really cut out for drama, you know. I can tell by that photo of you talking to Mauri Rose in the February issue. You look like an inflated Marlon Brando topped with a touch of Yul Brynner. I have two questions, Killer—are you cross-eyed?*

J. J. Johnson
Houston, Texas

I just asked Mom and she says that is three questions, so you're disqualified.

● *My wife and I are planning a vacation trip through Texas to the Grand Canyon this September. Our car is a 1957 Ford convertible. We would like to have your opinion as to what mechanical adjustments should be made before attempting a trip through high altitude areas and desert heat. We are concerned primarily with the problem of engine overheating.*

Henry C. Potts III
Caldwell, N. J.

If your car is in tip-top shape there is no reason why it should need any extra "adjustments." However, in fighting real desert heat it's wise to make sure the pressure radiator cap is up to snuff, the fan belt in good shape and the radiator core clean. Also, make sure you have an adequate supply of water aboard, not only for drinking but to replace any lost through a possible engine boil-off. I came close to getting it one time in Death Valley in June with no extra water.

● *I am not at all familiar with television procedure but I for one would love to get away from some of the Westerns and feel*

[*Continued on page* 46]

Ever wanted to design your own car? Chevrolet lets you come awfully close—with a choice of nine engines, five transmissions, two suspension systems, regular or Positraction rear axles, special cams, solid or hydraulic valve lifters, two air-conditioning systems, even Fuel Injection. You name it, chances are Chevy has it. Here's an example of what we mean.

"I 'built' my Chevy as a magic carpet . . . with a pure-silk cruise."

"When I sold my business and retired I knew exactly what I wanted to do: slide behind the wheel of a big long-legged car and spend a solid year seeing the U.S.A.

"And I knew exactly the car I wanted, too, after an evening studying Chevy's all-out list of options. Here's my own recipe for the ideal cross-country automobile:

"An Impala convertible; the Turboglide transmission* (so *completely* automatic it takes the strain out of strange big-city traffic); and that whopping 348-cubic-inch Turbo-Thrust V8* (for the quietest pure-silk cruising I've ever felt in *any* car).

"Just to make it a real magic carpet I added power steering*, power brakes* and that six-way power seat*. Say, I'd pay double for that; on a long stretch you change positions a couple of times and you just don't get leg cramps or tired shoulder muscles! One thing I can tell you after putting 20,000 miles on my Impala, I'm tickled pink with the car Chevy let me design for myself—there's just nothing like it!"

Well, that's the reason behind Chevrolet's terrific range of options—nothing's quite so satisfying as a car "tailor-made" to your needs. And we're darn sure that, whatever you want, there's a Chevy to fit your dreams. Try us and see. . . . Chevrolet Division of General Motors, Detroit 2, Michigan.

CHEVROLET

**Optional at extra cost.*

[Continued from page 44]

a program called "McCahill Tests" would go over big. I am a female but enjoy your magazine more than any published. I can truthfully say the only magazine I even venture to read cover-to-cover is MI. My husband and myself would be ardent watchers of a TV program with Tom McCahill in it.

Mrs. Wm. W. Campbell
Fairfield, Calif.

Have been approached on this many times by many different agents, to no avail. I'm afraid TV is the one place where the horse outranks the car. But thanks for the plug.

● *We have a '58 Buick station wagon that we use for camping. We'd like to have some simply-installed draw curtains so we can sleep in the car. Is there any company that makes rods similar to those for draw-drapes that could be fastened on the car? We would like the curtains to cover both the windshield and rear windows, as well as the side windows.*

Don Jorgenson
Cedar Falls, Iowa

Any interior decorating outfit or good boat-yard could rig you up in a hurry—but it m[illegible] be real tough on your driving.

● *Which would you rather have as an o[illegible] car if there were just you and your w[illegible] —a new Rambler American, Studie Lark [illegible] MG Magnette?*

Wally Harris
Orangeville, Ca[illegible]

If there were just me and my wife, I'd [illegible] by boat.

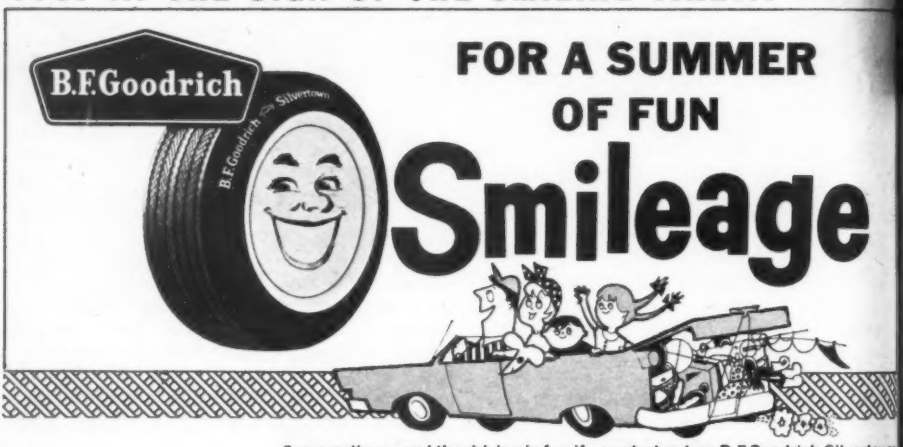
● *To settle an argument—what is "timing" in an engine? Some say it's when the spark goes off. I've also heard it claim[illegible] that it refers to the position of the valve[illegible] Straighten us out, please.*

PFC Ted R. Free[illegible]
APO, N. Y.

You heard right on both counts becau[illegible] there are two kinds of timing in an engine—spark timing and valve timing. Correct spar[illegible] timing (controlled by the position of the distributor) means a spark will occur at just the right instant—usually a few degrees in advance of top dead center—and will take place

[Continued on next page]

STOP AT THE SIGN OF THE SMILING TIRE...



Summertime—and the driving is fun if you start out on B.F.Goodrich Silvertowns.

Drive worry-free on new B.F.Goodrich Silvertowns! Inventors of the tubeless tire built them, gave them tougher tests than any fast-moving vacationer could. Get Smileage now. Forget tire worries with the quality tires automakers choose for new cars year after year. 4 tires, only $4 down.

Look for your B.F.Goodrich Smileage dealer in the Yellow Pages. The B.F.Goodrich Co., Akron, Ohio.

B.F.Goodrich ***Smileage dealers***

How to tune up your car without tools

1 Use some clean rags and a bottle of non-flammable household cleaning fluid to remove every speck of dirt and grease from exposed ignition wiring, spark coil, condenser, distributor, battery top and spark plugs. This will cut down electrical "leakage" and give you a more potent spark for increased pep and gas mileage.

2 Clean out carbon and combustion deposits from engine's upper cylinder area with a series of full-throttle accelerations. Do it this way: Find a stretch of lightly traveled road and brake to a stop with your engine idling. Now put 'er in gear and accelerate to the legal speed limit as fast as you can — with the gas pedal pushed down to the floorboard. Gently brake to a stop and repeat six times.

3 Take a 100-mile round-trip drive on open roads where you can drive at legal speed without constant stop-and-go. This will "boil away" liquid contaminants that get into your motor oil between 1,000-mile changes — and improve your engine's lively "feel."

4 Make it a habit to use the *only* gasolines specially blended for *your* climate and altitude *wherever* you drive . . . Texaco Sky Chief Su-preme with Petrox, or regular-price Fire Chief. You get superior performance with these gasolines because their formulas are changed every month of the year in every one of 26 climate areas in the United States. Yet, they cost no more than other "premium-grade" and "regular" gasolines!

OUR FIRST CENTURY BORN IN FREEDOM WORKING FOR PROGRESS

Buy the best . . . buy TEXACO

TEXACO

This 60-second test can revolutionize your entire future!

● **The Bowes "Seal Fast" Corporation has carefully developed this test to help them select qualified men for their distributorships!**

	Yes	No
1. Are you between 35 and 45 years old?	☐	☐
2. Have you an education beyond 8th grade graduation?	☐	☐
3. Are you married?	☐	☐
4. Do you have 3 children or less?	☐	☐
5. Do you own (or are you buying) a home?	☐	☐
6. Have you lived at present address 2 years or longer?	☐	☐
7. Were you at your previous address 2 years or longer?	☐	☐
8. Have you a telephone at home or at your place of business?	☐	☐
9. Is your car at least 3 years old?	☐	☐
10. Do you belong to a church, lodge, club, YMCA, veterans' or civic organization?	☐	☐
11. Have you been on your present job at least 2 years?	☐	☐
12. Were you raised in a town with less than 50,000 population?	☐	☐

Now—count the "yes" answers. If you have 8 or more, you may be on your way to being your own boss.

Everybody respects a man who is his own boss. And they notice his family lives a little better than most. Perhaps you've thought about running your own business too but put off doing anything about it because you didn't have any idea about how or where to start. You probably asked yourself: If I do start my own business, what would I be best at? A hardware store? A restaurant? A filling station? Certainly you wondered if you could raise the money, and how much it would take—$10,000? $20,000? $50,000?

For people like you who have seriously thought about running their own business, the Bowes "Seal Fast" Corporation has prepared a booklet with most of the answers to these questions. We call it. "So You Want To Be Your Own Boss!" In it a number of different small businesses you might be interested in are described and compared as to work, investment and possible profits.

This booklet also tells why Bowes is now offering a few men a chance to become automotive distributors selling to service stations in protected territories.

If you're not afraid of hard work and can make an investment of about $8,500 in a truck and stock, you may get a chance to become one of these distributors. If Bowes picks you, you will be thoroughly trained until you are well on your way to a solid, gamble-proof income.

Clip the coupon below and send it in now for your free copy of our booklet, "So You Want To Be Your Own Boss!"

Bowes Distributors throughout the country are part of a multi-million dollar operation. They represent a firm which in 40 years has grown to be one of the largest of its kind, with plants in London, England; Hamilton, Ontario; Riverside, California, and Indianapolis. Its credit rating is the highest (AAA-1) available.

DON'T DO-ITS

How to make your diploma pay off in Military Service

Published especially for high school graduates and seniors

Just off the presses! A valuable 48-page booklet titled *The Secret of Getting Ahead*. This free booklet explains all about the special Army opportunities open to high school graduates—shows you how to make your diploma pay off in military service!

Learn how you can choose technical schooling before enlistment

The Secret of Getting Ahead includes the complete Graduate Specialist story—all the facts about the Army educational program for high school graduates and seniors *only*. If you meet Graduate Specialist qualifications, you'll be able to choose technical schooling *before* enlistment. This booklet describes each of 107 Graduate Specialist courses—gives you details about up-to-the-minute training in Electronics, Atomic Weapons, Radar & Television Repair, Machine Accounting, Guided Missiles, Drafting and many more.

Do you know the answers to these important questions?

What are the qualifications for the Graduate Specialist Program? How can a high school senior gain by applying *before* and enlisting *after* graduation? Does Army schooling have civilian value? What are Army schools like? What is the "secret" that increases your chances for success when you make *any* decision? *The Secret of Getting Ahead* answers all these questions—and many others. What's more, the booklet contains vital information about Selective Service and Army Reserve—important facts every draft-eligible young man *should know*.

Here's the fastest way to get your free copy

To get your free copy of *The Secret of Getting Ahead* in the quickest possible way—stop by your local Army recruiting station. There's *no* obligation. No recruiting station in your area? Then use the coupon to order your free copy direct from Washington. It'll be mailed to you immediately—without obligation.

It's Coming!

New miracles of science that you'll be seeing soon.

MISERABLE red-nosed sneezers and sniffers afflicted with a common cold may soon be able to obtain relief via a vaccine now being developed, according to Dr. Thomas G. Ward, virologist at the University of Notre Dame. The vaccine, says Dr. Thomas, "will prevent in the area of 60 to 70 per cent of the common colds."

Green tinted highways with yellow dividing lines which would be more restful and prevent glare might be one way to reduce the number of traffic accidents on highways, according to Dr. Alden N. Haffner, executive director of the Optometric Center in New York City. The black and white now used on highways causes glare which markedly hampers a driver's vision, says Dr. Haffner.

The oven of the future may be a portable aluminum sphere designed for use wherever needed—at your dinner table or on your patio. The oven's heat source could be the conventional electric unit or less conventional sources such as infrared or quartz light, solar, ultrasonic or induced heat. The oven was designed by Greta Magnusson Grossman for the Aluminum Co. of America.

Throwaway bathing suits developed by the chemical industry for one-time use may be worn by in-the-swim enthusiasts of the future, according to Dr. L. Shailer, Jr., of the B. F. Goodrich Chemical Co.

No-hangover synthetic whiskey may be on the way for imbibers who like to take their nips in large and frequent intervals. The synthetic liquor would have the same taste, aroma and punch as the real stuff but lack the two chemicals that cause headaches, according to Dr. Robert Carroll, chemical consultant of Greenwich, Conn.

The Atomic Energy Commission is working on the development of a low-cost radiation detection instrument that will fit into transistor radios. The personal safety device could be used in the event of nuclear war or in private industry.

Library machines that will not only find references, but read the books for you and teach you from their contents, were predicted by Calvin N. Mooers of the Zator Co. of Cambridge, Mass., who foresees such library machines in use within 20 years.

A nuclear-fueled electric power plant has been designed to take man into space in huge interplanetary space vehicles. The power source would weigh about 60 tons and could supply 20,000 kilowatts of electricity. Scientists at the National Aeronautics and Space Administration's Lewis Research Center designed the powerplant, which would have a full-life powerlife of about two years.

Completely bone-free fish fillets may soon be available to the housewife. An automatic detector-rejector device, which will spot bone-bearing fillets and eject them from the packing conveyor lane, is being perfected by Barkley and Dexter Laboratories of Fitchburg, Mass.

The world's first atomic cargo submarine, a 50,000-ton, 600-ft. boat, will be built by the Mitchell Engineering Organization of England. The boat, nicknamed Moby Dick, will be able to travel under the ice into Canada's Hudson Bay all year. It will cost about $54,000,000.

Advanced warning of heart troubles may be foretold one day by FM broadcasts of heart sounds inaudible to the human ear. A special microphone is placed over the heart and picks up the various vibrations made by that organ. Researchers at the University of California Medical School and Los Angeles Veterans Administration are developing the electronic device.

A cheap, solid-fuel plastic rocket that could be fired daily by Weather Bureau personnel in large cities in order to provide more accurate weather forecasts, was recently foreseen by the successful firings of the ARCAS (All-purpose Rocket for Collecting Atmospheric Soundings). Two men would launch the missile which would explode harmlessly once the desired information had been received. •

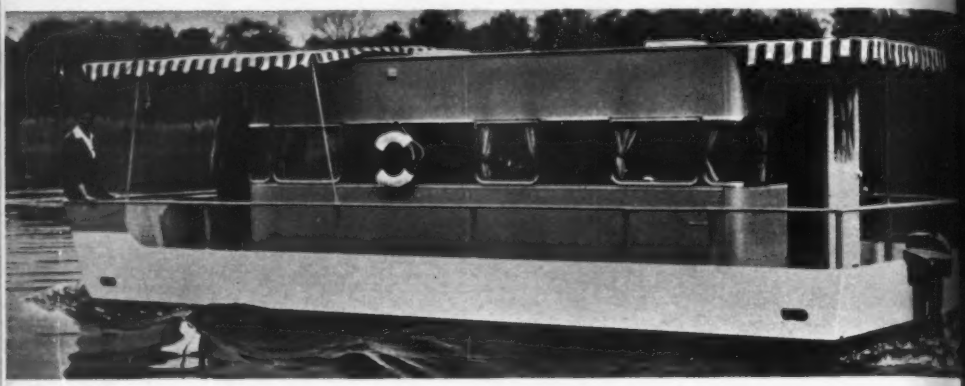
The Fun of Houseboating

A typical houseboat sleeps four to six people and there are dozens of models to choose from.

By George Laycock

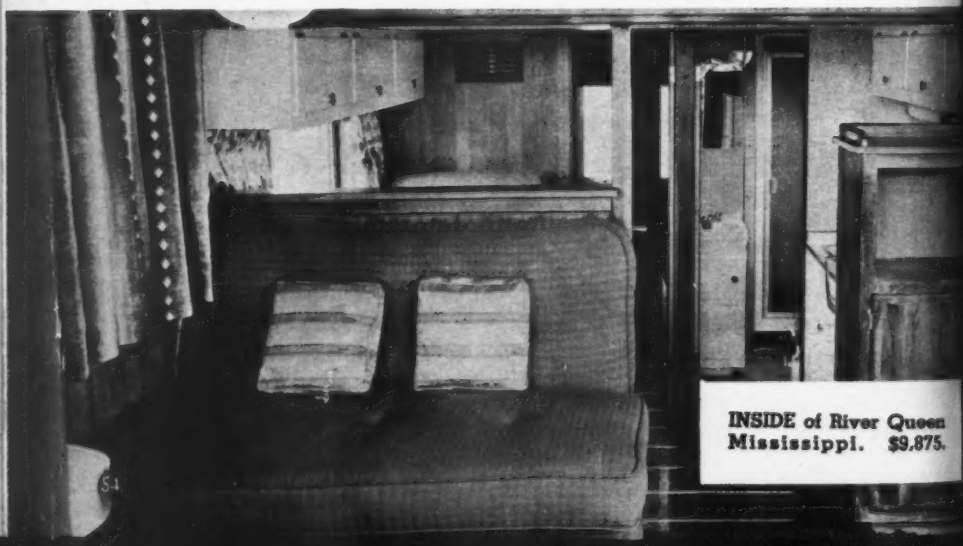


FLAT-AFLOAT is an English-built catamaran-type houseboat selling in New York for $3,675.

HOUSEBOATS are floating down rivers and peacefully gliding on lakes throughout the land. The fun of being on the water in a boat that offers comfortable living quarters and plenty of elbow room is making a strong impression on a growing number of vacationers.

Ten years ago you would have had trouble finding a single houseboat manufacturer. Today there are dozens of them. One reason for the growing popularity of these cruising cottages is that the houseboater lives so comfortably. A

HOLIDAY HOUSEBOAT, on preceding page, is made by Richland Mfg. Co. Price: $6,800.



INSIDE of River Queen Mississippi. $9,875.

MARIENETTE by Falls City Flying Service is 28 ft. long, aluminum, sleeps four. $5,695.

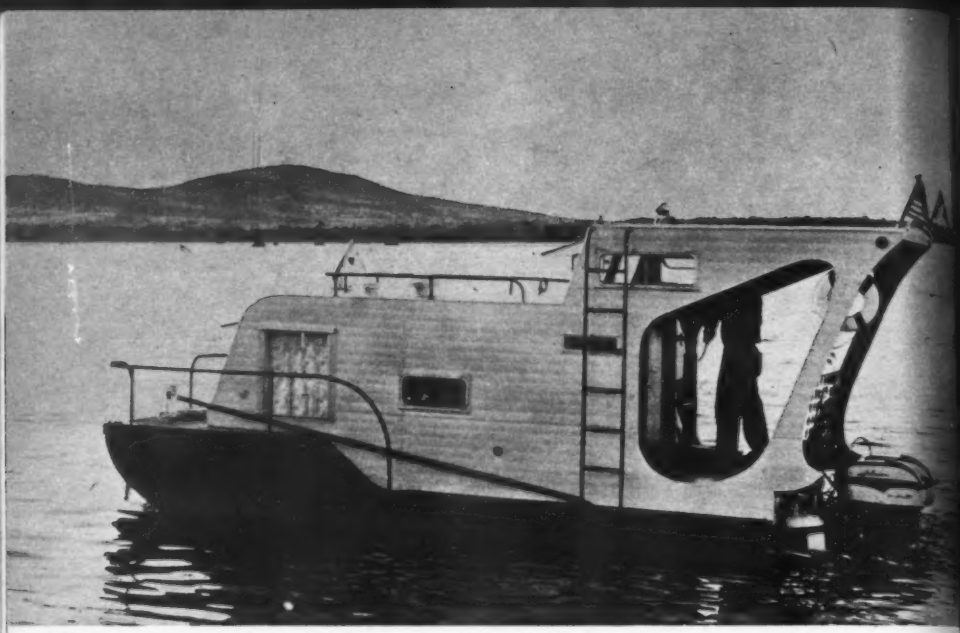
typical houseboat sleeps four to six people. It has a kitchenette complete with sink, refrigerator, running water, alcohol stove and storage space for dishes, silverware, cooking utensils and pans.

There are marine-type toilets and adequate closets. The dinette area, often built around a picture window, converts into sleeping space. These are usually basic features. Depending on your tastes and pocketbook you can add almost anything to this list ranging from TV sets and built-in bars to guest staterooms.

One 35-ft. luxury style houseboat, offered by an Indiana builder at $6,500, sleeps six and comes with a fiber glass-insulated cabin, mahogany paneling,

MARINE TRAVELER by Modernette Mobile Marine is 20-footer, has steel hull. $2,295.

MISSISSIPPI BELL has well-planned, roomy interior. By Dubuque Boat and Boiler Co.



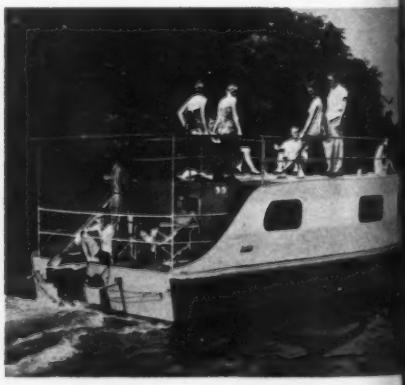
MOBILE DUCK is a combination houseboat and trailer that sleeps four. From Har-Mac Inc.

four cubic-foot gas refrigerator, apartment-size deluxe range, gas water heater, marine toilet, shower, lavatory, furnace and both gas and electric lights. The control panel and wheel are in the front of the cabin so the skipper can spend his time with guest or family while piloting his boat. The same builder sells a 20-ft. model for $2,295.

It's obvious that the modern houseboat offers more comforts than cruisers of the same size. They're probably the biggest dollar value of any class of boats available today. The barge-type construction of the hulls keeps costs down. Houseboats now on the market range in price from less than $2,000 to more than $35,000, with the average selling in the vicinity of $3,000, without power.

This is relaxed boating. You take your pleasure in the going instead of the getting there. Houseboats are slow com-

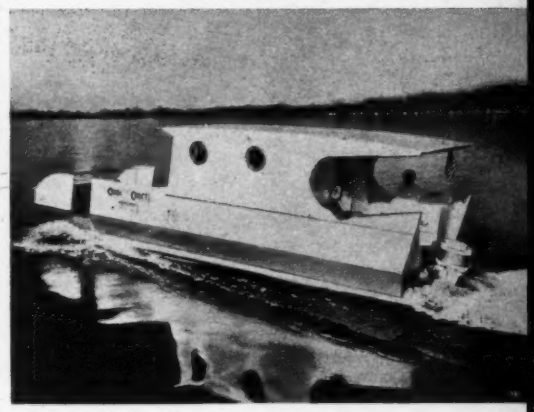
MOORE CORP. 30-footer features sun deck.



SUNLINER, Dreamboat Mfg. Co., is $3,795.

Houseboating is ideal for family outings for an afternoon or one of those long summer weekends.

RIVER QUEEN Swanee, 24 ft., and Ohio, 32.



CARRI-CRAFT, fully equipped, is $2,780.

pared with runabouts or cruisers. Some claim speeds up to 18 mph but the average is much closer to eight.

One Midwest family took a ten-day river houseboat trip and covered 450 miles, only 45 miles a day. "We watched the hills go by," they said, "and had fun going through locks and seeing the big river boats. When we wanted we would stop to fish, swim or visit a town. At night we tied up to a tree on the bank. There was always something to do or see."

Houseboating is ideal for family outings for a day, a week or one of those long weekend vacations which are becoming increasingly popular. Houseboats also make excellent craft for fishing parties or as base headquarters for duck hunters. The shallow draft boat enables you to get into coves and other good fishing spots.

The average houseboat measures about 25 ft. long by eight ft. wide but you can get one from 15 to 50 ft. in length. The hull may be wood, steel or aluminum. Steel hulls are the most rugged and can be beached practically any place without fear of damaging the boat.

Practically all makes of houseboats offer deck space for lounging. Many of them have front decks where you can drowse in deck chairs or survey the landscape. Decks on top of the cabins are also popular for sunbathing.

Houseboats are powered by either outboard or inboard engines; some are equipped for both kinds of power. The outboard is usually a 30 or 35-hp job equipped for remote starting and steering.

Trailer manufacturers have taken a close look at the houseboat business because houseboats and trailers are much alike on the inside. Some of them make combination land cruising-houseboats with retractable wheels. One of these, built on pontoons, sells at $2,780. It is 30 ft. and cruises at 13 mph with a 58-hp outboard. An eight-ft. beam is the legal highway limit in nearly all states. [*Continued on page* 168]

HOUSEBOAT MANUFACTURERS

You can obtain a list of houseboat manufacturers and their addresses by sending a self-addressed, stamped envelope to the Information Dept., Mechanix Illustrated, 67 West 44th Street, New York 36, N. Y.

$700 RIG has no costly aircraft parts, only commercially available components. It could be sold for only $1,500.

COPTER COSTS LESS THAN A CAR

EVERETT J. MORRISSETTE of Somers, Conn., pilot, engineer and former airport owner, has built a helicopter powered by a 40-hp Mercury outboard that could be mass-produced for $1,000, sold for $1,500. Or, Morrissette suggests, you could buy plans and build your own—as soon as the chopper gets its FAA certificate. Craft has auto-rotation—which means it comes down slowly if the motor conks out. The 250-lb. craft has a two-hour range.

GRAVITY-FEED tank is on shaft under rotor. At left: radiator to water-cool motor.

EASY FIT: rotor lashed, Mosquito slides easily in between family car, workbench.

Now See This!

CALLING all hams! A wedge of light on the translucent Great Circle map indicator tells you when your Hy-Gain Roto-Brake, a new antenna rotating assembly, has turned your antenna in the proper direction. The 16-in. diameter Tenite plastic indicator can be wall-hung or mounted on the control table. The antenna withstands up to 100-mph winds. •

Hy-Gain Antenna Prod. Corp., 1135 N. 22nd St., Lincoln, Neb.

YOU can look and listen with this tiny transistorized combination radio and rear view mirror designed to appease the vanity of women motorists. The unusual portable is called the Vanguard and was developed by the Voxson-Faret Co. of Rome, Italy. The lady-pleasing accessory can also be taken from its mirror niche and carried for a midnight stroll or used on the beach both as a radio and vanity. What will they think of next! •

BUMBLEBEE enthusiasts can now assemble their own scale insect, eight times its normal size. The newest hobby kit in Ideal Toys' earth-science series is made of styrene plastic and comes in 44 pieces. Easy to assemble, it has transparent wings and a simulated plush body covering the dorsal surface. The model is 9½ inches long. Price: $1.30. •

Ideal Toy Corp., 200 5th Ave., N. Y. 10, N. Y.

MONOXOR is a pocket-size device for the detection and direct percentage measurement of carbon monoxide. The mechanically-operated device indicates the CO percentage by measurement of the length of a stain developed in an indicating tube. The CO test is made by depressing, then releasing the pushbutton of the sampling pump, thus drawing a controlled sample through a replaceable indicating tube. It can be used in home, shop, etc. •

Bacharach Industrial Instrument Co., 200 N. Braddock Ave., Pittsburgh 8, Pa.

Can Mind-Reading End Wars?

By Lester David

Here is an exciting plan to use ESP (extra-sensory perception) to insure peace for the entire world!

THE decision was made.

The silent, cold-eyed men, meeting in fateful session, chose the day and hour when a nuclear missile would be hurled at the capital of the United States.

These final plans were drawn up deep within the enemy's walled-in nerve center, thousands of miles from the U.S., under the most rigid security precautions. The soundproofed chamber bristled with traps and alarms, was guarded by three platoons of picked men.

Nevertheless, five minutes after the zero hour was set, the President of the United States was being briefed on all details! He was hearing them from men who saw and heard exactly what went on in the secret chamber through the powers of ESP—extra-sensory perception.

Swiftly, America went into action. A warning was cabled to the head of the enemy state that the plans were known to us—and that if the stab-in-the-back was carried out, nuclear weapons would destroy five of his major cities in retaliation.

The attack was never made.

You can be forgiven for looking upon the foregoing as a television producer's dream—but the truth is even more startling:

Dr. J. B. Rhine, head of the famous Parapsychology Laboratory at Duke University, is convinced the time has finally come for an all-out effort to discover how to control and use ESP as a defense weapon!

Therefore, Dr. Rhine, who is recognized as one of the world's authorities in the field of psychic phenomena, makes this astounding proposal to those concerned with the peace of the world:

Allocate funds so that an immediate and intensive research program can be undertaken to seek a way to bring this force under the conscious control of man. If this can be done, says Dr. Rhine, secrecy would be destroyed and the surprise attack could be defeated before it began.

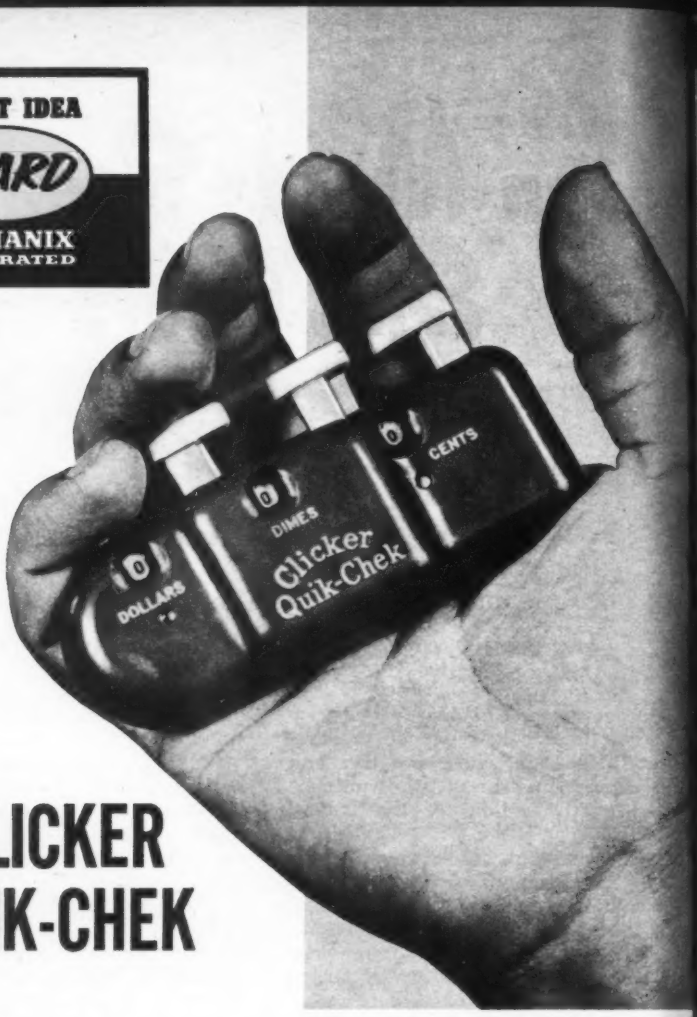
ESP is the mysterious ability of the human mind to see and know things directly without the use of any of the sense organs. A person gifted with the power can receive thoughts, feelings or impressions without employing the accepted channels of communications such as sight, sound or touch.

Hundreds of laboratory tests have shown that [*Continued on page* 163]

BRIGHT IDEA

AWARD

MECHANIX ILLUSTRATED



CLICKER QUIK-CHEK

ARE you a frightened victim of check-out embarrassment—you rack up $20 worth of groceries at the supermarket and then discover you have only $18.13 in your pocket? If you are, then the plastic Clicker Quik-Chek is for you. It's a pocket-size adding machine with three buttons that total up to $20. It's perfect to keep a running tally of how much you have to shell out. Quik-Chek will be a blessing for misers who hate to part with a buck or for the truly budget-minded. It is also handy for scoring contests, counting calories or teaching the kids how to count. The price is $2. The Lighthouse, Inc., Plymouth, Mass. •

POCKET-SIZE adding machine adds up to $20. It assists budget-minded and reminds Mom that Pop won't be paid for a week.

WIN $50

MI will award $50 each month to the first person who tells us of a new and useful gadget that is patented and in production. Manufacturers are also eligible for this award. Pictures and a description should be sent to Bright Ideas Editor, Mechanix Illustrated, 67 West 44th Street, New York 36, N. Y.

65 Days in the Air

GAS was pumped from speeding supply truck into the plane's 80-gallon belly tank.

SIXTY-FIVE days is a long time to be up in the air but fliers Robert Timm and John Cook of Las Vegas, Nev., hung on and shattered the old endurance mark of 50 days and 16 minutes.

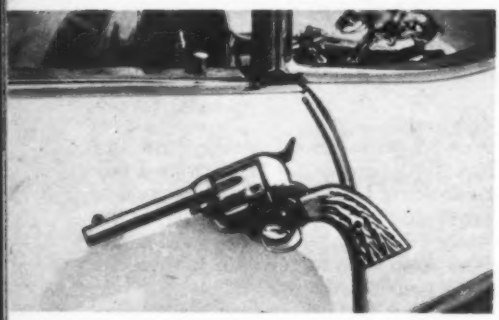
The tiny single-engine Cessna 172 was equipped with a pilot's seat and a seven-ft. bunk. Food, water, mail and clean clothes were supplied twice a day at refueling time—the most dangerous part of this flight to raise money for the Damon Runyon Cancer Fund. The plane sped only a few feet above the supply truck at 60 mph. •

PLANE'S grappling hook will be grabbed by man on truck. He'll attach supplies to it.

JAUNTY co-pilot Cook waves to truck crew during a refueling session above highway.

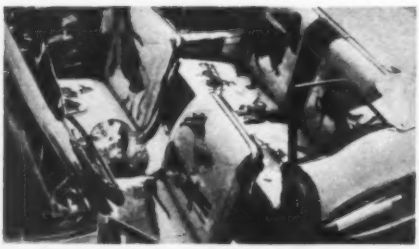
STEER HORNS decorate the hood; a chrome horse stands aloof on each front fender.

COW PONY DE LUXE

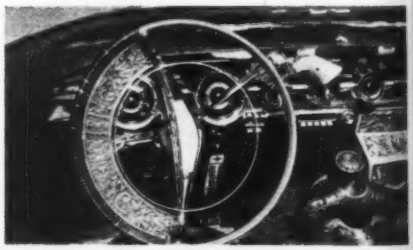


SIX-SHOOTER serves as door handle. When trigger is squeezed—bang!—the door opens.

NUDIE'S cow pony is a four-wheel iron hoss in on-the-range dress. The San Fernando, Calif., tailor who caters to TV and movie stars lined his '58 Pontiac with unborn calfskin. Its bucket seats are covered with white leather decorated with bulls, calves, etc. Goat horns serve as arm rests. Ten chrome horses' heads embellish the dashboard and doors. Carpeting is Australian goat fur. A miniature hand-tooled leather saddle divides the car's bucket seats. The flamboyant cowpoke rig cost Nudie $11,000—a grand more than the gold lamé outfit he designed for singer Elvis Presley. •



LEATHER seats are covered with appliqued western motifs made of unborn calfskin.



GEAR SHIFT is pearl-handled six-shooter. Hand-tooled saddlebag hangs from dash.

ENTERPRISING GI earns up to $50 extra a month snapping photos of his buddies opening packages from home. The gift-senders get photo with thank-you note.

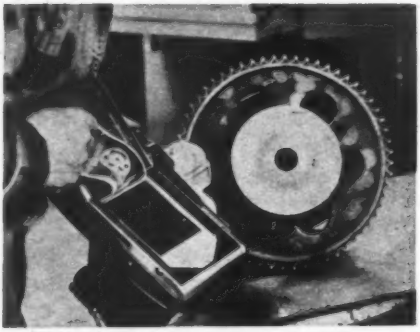
You CAN MAKE MONEY-IN-A-MINUTE

By Lyman Gaylord

ADVENTUROUS Murray Melbin had only one problem. The New York college student recently wanted to tour Africa and he was flat broke. But he didn't let lack of money stop him. He made his trip anyway and a year later ended up in Alexandria, Egypt, having traveled 16,000 miles through 24 countries at a total cost of only $27.61!

What Murray did was to swap photos taken with his picture-in-a-minute camera for everything from airplane rides and other transportation to meals, lodgings and souvenirs. And during that year Melbin's camera earned him more than $5,000 with its 60-second

SHOOTING couples at local dances, meetings is quick, easy way to make profits.



FOUNDRY worker adds to income taking one-minute photos of casting defects at plant.

MONEY-MAKING dad's part-time photos tell cabinet-maker's clients of work progress.

pictures of the African continent.

But you don't have to make a 16,000-mile jaunt through Africa to earn extra cash with a minute-camera. You can do it without leaving your home town. It's easy, too.

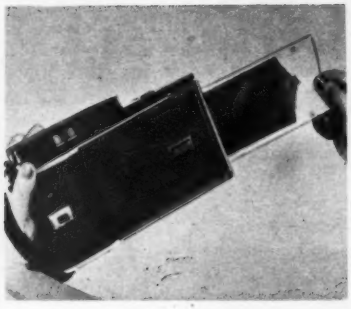
For instance, the groundskeeper of an athletic field in Canada makes an extra $10 every Saturday during the football season by shooting photos of the out-of-town football team's defensive formations. He delivers prints to the home team coach during half-time. The coach likes them because he can pick weak spots in the other team's line-ups.

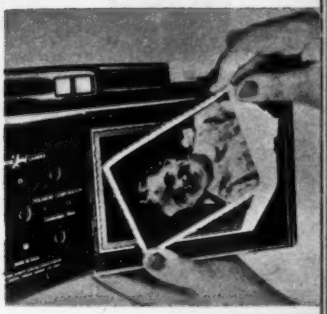
Another average but enterprising amateur GI photographer uses his Polaroid Land Camera to snap pictures of his buddies opening packages from home. His barracks mates generally send the photos home with thank-you notes. The shutter-snapping GI earns up to $50 a month for his efforts.

Many people are using 60-second cameras on their regular jobs to increase their income. For example, an airline employee at Idlewild Airport in New York takes photos of overseas-bound passengers in need of last-minute passport pictures. A clerk in a Wyoming drug store shoots pictures of customers who want to cash checks. The pictures give the store owner positive identification of check cashers. The clerk nets 50 cents a photo plus all the film he needs.

Some people have even made quick-print cameras full-time business aids. A tire repair service owner in New Bedford, Mass., equipped his salesmen with Polaroid Land Cameras to snap photos of cars needing new tires. The pictures included the license tags so that a clerk could get the car owners' names and home addresses. The prints were mailed with letters calling attention to the need for replacement tires. On the first day of camera operation, the firm's salesmen wrote orders for more than $500 worth of new tires.

These are but a few of the ways that picture-in-a-minute cameras can be used to make money. This type of camera is well suited to turning a fast buck because it has three great advantages: It's simple to operate, it does away with the expense and bother of a





60-SECOND photo. You snap the shutter, pull a tab and presto—your picture is printed.

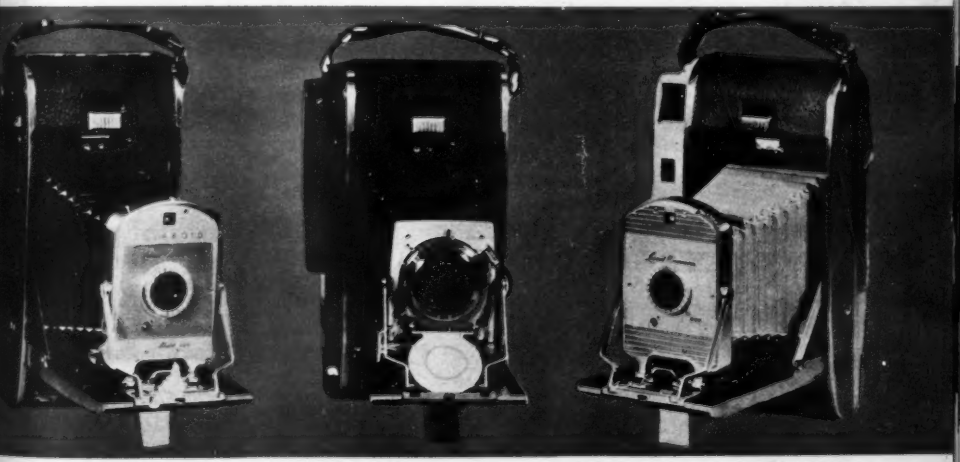
darkroom, and it delivers finished prints one minute after you've snapped the shutter. This can be a terrific stimulus to sales, for you can present a ready-to-sell photo to your customer while he's still most interested.

What are the situations that can lend themselves most profitably to 60-second photography?

One-time sales can be most lucrative. There are a lot of opportunities at the beach during the summer. Photos of surf-casters making catches, pictures of kids making their first, uneasy dashes into the surf, photos of sandcastles erected by junior engineers can all be sold for cash on the spot.

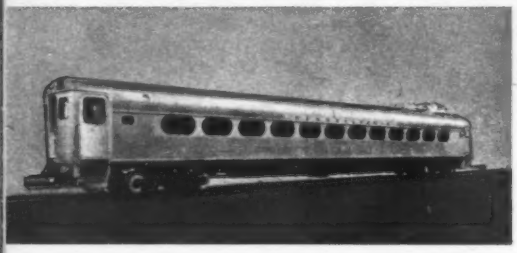
The same applies to dances, class reunions, business and fraternal conventions, summer camp activities, visits to the zoo and strolls in the park. In all of these situations you will find money-making picture opportunities if you keep your eyes open.

What should you photograph? Look for the unusual. People want to remember the high points of life—a new baby, a birthday, a big party, a wedding, a Christmas tree, First Communion, Confirmation, Bar Mitzvahs, vacation trips, special do-it-yourself projects, junior's first day at [*Continued on page* 168]



POLAROID LAND cameras: Model 150, $109.95; Model 110A, $169.50; The 800, $126.

Now See This!

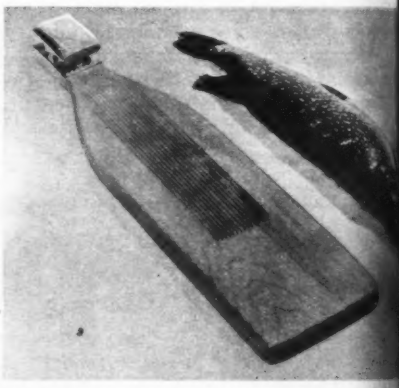


PENNSYLVANIA Railroad's new commuter car, now being tested for performance and passenger reactions, is another attempt to put mass surface transportation back on a sound basis. Called Pioneer III, the car has greater seating capacity, lower maintenance and operating costs. Each car's power comes from an overhead trolley with ground return. Up to 13 cars can be coupled together in one train. •

TRI-PHI, Inc., a Long Island electronics firm, has brought out a portable transistor radio-phonograph kit that you can put together with a soldering iron and household tools. The kit is at left; assembled unit is at right. Four flashlight batteries power the set, which has a dual sapphire cartridge, separate tone and volume controls and other features found in larger plug-in phonographs. •

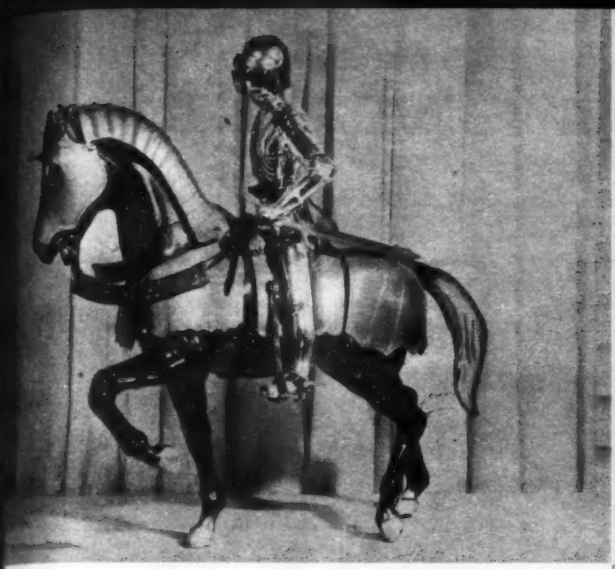
Tri-Phi, Inc., 141 Albertson Ave., Albertson, N. Y.

NESA—Pittsburgh Plate Glass Company's new defrosting system—is shown here in a lab demonstration. At left is the iced-up glass without NESA; at right is the clear evidence for the product. NESA is a transparent coating, electrically conductive, that is applied to the glass as it leaves the furnace. Voltage is applied between fired-on bus bars at opposite edges of the glass. NESA is being used to beat icing and fogging in jet aircraft. •



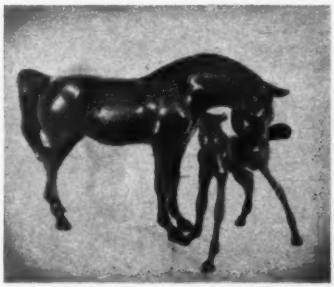
THIS fish-holding and scaling board, which its maker calls a Non-Skid Fish Cleaning Board, helps you through the slippery business of scaling your catch. The clipboard clip clamps his tail firmly, the grooves in the maple board prevent side-slipping. Rubber tips underneath keep the board in place. Sizes and prices: 4½x16"—$3; 5x20"—$4; 6x24"—$5. The device can be used while skinning and gutting the fish as well, the maker claims. •

Gardner's, Dept. 133, 230 Ave. C West, Bismarck, N. D.



HER HOBBY IS HORSES

THERE are more than 300 horses in Mrs. Esther O'Sullivan's Forest Hills, N. Y. home. However, there's never been a stampede for her equines are statuettes, like the armored knight on his steed above, and made of china, fine wood, metal alloys, plastic and stone. The widowed horse-fancier began her collection 25 years ago and the equines occupy an entire wall in her living room with more of the herd scattered about the rest of the house. •



THE SMALL, SMALL CAR STORY

FIAT 500 from Italy has top speed of 60 mph, gets about 50 mpg. The two-door rig carries four people. Its Port of Entry price, N. Y., $1,098.
Fiat Motor Co., Inc., 500 Fifth Ave., N. Y., N. Y.

AUSTIN-HEALEY SPRITE is economy car for sports aficionados. It will do 84 mph, get 40 mpg. Port of Entry price in N. Y. is $1,795.
Hambro Automotive Corp., 27 W. 57th St., N. Y., N. Y.

By Gordon Wilkins

HOW small can a small car be? European manufacturers, encouraged by the success of their small car imports, are now trying to extend the lower end of the market by bringing in small, *small* cars which, they hope, will beat sales resistance caused by low incomes, high gasoline prices and a shortage of parking space.

But economy is only part of the reason for the growing popularity of these midgets. They'll be used as second family cars that Dad can drive to the station. Or perhaps Mom will use her little wagon to pick up groceries or cart the kids to school. Many of them will be used by big-city firms to provide rapid delivery service at minimum rates in heavy traffic. And some people will buy them to give Junior convenient transportation to the campus.

These small, small cars, with a few exceptions, can be bought for less than $1,400. They are mostly four-seat vehicles with a wheelbase below 70 in. They average about 20 hp and have an engine capacity of less than 40 cubic inches.

(Editor's note: Cubic-inch displacement in an engine is determined by the volume of each individual cylinder, multiplied by the number of cylinders to get total engine capacity.)

You've probably seen many of these smaller imports on the street and wondered what they were like and where they came from. Let's take a look at some of the miniature cars which are now available in the United States.

Developed in Italy, the Isetta is now being built by BMW in Germany. An unusual feature is the hinged front which opens outward with steering wheel and instrument panel. You can park nose-first against the curb and step out onto the sidewalk. A ten-cu. in., one-cylinder, four-stroke engine delivers 13 hp by chain to the narrow-track rear axle.

LLOYD ALEXANDER TS from Germany gets 50 mpg. Port of Entry price, N. Y., $1,395.
House of Lloyd, 240 W. 54th St., N. Y., N. Y.

RENAULT 4CV. French car will do 70 mph, get 40 mpg. Port of Entry price, N. Y., $1,345.
Renault, Inc., 750 Third Ave., N. Y., N. Y.

FRISKY convertible from England tops out at 51 mph. Suggested retail price: $1,395.
British Car Distributors, Inc., Box 529, Ft. Lauderdale, Fla.

BERKELEY from Britain is 600-lb. economy sportster. It has top speed a shade over 80 mph, gets approximately 60 mpg. Port of Entry price, N. Y., $1,795.
Robert E. Lee Enterprises, Inc., 1741 Broadway, N. Y., N. Y.

Overall length is 93 in. It weighs 770 lbs. and has a 58-in. wheelbase. The Isetta provides roomy seats for two, has a top speed of 50-plus mph and gets about 62 mpg.

Lloyd Alexander TS is the latest offering from Borgward in Germany. The Alexander has an air-cooled two-cylinder, four-stroke engine of 36 cu. in. It puts out 29 hp. It has a wheelbase of 78 in. and seats four. Maximum speed is 70 mph and fuel consumption is about 50 mpg.

Goggomobil's newest model is the four-passenger T-700, the largest of its breed to date. The engine is an OHV horizontally-opposed two-cylinder, four-stroke job of 40 cu. in. which develops 32 hp. It has a top speed of 70 mph and travels about 56 miles on a gallon. Its wheelbase is 78 in. The T-700 weighs 1,400 lbs. Its price is $1,495.

You can also get a rear-engine Goggomobil. The Regent sports a 70-in. wheelbase and 10-cu. in. parallel-twin, two-stroke mill that is fan-cooled. This one does around 58 miles on a gallon and tops out at 50 mph.

BMW ISETTA 300 has unique hinged front door. German-made, 50 mph, about 62 mpg. Port of Entry price, N. Y., $1,048.
Fadex Commercial Corp., 487 Park Ave., N. Y., N. Y.

At $995 this tiny two-door, four-passenger car (slightly cramped) is the lowest priced Goggomobil. A sports coupe which looks like a scaled down Alfa Romeo and handles like a junior Porsche is also available.

NSU Prinz is a sprightly, rear-engine German car. It has an air-cooled, two-cylinder, four-stroke 35-cu. in. engine with overhead camshaft. It develops 26 hp. The power plant lies transversely across the back of the car with cooling fan and generator coupled to opposite ends of the crankshaft.

CITROEN 2CV will do 55 mph all day, get 65 mpg. Port of Entry price, N. Y., $1,195.
Citroen Cars Corp., 300 Park Ave., N. Y., N. Y.

GOGGOMOBIL goes about 50 mph, 58 mpg. Port of Entry price, N. Y., $995.
Continental Car Combine, 1726 Broadway, N. Y., N. Y.

This leaves the whole wheelbase —78 in.—free for passenger space. Top speed of this two-door, four-passenger, 1,200-lb. car is about 70 mph. It gets about 51 mpg.

In Italy, Fiat already had one of Europe's smallest cars in the 600 model. But sales were falling off and the company introduced the 500. The Fiat 500's power comes from a four-stroke engine at the rear, car- [*Continued on page* 166]

NSU PRINZ is rear-engine German car, does 60 mph, 50 mpg. Port of Entry price, N. Y., $1,398.

GUNS THAT FLY

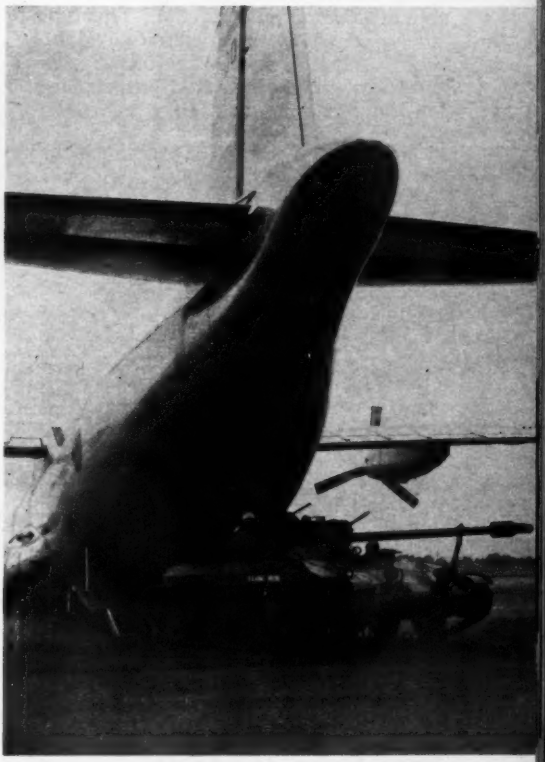
BIG GUN is 5,000-lb. 105mm howitzer. Three 100-ft. diameter parachutes float it down.

STRAC is the abbreviation for the Strategic Army Corps, a new muscle in Uncle Sam's arsenal of counter punches. This powerful force consists of four ready-to-fight divisions that can be swiftly airlifted anywhere in the world with their equipment and supplies.

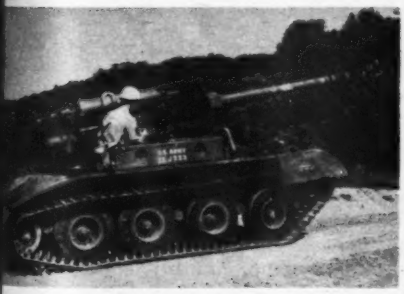
Their weapons, developed at the Aberdeen Proving Grounds, Md., will include such items as 105mm howitzers; 36,000-lb. T-92 tanks which are specifically designed for air transport; and M-56 self-propelled weapon carriers. Virtually any heavy weapons or mobile vehicles, including bulldozers, could be dropped via parachute to STRAC forces in a combat area. This new mobility would give a small striking force the firepower of a much larger group and enable it to repel or attack any would-be aggressor with modern weapons.

MACHINE GUN carrier is experimental job. Gunner lies on stomach and operates vehicle in the prone position.

AGILE Army Mule can carry cargo or be used to mount a recoilless rifle.

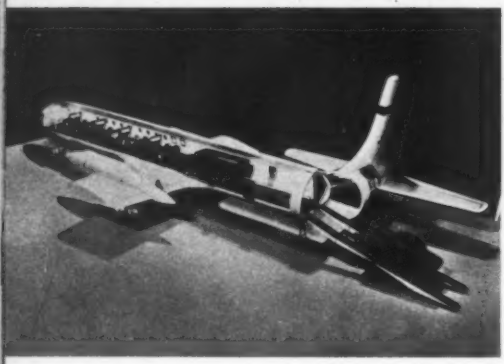


ROLLING out of C-133 transport plane is T-92 tank designed specifically for STRAC troops.



LIGHTWEIGHT M-56 weapon carrier is self-propelled, has 90mm cannon.

Now See This!

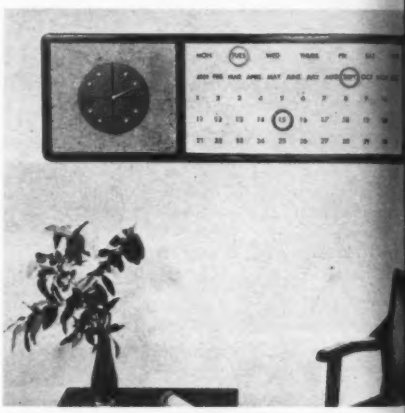


THIS cut-away model of Canadair's new CL-44 swing-tail plane shows the kind of load it can carry—four jeeps, a truck and a tank. CL-44 is also available in a commercial version. This type of rear entry permits classic straight-tube fuselage, which is better aerodynamically than other rear-entry plane constructions now available. •

HERE'S what movie Kildares, not to mention the real lancet-wielders, will look like soon. This plastic mask, being tested at Minneapolis General Hospital, has proven tremendously more effective in keeping germs out of the operating area. The air breathed out is deflected backward, away from wound. Mask can be sterilized easily. •

REVELL'S latest authentic scale model: a complete atomic reactor plant scaled from blueprints developed by Westinghouse Electric Corp. This layout could well serve as the model for hundreds of future power plants throughout the world. With each kit comes a booklet, The New World of Atomic Power. Other Revell models in its atomic series are the Savannah and the sub George Washington. •

Revell, Inc., Venice, Calif.



HERE'S a timepiece that will keep you apprised of the month, day, hour, and minute for years to come. You will have to keep the year in your head, which is difficult during January. The wall clock has an imported eight-day movement. The ring magnets require daily and monthly adjustments. Clock face is tangerine or cerulean with white markers, brass hands; calendar is tawny beige. The price is $79.50. •

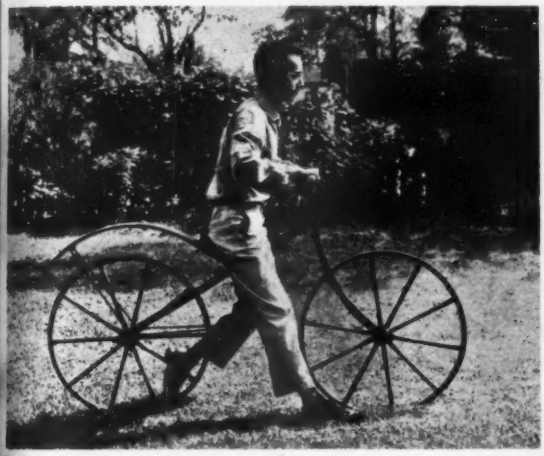
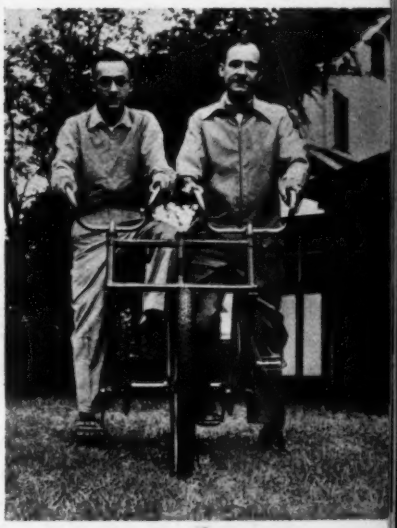
Antique Bikes

NO FEET is no mean feat on Pennsylvania blacksmith's 1869 model featuring rear wheel brake, front wheel drive.

1880 OTTO, wooden-wheeled "penny-farthing" still goes.



NO PEDALS on an 1830 French walking "bone-breaker."

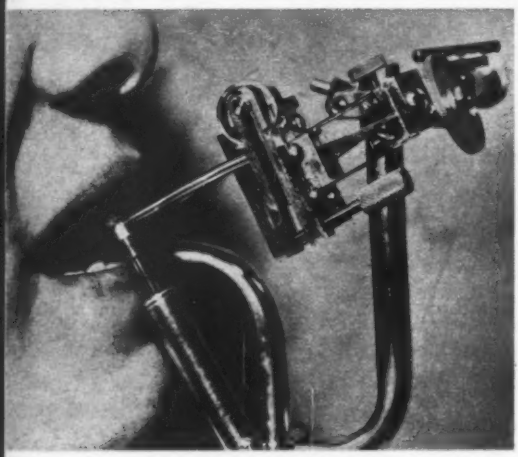


DAISY, DAISY was not invited to share a bike like this.

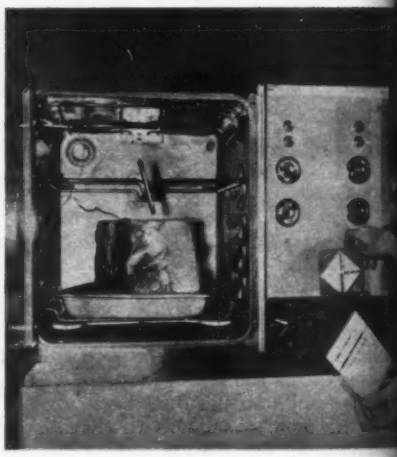
TWENTY years ago Dr. Stanley Fisher found an antique high-wheel bicycle in a farm shed. That was the beginning of his bike collection, which he keeps at his home in Bergenfield, N. J. When Dr. Fisher finds an old bike he brings it home and he and his son Arnold (the cyclist in the pictures) restore it to rolling condition. High-wheelers, whether they have the big wheel fore or aft, are tricky to ride and hell to stop; you slow down and jump. Easy for both of the Stanleys, who are expert unicyclists. •

IT'S NEW!

LOW-SLUNG rear wing on Mignet 320 also serves as elevator, makes ship safer, easier to handle. French plane cruises at 80 mph, can land, take off in less than 50 yards.

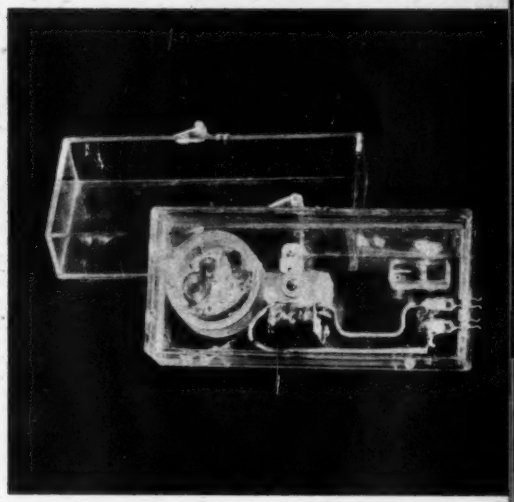


MOBILOMETER measures tooth movement to test theory that amount of movement is a clue to general health. Southern Research Institute at Birmingham, Ala., devised it.

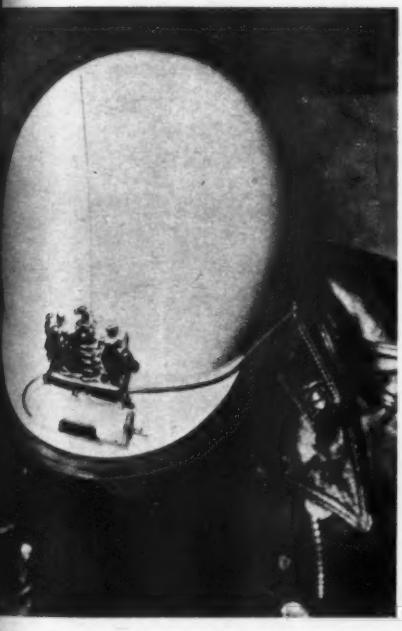


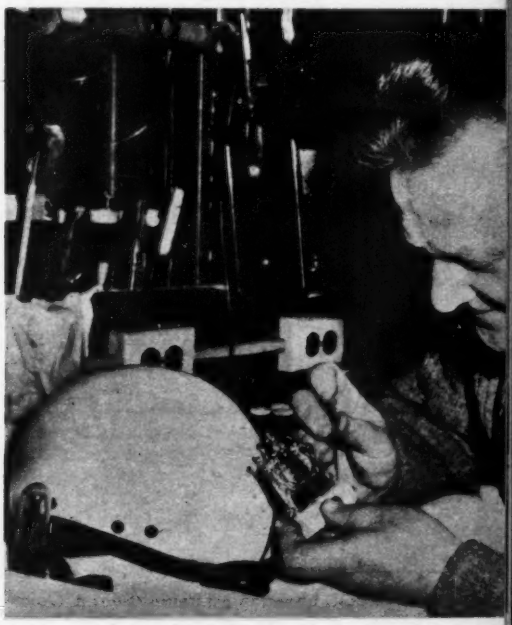
WHAT'S COOKING depends on notched plastic timer card—one for each type of food to be cooked—which automatically operates this electric oven displayed in Chicago.

MOTOR scooter exhibited at West German toy fair in Nurnberg is designed for the youngsters. Miniature scooter has a one-cylinder engine and top speed of 16 mph.



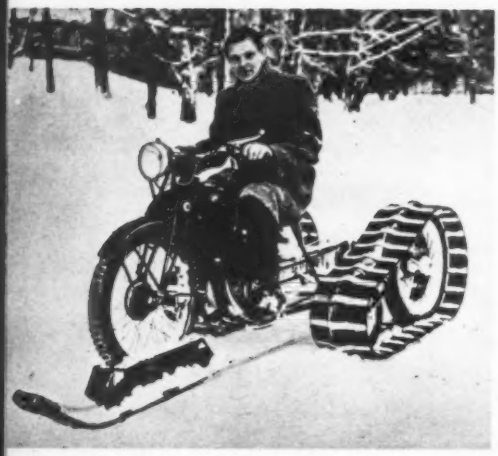
HEART-BEAT counter, worn on body, tallies the number of beats in 24-hour period. The tiny, three-ounce device was developed by engineers of Illinois Bell Telephone Co.





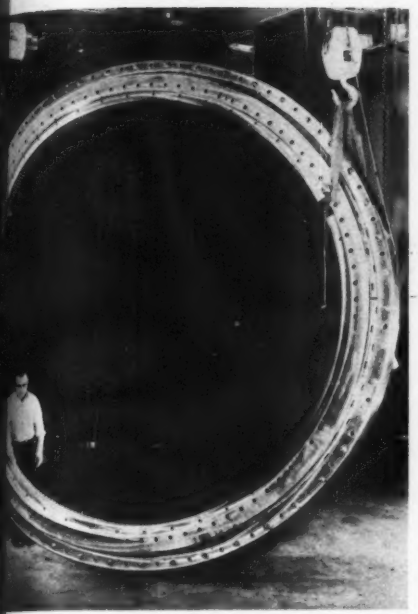
HELMET RADIO has 2½-oz. receiver under shield, with 12 to 14-mile range. It costs penny a day to operate. Larry Smith, Atlantic City, N. J., policeman, developed tiny unit.

EGG-SHAPED car is powered by a one-cylinder air-cooled engine. It has a top speed of approximately 60 mph. The English auto is called the Nobel 200 and will sell for a little over $1,100. The four-passenger car is not slated for export to the United States at the present time.



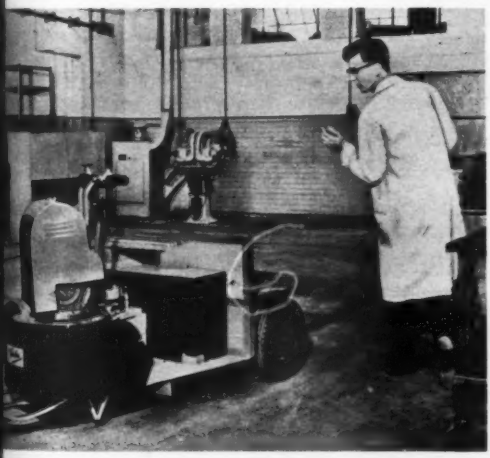
COLD ROD invented by Reidar Berg of Oslo, Norway, is winter motorcycle fitted with a ski on front wheel, tank-like treads on rear wheels for easy over-snow transport.

PUSHBUTTON telephone is being given trial by Southern New England Telephone Co. in Hamden, Conn. homes to test system, determine if fewer wrong numbers are dialed.



BIG RING—14,600 lbs. and 13 ft. 9 in. in diameter—made by Kaydon Engineering Corp. for Nike-Zeus radar system is largest anti-friction precision ball bearing ever built.

FOTO-BAG comes with a miniature built-in camera housed in small, trap-door pocket which enables user to get camera without opening bag. Handbag is an English design.



ROBOTUG operates via remote control following electric wire beneath floor. British Railways will use system. Freight vehicle also runs on batteries and automatically stops at obstructions.

SWEDISH JEEP. Swedish importer used special chassis to convert Willys' Jeep into eight-passenger vehicle. It also has two extra emergency seats.

HOT WEATHER FISHING

By Wynn Davis

EVERY month of the year I get letters from readers asking where they can be sure of catching a load of big fish. Then they throw in the bomb—"We plan to take our vacation during July or August."

Long ago I learned the futility of advising anglers to take vacations during May, June, September or October, when fishing for all game fish is tops over about three-quarters of this country. Most of us want to escape the searing heat of midsummer. But when you fish during midsummer don't blame your slim luck on the waters you fish. The fish are there but they, too, are escaping the heat or trying to. I'd say that two things defeat most summer vacation anglers—the dinner bell and the sand man. The hot-weather Waltons are either eating or sleeping when the fish are biting.

Game fish go to dinner when they are hungry, and not at regular hours of the day. For some species, the time may not be the same as for others. But in every case, the one thing that rings the dinner bell for fish is the temperature of the water. When it cools off fish become active and hungry. They move into their feeding areas: shore lines, over gravel or sand bars, near weed beds or they cruise just beneath the surface or in the tails of big pools, depending upon the species. If the water doesn't cool off in the regular feeding areas, the fish get what food they can deep down. The fishing is really tough then—day or night.

There may be a few factors that might keep fish away when the water temperature is right. Some experts, for example, claim [*Continued on page* 170]

NOT for ocean-going jaunts but plenty of fun in lake or pool is the rig being demonstrated this month by MIMI, world's prettiest product-tester. It's called Paddle-Fun and consists of an inner tube equipped with oar locks and oars. MIMI says the speed is nothing exceptional but the pick-up is sensational. From Paddle-Fun, Inc., 1985 Harlem Blvd., Rockford, Ill. It retails for about $9.95 with tube. •

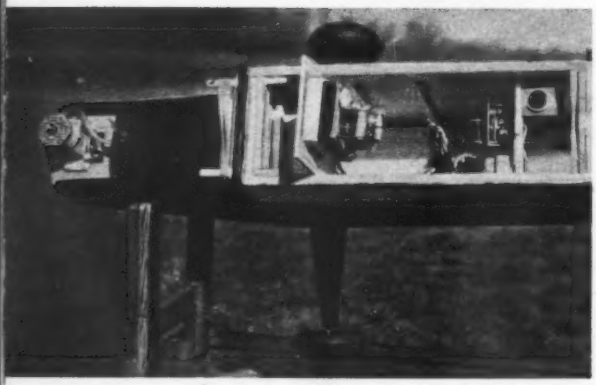
UHF Flying Model



GLOW PLUG engine is in nose, radio receiver over landing gear, escapement device in center of cabin.

YOU could hear the healthy hum of the engine as the tiny plane swooped over the field, circled once, and then made a perfect three-point landing at the feet of the man guiding it with an Ultra-High Frequency radio transmitter.

The man was Bill Winters of Levittown, N. Y., owner-builder of the radio-controlled model plane shown here.

The craft is made of balsa wood and is covered with silk and coated with aircraft dope. An escapement device, triggered by signals from the transmitter, operates the rudder. Wings and stabilizer are se-

BOOSTER battery starts the engine and is disconnected once powerplant is running.

ENGINE burns alcohol-base fuel and does not require ignition. Here it is injected.

cured with rubber bands to minimize damage in the event of a crack-up.

A strip of rubber is wound with a hand drill to provide muscle for the escapement to turn the rudder. A milliammeter plugged into a socket in the model plane permits sharp tuning of the receiver, with the transmitter turned on. The engine burns an alcohol-base fuel and does not require ignition, other than a glow plug which is heated for starting the propeller by a small booster battery. Once the engine is running, the battery is disconnected. The pilot runs a few steps and launches the plane into the wind.

Radio transmission is in line of sight and the hand-held transmitter is aimed at the plane like a gun.

Radio-controlled planes have become so popular that the Federal Communications Commission has provided frequencies for the use of hobbyists. The model shown here operates on a frequency of 465 megacycles.

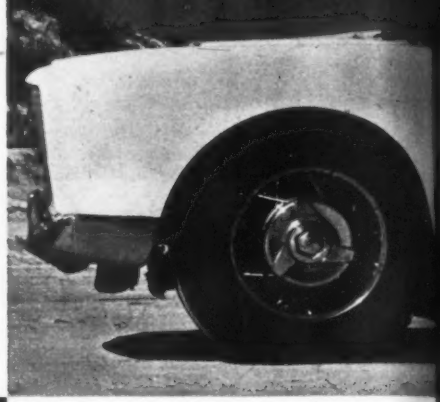
Radio-control kits to fly model planes run from $20 to $200 in price. You'll find them a lot of fun. •

TRANSMITTER on, milliammeter plugged into socket permits sharp tuning of receiver.

TAKE OFF! Pilot runs a few steps and then launches radio-controlled plane into wind.

MCCAHILL TESTS

The FACEL-VEGA



SPORTSMAN Jack Rutherfurd of Palm Beach-New York lent Tom Facel-Vega.

TEST CAR SPECS

MODEL TESTED: **Facel-Vega coupe**

ENGINE: Chrysler 300

Wheelbase **104.7** ins; length **181** ins; height **53** ins; width **70.8** ins; front tread **55.9** ins; rear tread **57** ins. Weight **3,885** lbs. Gas tank capacity **27** gals. Turning circle diameter **36** ft. Tire size **6.70X16.**

PRICE (without optionals): **$9,000**

PERFORMANCE: **0-30** mph, **3** secs; **0-60** mph, **7.9** secs; **40-60** mph, **4** secs. Top speed **130** mph. All times recorded on corrected speedometer.

Uncle Tom reports on a new $9,000 French beauty: "A remarkable and wonderfully satisfying road companion."

By Tom McCahill

THE Facel-Vega is dreamstuff for the guy with enough guts (and dough) to dream big. Sexier than the Place Pigalle and throatier than a Russian basso, this French beauty is built right in the center of Paris, is powered by a Chrysler 300 engine and has enough on the ball to raise the blood-pressure of a mummy.

The Facel-Vega in some ways reminds me of the Italian-American Vignale Cunningham of a few years ago. This is not a bucket for the conformist but may prove a terrific rig for the sports car connoisseur who wants a cross-breeding of the best, meaning a functional European coupe that has sports car handling and the performance of a race car. It's a 130-mph hack that

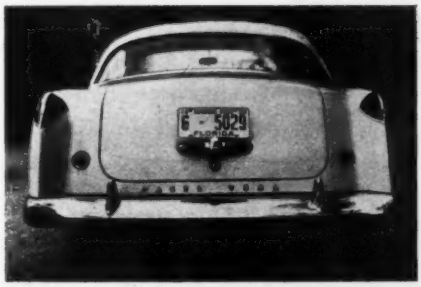
SHAPELY models. The one with wheels has 104.7-in. wheelbase. It is 70.8 in. wide, seats four people and weighs 3,885 lbs.

will break 0-60 mph in less than eight seconds and still provide luxurious interior comfort for driver and passenger.

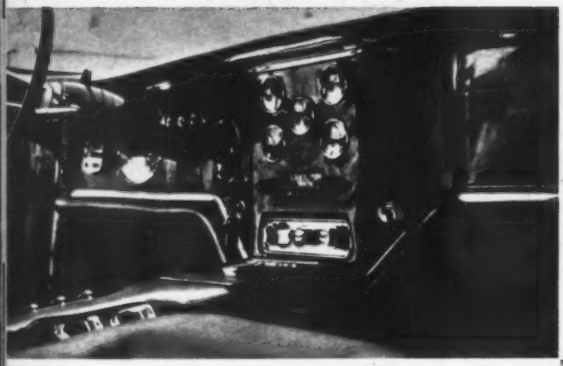
Oddly enough, the Facel-Vega with a price tag of roughly $9,000 is one of the cheapest offerings with so much quality and looks available in the world today. Usually cars with this much swashbuckle and appeal, obviously in the beluga caviar class, sell for considerably more.

My test car was supplied by Commander Jack Rutherfurd, who not only owns the Vega but is the proud possessor of a dozen or so other mouth-waterers as well. Mark Twain once reportedly said, "You may know a man by the horses in his stable." One look at Jack Rutherfurd's stable either at his winter home on the lake shore at Palm Beach or at Sands Point, Long Island, and you'd know instantly that the guy who lives there isn't any ribbon clerk. Seventy years ago when the Good Lord was handing out swashbuckles he gave a whole case of them to Jack. I've had readers ask me on occasion, when we do a piece on a particularly exotic car, "What kind of people buy those things?" So here's a thumbnail description of Jack Rutherfurd, the kind of man who buys Facel-Vegas.

Jack might very rightly be called the Dean of American Sportsmen. A well-known World War I Navy flier and later test pilot, during World War II he was Commanding Officer of the Willow Grove Naval Air Station in Pennsyl-



GENTLY rounded curves and absence of tail fins keynote simplicity of rear-end design.



DASHBOARD with walnut finish houses the instruments. Car has Chrysler 300 engine.

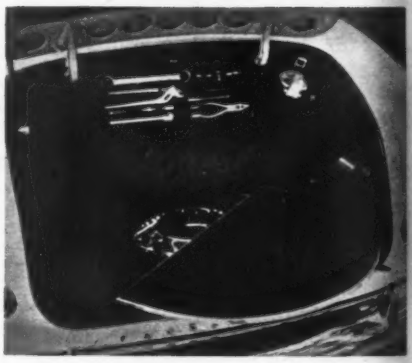
vania. He has raced airplanes and won automobile races and hill climbs as far back as 1908 and 1909. He has copped most of the major speedboat trophies in the world including the President's Cup (which was personally given to him by Frank Roosevelt), the Wanamaker Trophy, the Harmsworth Trophy and international silverware for winning at Lake Como in Italy and Lake Geneva in Switzerland. A lot of these things happened some time ago and you might ask, "Okay, but what's he done *lately?*"

Well, Jack made the fastest time during Speed Weeks 1958 with his D-Jag at an average speed of 163 mph. He has won speed trials in recent years in 4.1 Ferraris and C-Jags and he made the fastest time in the passing test in 1958 with his Bonneville Pontiac (only to be disqualified for going over the shoulder line). Add to this the fact that, at 69 years of age, Jim McMichael and I were with him when he was insulted by a young punk who outweighed him by a good 40 pounds. Without batting an eyelash, Rutherfurd floored him for the count. That, kiddies, is what I call a man!

Jack is a gentleman of the old school, the type the Facel-Vega appeals to. A cruise through his Florida garage shows that he's causing the relief agencies no trouble whatsoever. There you'll find a Cadillac Eldorado Brougham, a 190-D Mercedes-Benz diesel, his D-Jag (which finished third in the 1959 1,000-kilometer sports car marathon at Daytona), a 300SL Mercedes, a '59 Pontiac station wagon and the Facel-Vega which he uses for his go-to-the-store car. If you're invited for cocktails (and we were), you stroll down Jack's dock and board his 90-ft. yacht which has a circular bar only 18 inches smaller than Toots Shor's. However, before delving into the booze, let's go back to the Facel-Vega.

Built [*Continued on page* 162]

LEATHER seats, fore and aft, each have a big, comfortable arm rest separating them.



SPARE is kept under trunk deck covered by slide-off lid. Tool kit comes with the car.

McCAHILL TESTS the MERCURY

NICE TOUCH. Tom liked Mercury's looks. Simulated wood paneling is Fiberglas.

REAR END styling is neat, simple. Window opens by sliding down into the tailgate.

By Tom McCahill

MY '59 test Mercury was a four-door "Colony Park Country Cruiser Station Wagon"—and if that isn't a hunk of nomenclature, you can part my skull with a spade and plant a lily in the pulp. For power it was equipped with the medium-size 383-cubic-inch V8 with a single smokestack. This job is also available with a smaller mill of 312 inches or a thundering giant displacing 430. Actually, the 383-cubic-inch rig is a good high-speed combination with one fault which its larger-engined brother

"A solid automobile . . . Sops up bumps like a fat girl on a skating rink . . . At high cruising speeds it loafs along hour after hour without effort."

BIG M racked up a N1.6-mph average for ten miles on Daytona Speedway, handled corners beautifully, says Tom.

FRONT VIEW reveals rather conservative taste by '59 auto standards.

EASY to reach spare is vertically mounted at side. Third seat folds under the floor.

TEST CAR SPECS

MODEL TESTED: **'59 Mercury Colony Park Country Cruiser**
ENGINE: **V8** cyls; **383** cubic ins; **322** brake hp; **420** ft-lbs max torque; **10** to **1** compression ratio. Bore **4.30** ins; stroke **3.30** ins; Fuel required: **Premium.** Standard axle ratio: **2.71.** Wheelbase **126** ins; length **218.6** ins; height **57.8** ins; width **80.7** ins; front tread **60** ins; rear tread **60** ins. Weight **4,641** lbs. Gas tank capacity **19.5** gals. Turning circle diameter **43.3** ft. Tire size **9.00x14.**
PRICE (without optionals): **$3,932.**
PERFORMANCE: **0-30** mph, **4.7** secs; **0-60** mph, **11.9** secs; **40-60** mph, **6.4** secs. Top speed **115** mph. All times recorded on corrected speedometer.

PUSHED-BACK dash allows more comfort and knee-room. Buttons control windows.

probably doesn't have. The fault is a lack of go in the passing ranges when you want to dig out and make an end run around the milk trucks and scooter people.

Twenty years ago when the Mercury was born, it was simply a big, deluxe brother of the Ford. As one high hunk of brass told me at the time, this car was what Ford really wanted to build but couldn't in a highly competitive market. Ten years later, in 1949, Mercury broke the old fraternal ties and shot off on its own. For the first time it was coupled with the Lincoln division and became a deluxe little Lincoln rather than a great big Ford.

Since 1949 Mercury has been shuffled into a half-dozen corners. It was more or less the experimental car of the Ford interests until the Edsel popped up. In 1957 Merc introduced on these shores what some critics considered the wildest departure from classic design since John Barrymore broke his nose. That styling seems somewhat tame today and the '59 car turns out to be a good-looking, fairly conservative offering with only a minimum of launching-pad overtones.

You old, old readers (the ones with beards) may recall that years ago I was quite a Mercury fan and owned several, including one in which I crossed the Rockies through a raging blizzard. A lot of love affairs have gone over the dam since then, so to bring you a current look-see at this newest of Mercurys, made a 2,000-mile test which revealed many facts that might have been overlooked in a quick twirl around the park.

My test run started in New York City, proceeded down the Penn Turnpike, the New Jersey Turnpike, U.S. #301, U.S. #1 and U.S. #17, ending up at Daytona Beach, Fla., where I made some high-speed runs on the new Daytona International Speedway, plus many braking and acceleration tests. From the track I took the Merc over to the famous beach where I made a number of controlled spins to check out the car's handling properties. But let's get back to its over-the-road qualities.

At high cruising speeds this wagon loafs along hour after hour, at just about any speed [*Continued on page* 160]

WARNING—SKIN DIVERS BELOW

DIVER'S BUOY—an inner tube rigged with the warning flag—can support three divers.

TWO TYPES—a tube-supported signal and self-contained unit with staff in float.

THE most dreaded peril of skin-diving, among initiates, is not giant squids, the bends, barracuda nor immersion foot—it's motorboat propellers. Unfortunate divers have brushed the blades of propellers with results so permanent that divers have learned to fear surfacing more than anything below. So now the Great Lakes Divers' Club of Michigan has created a new red and white warning flag that is fast gaining international acceptance. The signal is handy in the Pacific Northwest, too; up there the seal hunters are apt to mistake the gleaming head of a diver for that of a hair seal, which has a $5 bounty on its snout.

So—when cruising around, stay 100 yards away from this signal. Some boatmen have actually approached it out of curiosity, making it an extra hazard instead of a lifesaver. Skin-divers hope that the signal will become widely known. •

TANK FARM stores vital fuel which is pumped in from the ships standing off shore.

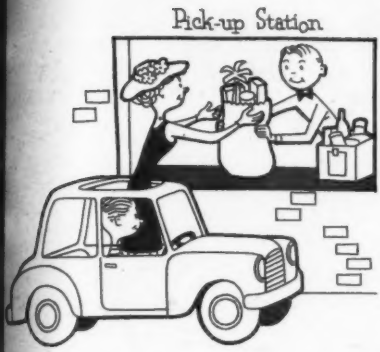
Leathernecks' FUEL FARM

SUPER service stations in the form of 10,000-gallon fuel tanks made of rubberized fabric would keep Marine Corps' vehicles and aircraft supplied with fuel under combat conditions. The tanks, which weigh about 600 lbs. and can be folded for storage, would be filled via pipeline from tankers off shore. The fuel can be pumped from ship to tank at a rate of 350 gallons per minute.

A tank farm can be set up right behind the front lines. Each rubberized tank is 40 ft. long, 11 ft. wide and four ft. high. The tank farms can be large or small, according to combat demands. The fact that they can be dispersed over a wide area would make it extremely difficult for an enemy to completely sever the flow of vital fuel. •

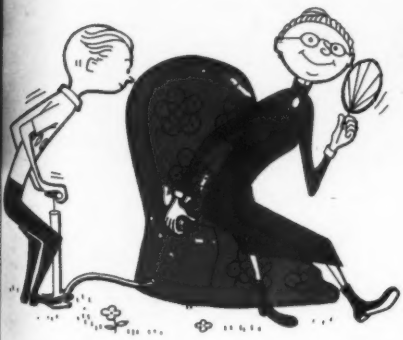
BUOYANT fuel lines speed steady flow of the gasoline to the inland storage tanks.

EASY dispersal of 40-ft. long tanks makes it extremely difficult to cut fuel supply.



GROCERY PICKUP stations in supermarkets to save the long carry to the buggy. Mrs. M. H. Sutherland, Lake Odessa, Mich.

SELF-TIGHTENING skates—just push a button for snug, secure fit. Easier on Daddy as well. Larry Tice, South Bend, Ind.



PNEUMATIC CHAIR—so wherever you are you can say "Junior, blow up Grandma's chair for her." E. D. Foulds, Nanaimo, B. C.

INVENTIONS WANTED!

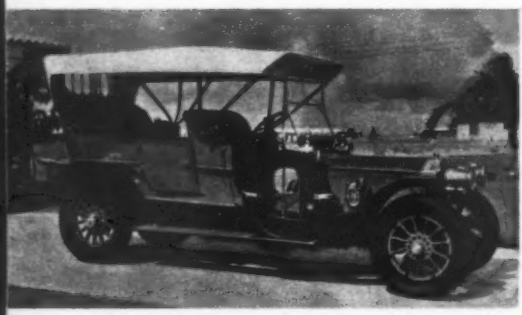
DIRT HUNTER light on wands of tank vacuum cleaners, for better cleaning in dark places. Edward Carlson, Dorchester, Mass.

QUART MARKS on sides of sinks would be useful for starching and other household mixing jobs. Ann Morizzo, Wyckoff, N. J.

HEAVENLY days for the Newman clan. The big car has top speed of 75 mph, travels eight miles on a gallon of gas.

1908 ROLLS-ROYCE



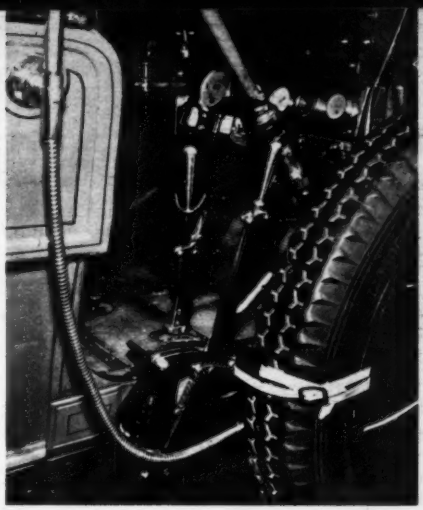
JAUNTY 50-hp auto sports a beige touring top, a bright red body and black fenders.

A MECHANICAL thing of beauty is the 1908 Rolls-Royce Silver Ghost which was superbly restored at a cost of some $5,000 by its owner, Millard Newman of Tampa, Fla. Newman, an old-car tinkerer in his spare time, wanted to rebuild an old Rolls-Royce and finally found one on Long Island, N. Y.

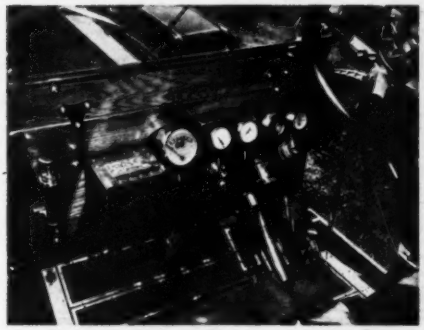
The car was shipped to Newman in Tampa during a cold spell. The six-cylinder engine is composed of two three-cylinder blocks and both of them arrived cracked. Newman wrote to the factory in England and not only got the last two blocks known to be in exist-

ence for his model, but also much helpful rebuilding information.

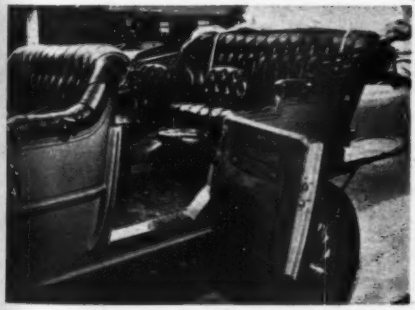
Newman then acquired a seven-passenger Locomobile-made body designed especially for his vintage auto. At last, with its gleaming brass accessories and parts, and 17 coats of hand-rubbed paint, the brilliant red, 5,300-lb. car with its huge 145-in. wheelbase was ready to roll. Newman's automotive dream had become a reality. •



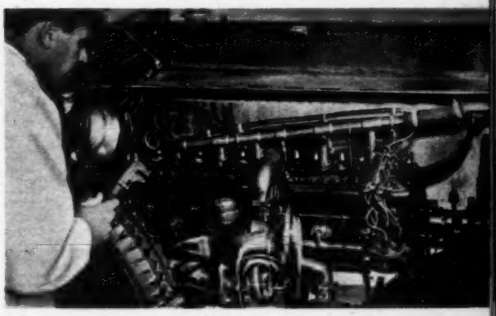
STURDY floor gearshift and brake are on driver's right. Tubing conveys air to horn.



DASHBOARD has speedometer, odometer and fuel and oil gauges, clock and ammeter.



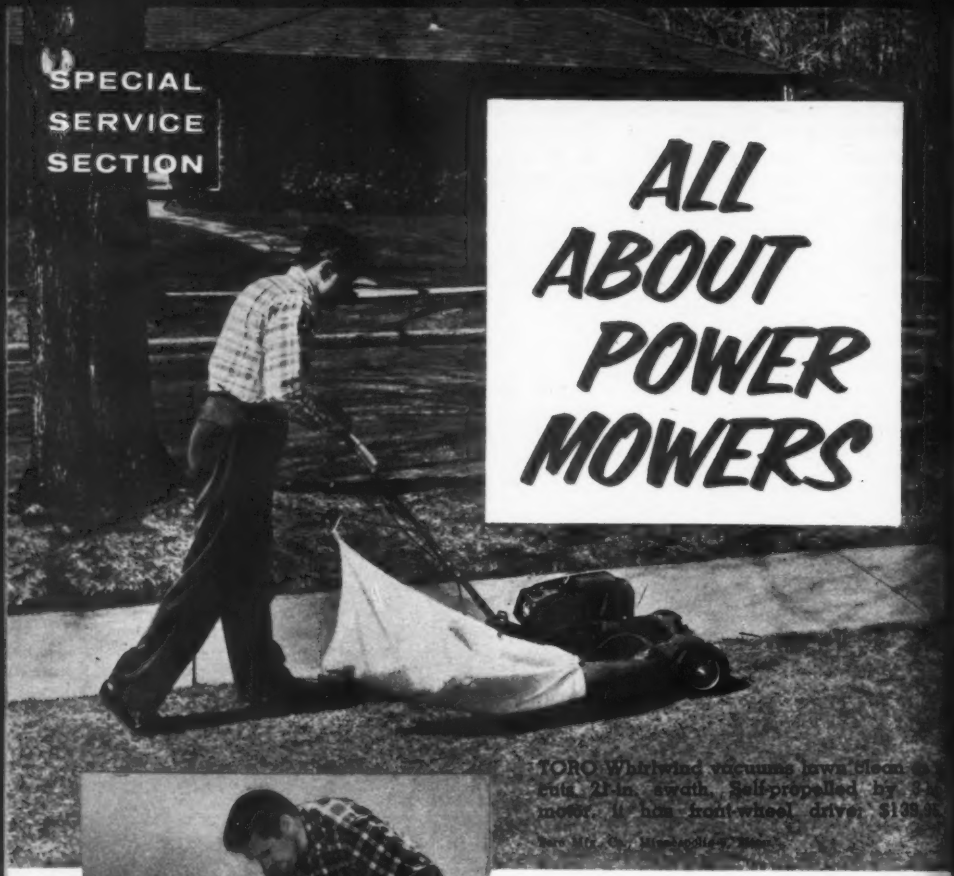
JUMP SEATS are in rear of car. The body is heavy teak wood, upholstery is leather.



ROLLS-ROYCE engine is over four ft. long. It has 4.5-in. bore and 4.75-in. stroke.

SPECIAL SERVICE SECTION

ALL ABOUT POWER MOWERS



TORO Whirlwind vacuums lawn clean as it cuts. 21-in. swath. Self-propelled by 2-hp. motor. It has front-wheel drive. $139.95.

WHIRLWIND comes assembled except for the handle, controls and grass catcher.

By Al Bernsohn

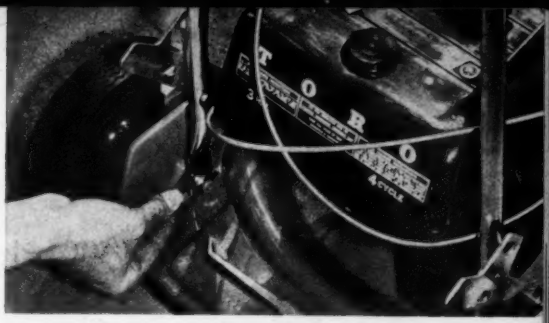
CHECK with the manufacturers of power mowers and you soon find you're on a battleground that makes Gettysburg almost seem like a tea party. Die-hard advocates of reel mowers stoutly contend that rotaries fray grass ends and make a lawn look like an amateur haircut. The more numerous rotarians snap back that reel-types can't handle grass longer than a toothpick and are old hat anyway. Similarly, the riding mower guys and the self-propelled boys snoot those who push their own. In another corner, champions of the wide-swath cutter contend that the narrow-gauge users are killing themselves with too much exercise. It all means that buyers of 1959 power mowers will run a confusing gauntlet of

conflicting arguments when they go shopping. But there's much to be said for each type of mower—and said without crossed fingers.

In 1959, the mower-makers are showing new features aimed at operating convenience and safety, such as instant height-of-cut adjustment, start and stop controls, fully-guarded cutter housings, low-cost automatic rewinds and electric starters.

Also new this year are rotary models that vacuum the lawn while cutting and riding mowers that feature automotive-type transmissions, foam rubber seats, pneumatic tires, automatic starting and power steering.

Before getting into all the refinements, it would be well to differentiate between the types of mowers and how they work. The blade of the rotary is attached directly to the shaft of an engine mounted vertically. Thus the blade whirls in a horizontal plane. Its cutting action depends on speed rather than sharpness so it should move



HANDLE for Whirlwind is positioned on studs in mower housing and secured with cotter pins.

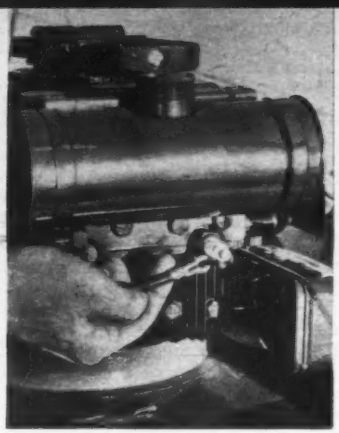
WING NUT holds discharge chute under hinged deflector. That's leaf mulcher in foreground.

BAG goes on chute, is held in place by draw string at neck.

CUTTER BAR should be kept clean and free of grass masses. A screw holds it, must be drawn up tight.

AIR CLEANER must be taken out occasionally, tapped gently to clean.

FACTORY sets idle screw but resetting may be needed.



SPARK PLUG lead is disconnected to prevent accidental start when working on mower.

OIL SUMP is filled to overflow point with good grade of S.A.E. 30 oil, has a 1¼-pint capacity.

at about 3,800 rpm—much faster than a reel mower. Rotaries can utilize two- or four-cycle engines and many are electrically powered. The most popular type is hand-propelled with the engine turning the blade and the operator pushing the mower. However, a rotary which cuts a real wide swath is usually self-propelled, with the engine turning the blade and the wheels and the operator merely guiding. The average life of a rotary mower is three and a half to five years.

In the power reel mower, the engine and its shaft are horizontal and the power is transmitted to the wheels by a chain, belt or gear mechanism. The wheels, in turn, move three to five blades that shear the grass against a stationary cutting bar. It's basically an application of power to the old-style hand mower. Most often, a four-cycle gasoline engine is used, though many reel mowers are driven by electric motors. The reel machine has an average life of seven to ten years. Both reel and rotary

REGULAR GAS is used. Since Whirlwind has 4-cycle engine, oil isn't mixed with the gas.

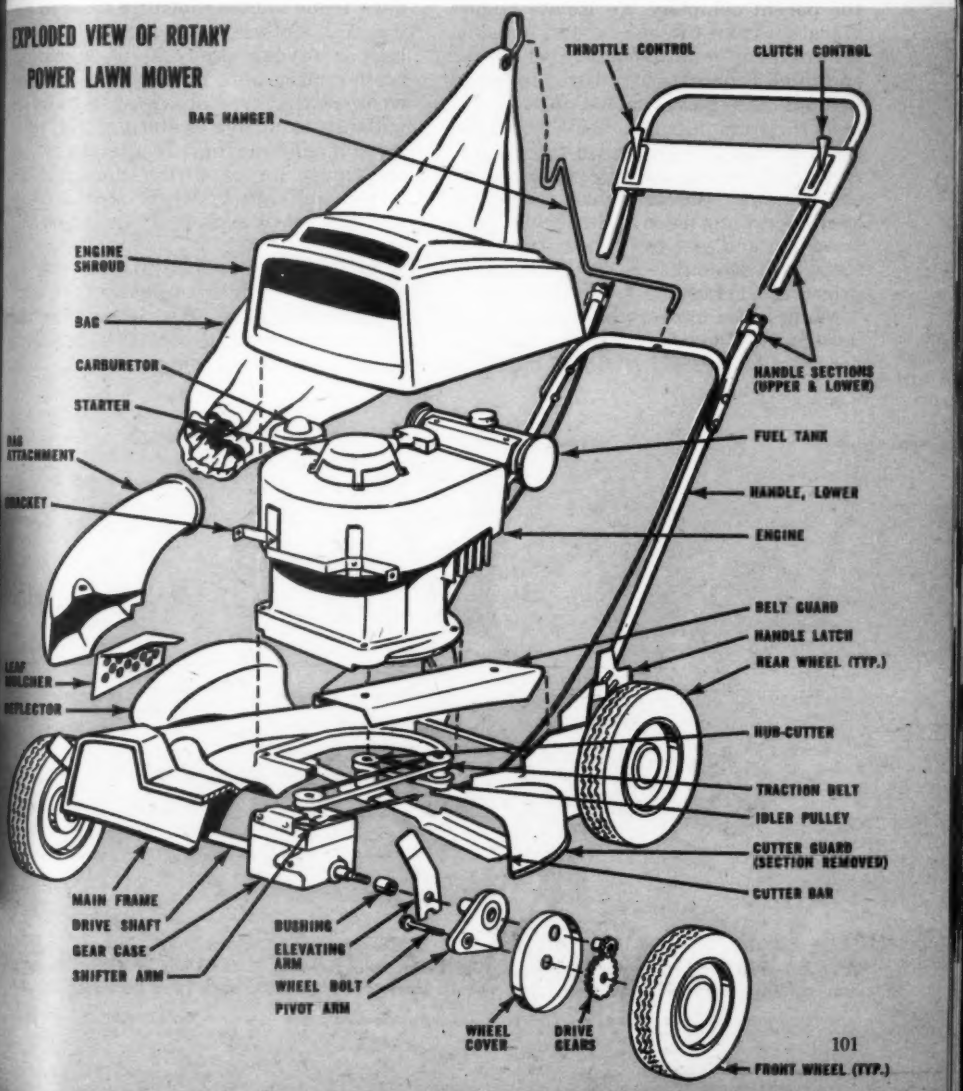
CUTTING HEIGHT is adjusted by means of levers which alter wheel height.

STARTING is simplified with recoil starter; the pulley has rewind spring.

types are built as riding mowers, too, in which case the frame and engine are of sufficient capacity to carry the operator.

Harking back to some of the old weed-whackers, we find the faults which design and engineering have sought to eliminate in the new models. The old machines usually were moody about starting. Also, they sat on four equally-spaced wheels and, when they hit a little rise

WHEELS must be disengaged when starting engine; this is done with lever indicated.



in the ground, scalped it clean of turf. They'd swath along nicely until they hit a rock. Then, if it was a little one, they'd send it rifling back at the operator. A big rock might mean a completely ruined crankshaft.

Today, there's not a criticism leveled at the old clunkers that at least one manufacturer hasn't been able to checkmate. To start, let's consider what they've done about reducing noise. Lawn Boy's Quietflite is built on the "bottled sound" principle, like the Evinrude and Johnson outboard motors of the parent company. To isolate engine vibration from the handle and housing, the engine is mounted on rubber shocks and thick Fiberglas sound-trap material shrouds the power plant. Air enters from the front, hitting a baffle which deflects it from the ceiling to the engine. And the housing is die-cast aluminum, considerably "quieter" than steel. This keeps operating noise at the level of conversation and you can't hear it from 60 feet away. Quietflite is a 19-inch rotary priced at $114.50.

Many other mowers have mufflers to deaden the engine sound and lower it to a more pleasant pitch. Some build up back pressure and curb full power utilization. Larger mufflers don't seem to put as much of a lid on power as do the smaller ones. Shrouds of aluminum, Fiberglas or polyethylene, in addition to dressing up the mowers, tend to have some reducing effect on the engine noise.

Perhaps the next most dramatic development is in the vacuuming of lawns. The old idea of a lot of mulch being just dandy for all types and lengths of grasses is no longer fully accepted. A heavy build-up of grass clippings on a lawn tends to hold moisture close to the top and Mother Nature, being just as lazy as anyone else, puts on a shallow rooting program. With occasional dry weather, that type of lawn can burn up without excessive watering. At least three manufacturers are offering closed containers for capturing the cuttings, leaves and other debris their rotary mowers cut or suck up from lawns this year.

A cloth bag attached to an accessory chute is the container used by Toro with its 19-inch rotary, Whirlwind. On the wind tunnel principle, this machine sucks up grass clippings, stones, sticks

ATLAS-AIRE 24-in. rotary has a 3-hp, 4-cycle engine.

Atlas Tool and Mfg. Co., 5147 Natural Bridge Blvd., St. Louis 15, Mo.

SAVAGE 21-in. reel mower has recoil starter; $142.50.

Savage Arms Corp., Chicopee Falls, Mass.

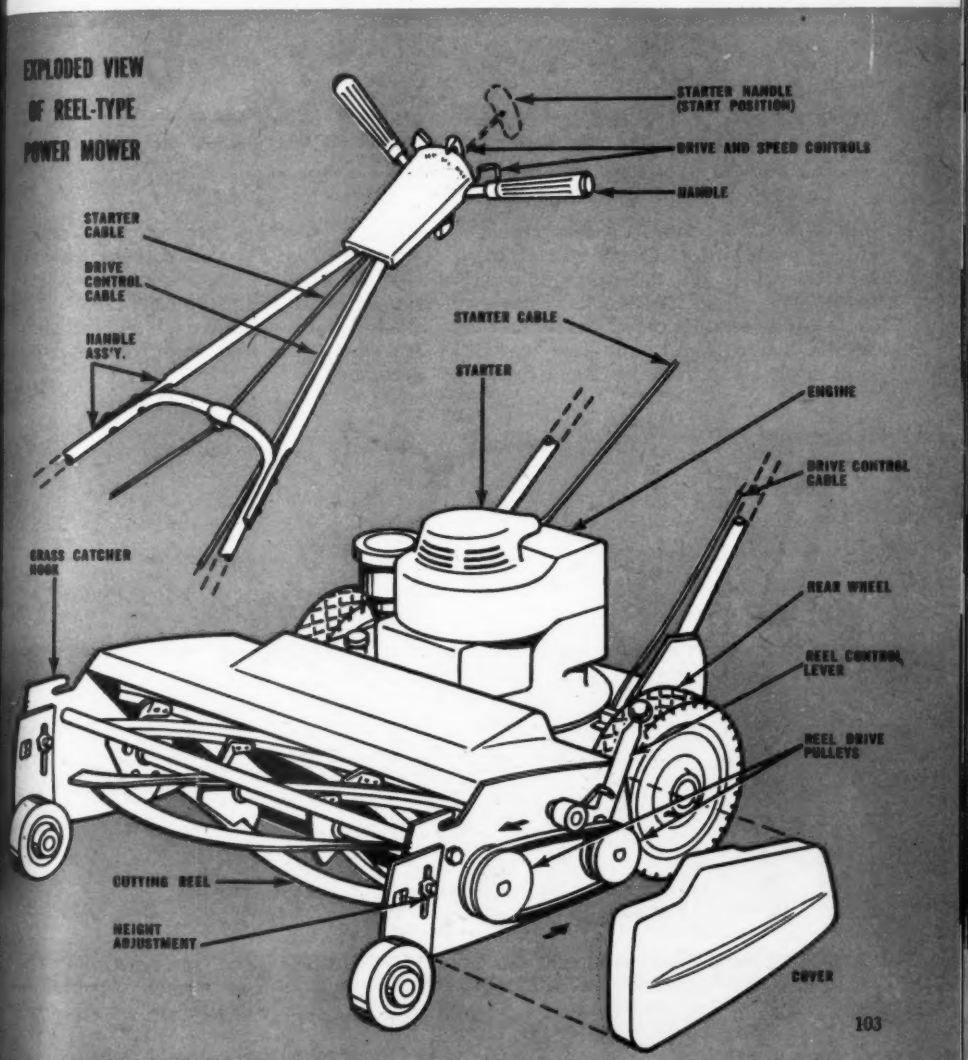
GREAT LAKES 24-in. rotary type has 3-hp engine.

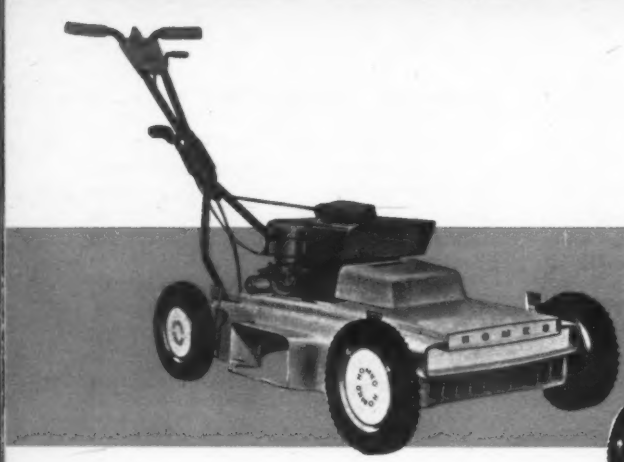
Great Lakes Tractor Co., 510 Hanna Bldg., Cleveland 15, Ohio

and debris. Mower, bag, chute and leaf mulcher carry a combined price of $89.95. A polyethylene box is used by Jacobsen on its $139.50, 18-inch Turbo-Vac. And Sensation's Mow-Blo machines discharge from above the blades into wide screen catchers on one side. Sensation offers an electric Mow-Blo at $135 and a gasoline model with turbo pump (air channel) at $90 to $110, depending on the motor, both in the 20-inch size. The vacuum of these types of machine freezes the blades of grass upright for cutting. They even cut damp, limp grass easily.

Vacuuming doesn't mean that the industry is about to abandon mulching, however. Almost every manufacturer offers a mulching attachment, either standard equipment or optional, for grinding up the leaves.

Electric starters have risen mightily in popularity and are much easier to operate. Bolens has Step-O-Matic starting. Just step down on the handle and, so the catalog says, "feel the engine spring





HOMKO'S 22-in. rotary has six forward speeds, a recoil starter and side discharge.

Western Tool & Stamping Co., Des Moines, Iowa

SCOTT'S electric rotary, $119.95, has a 50-ft. reel. Extra 125-ft. reel costs $29.95.

O. M. Scott & Sons, Marysville, Ohio

into action." Jacobsen's accessories include a push-button electric starter, battery operated, *and* a battery charger. Lawn-Boy offers an electric starter. Moto-Mower has its recoil starter on the handle, where hands and feet can be kept safely away from the engine during starting. Reo has an optional starter working from 117-volt current. Savage also has an electric starter as does Sensation. Those still using rope are usually the lower-priced units. GE sells an electric starting kit to fit most rotaries as an accessory.

LAWN-BOY Automower comes in two sizes: an 18-in. is $124.50 and a 21-in. is $134.50.

Lawn-Boy, Lamar, Mo.

MOW-MASTER 22-in. push-type rotary has "step-to-start" 2½-hp engine, costs $89.95.

Propulsion Engine Corp., 311 Marion Ave., S. Milwaukee, Wis.

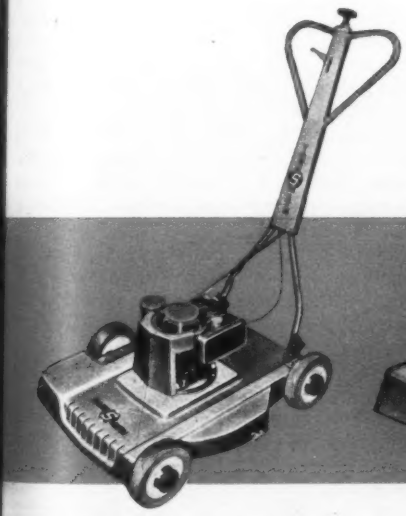
MOTO-MOWER deluxe 18-in. reel type has a 2-hp. 4-cycle engine. The cost is $119.95.

Moto-mower, Inc., Richmond, Ind.

SUNBEAM self-propelled electric reel mower is priced at $129.95. It cuts 20-in. swath.

Sunbeam Corp., 5600 Roosevelt Rd., Chicago 50, Ill.

And the prime bugaboo of all mowers of the past—the bent crankshaft? Here the mower builders have shown great ingenuity. They've shortened the shaft, dispersed the shock, put "give" into the blades and even improved the blades. Eska, for example, has an adapter that holds the blades in place on an extra-large drive shaft so that sudden shocks will not damage the crankshaft. Jacobsen employs a disk with four blade tips on its periphery. Unyielding foreign objects knock the blade tips behind the rim of the disk. [*Continued on page* 138]



YARDSMITH 19-in. and 22-in. rotaries are sold in 5 models from $79.95 to $139.95.

Yuba Power Products, Inc., 800 Evans St., Cincinnati 4, Ohio

CHOREMASTER'S 22-in. power-propelled rotary with fingertip control is $139.95.

Yuba Power Products, Inc., 800 Evans St., Cincinnati 4, Ohio

MINIATURE LAMP burns for about a minute as this simple storage battery discharges.

By Carleton J. Lynde, Ph. D.

Professor Emeritus of Physics, Columbia University

YOU can easily make a small storage battery that will light a 1½-volt lamp, ring a bell or run a toy motor—and you can do it with safe, easy-to-find, inexpensive materials. All that's required is a small amount of sheet lead, a few tacks, a strip of wood, a short length of wire, two dry cells and a tumbler or beaker of water.

Your first step is to cut the sheet lead into two 4x1½-inch strips. Then take a 4x1x½-inch strip of wood and tack the lead strips on opposite sides as shown in one of the photographs. Put one tack in each side first. The second tack on each side is used as a terminal for a nine-inch length of wire, so wrap the end of the wire under the head of the tack before you drive it in. Next dissolve a heaping tablespoonful of baking soda in a tumbler of hot water and lay the wooden strip across the top so that the lead strips are in the solution.

To charge your battery, you must connect the two nine-inch wires for five minutes to two 1½-volt dry cells joined in series. The last photograph shows how the wires are connected to accomplish this. When the five minutes are up, disconnect the wires from the dry cells and connect them to the terminals of a light, bell or toy motor. Your storage battery will operate any of them for about a minute.

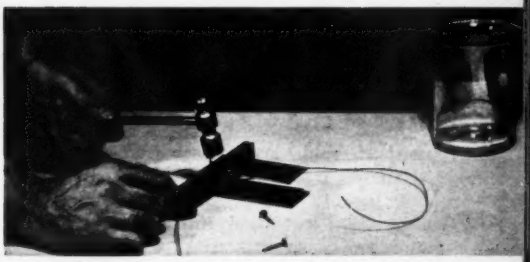
Here is what happens: Originally, each strip of lead has a gray coating of lead oxide (PbO) which is formed naturally from contact with the air. When the strips are connected to the batteries, one is connected to a plus terminal and the other is connected to a negative terminal; thus one is a positive strip and the other is a negative strip. The direct current from the batteries causes oxygen to be deposited on the positive strip and hydrogen to be deposited on the negative strip. The hydrogen combines with the oxygen on the negative strip

You can make and demonstrate a storage battery with safe, inexpensive and easy-to-find materials.

and takes it away, leaving lead (Pb). The oxygen combines with the oxygen on the positive strip and stays, making it lead peroxide (PbO_2). Therefore, one strip is lead and the other is lead peroxide and your storage battery is fully charged.

When you disconnect the wires from the dry cells and connect them to a lamp, bell or motor, your storage battery starts to discharge and the direction of the current, or the flow of the hydrogen and oxygen, is reversed. Then the hydrogen causes the lead peroxide (PbO_2) to change to lead oxide (PbO) and the oxygen changes the lead (Pb) to lead oxide (PbO). Thus both strips are once again lead oxide and your storage battery is fully discharged. You can repeat the process by recharging the storage battery with the dry cells. Naturally, with larger plates, you can draw more current. •

SHEET LEAD is cut into strips. It has a naturally acquired coating of lead oxide.



TACKS secure strips of lead to wood. A wire extends from one tack on each side.

BAKING SODA is dissolved in a beaker of hot water before immersing the lead.

CHARGE the battery by connecting the wires to two dry cells wired in series.

SPRUCE UP YOUR HOME

BATHROOM SHELF

By John Michaels

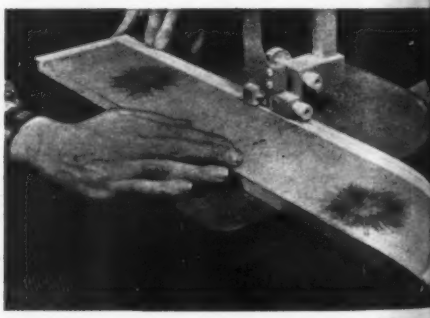
FINISHED SHELF is a handy adjunct to medicine cabi keeps those most-often-used toilet articles at your finger

SOLVE the problem of an overcrowded medicine chest with this simple shelf of ½-inch maple plywood laminated with ⅛-inch Acrolite, a colorful plastic sheeting into which has been pressed natural plant life and elegant fabrics.

Cut wood and plastic slightly oversize, coat joining surfaces with contact cement, then join them and sand the edges smooth. The shelf is attached to the backboard with flathead wood screws. Finish the job with three coats of clear lacquer brushed on the edge of the wood. •

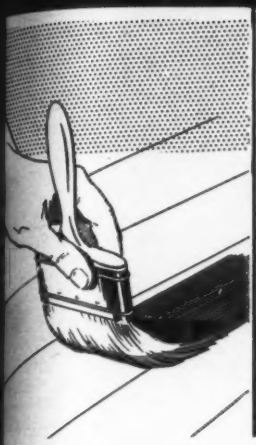
APPLY contact cement to both plastic and wood to assure a permanent laminating job.

BRACKETS fasten to threaded lead anchors recessed into predrilled holes in the wall.



OVERSIZE shelf is cut to proper size on bandsaw by following pencilled line on tape.

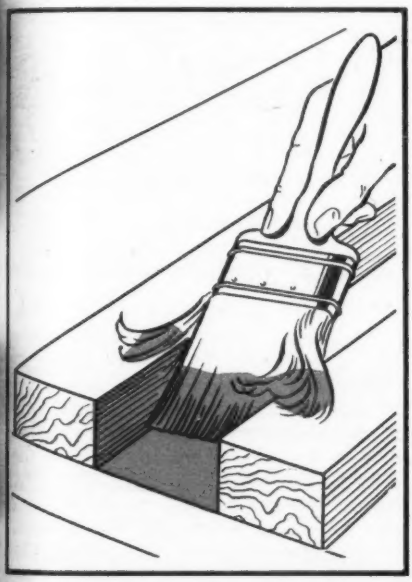
FRESH PAINT TIPS



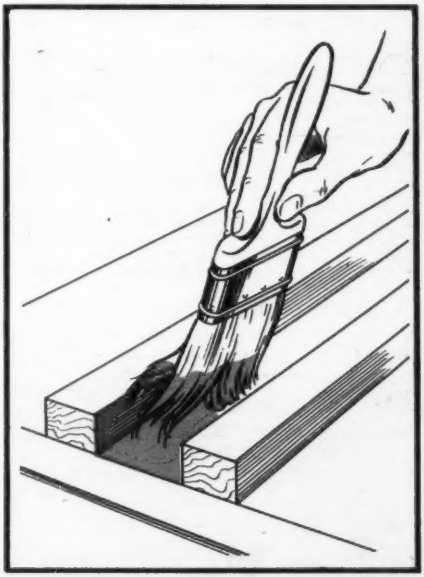
"SAMPSONS" ruin brushes by bearing down too hard, but pros use only the lower half of the bristles.

EXCESS PAINT is removed by drawing brush over wire fixed across can as shown; lips of can may cut bristles.

PIPE-STRADDLING kills brushes. Paint crosswise on round work or else use a roundhead brush on it.



DON'T FORCE a paint brush into corners, narrow openings or other recessed areas. Abuse of this sort will cause the bristles to curl and break away from the ferrule.

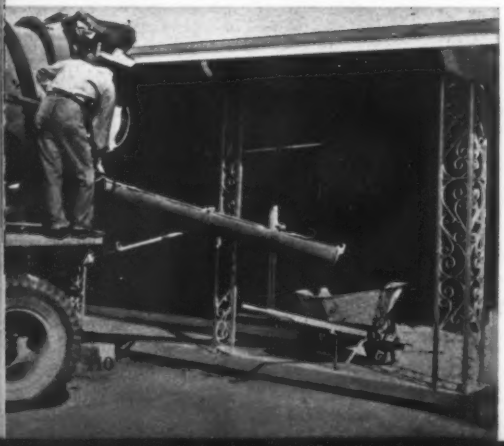


OVERSIZE BRUSHES "finger" and become useless if used edgewise to paint narrow surfaces and recesses. The first rule of painting is: the right brush for each job.

CONCRETE IN COLOR

Use colored concrete with taste and restraint and it will enhance the beauty of your home as well as improve the value of your property.

By David X. Manners



COLORING concrete for terraces, driveways or patios is a reasonably simple operation. Color can be added either at the time of mixing or after the concrete has been poured. By careful blending of two or more pigments, you can achieve almost any shade you want.

Some pigments are natural, others are manufactured. If given a choice, take manufactured (synthetic) rather than

READY-MIX suppliers are equipped to pre-color, deliver and pour concrete for you.

natural pigments—they're more durable.

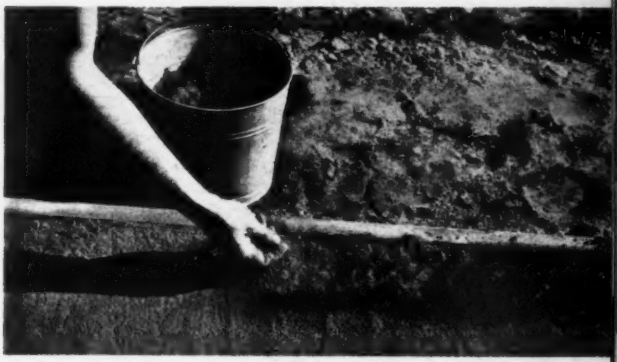
Pre-colored concrete can be bought from ready-mix suppliers, but this is quite expensive. One of the easiest ways of adding color is to dust it onto freshly placed concrete and work it into the surface with a wood float.

You can also buy prepared and bagged mixes of pigment, cement, and aggregate in standard colors. Only half a pound of one such mix, Colocron, is required to color a square foot. Dust on the mixture and then work it into the concrete with a wood float, stopping when the surface becomes wet. When surface moisture disappears, finish as for any other concrete job.

Stain is recommended for coloring existing concrete floors. Those that have been previously painted must be scrubbed [*Continued on page* 140]

CONTRASTING COLOR AREAS should be blocked out with a masonry grooving tool.

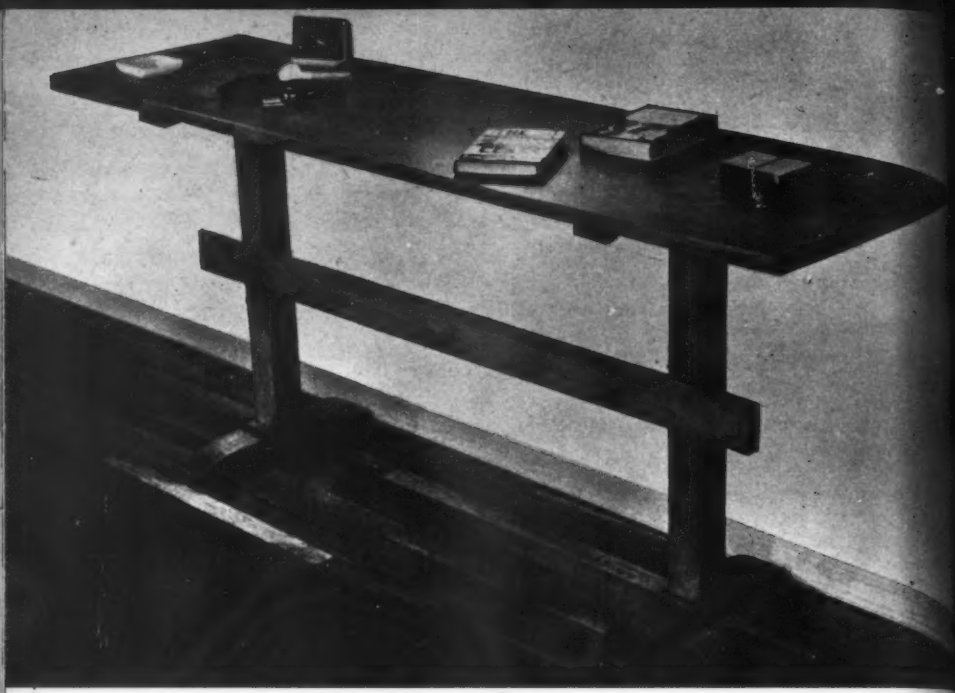
DUST-ON compound of cement and pigment is forced through a wire screen to mix; then sand is added.



COLORED MIX is spread on fresh concrete in one direction; then second dusting is carefully applied at right angles to first.

WOOD FLOAT is used to work the dust-on coloring into the concrete.

BEFORE STAINING concrete floors, scrub them with a trisodium phosphate solution.



TRESTLE TABLE

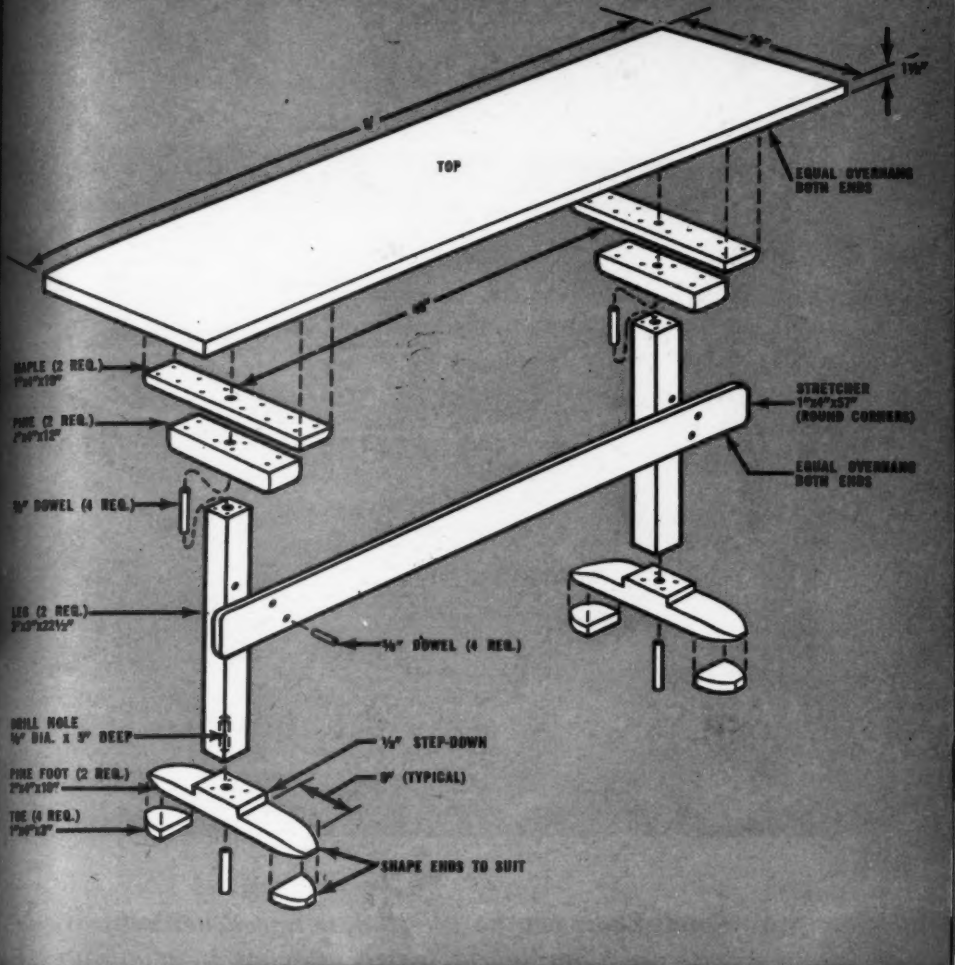
IF the world's oldest something-or-other intrigues you, this is a project you'll want to tackle. It's based on the world's oldest regular dining table. Before the trestle, gourmets had to settle for a board on a frame.

A great thing about this table is its adaptability. Lengthen the feet and you can widen the top. Add legs and you can extend it indefinitely. Or consider the results with fine woods, an apron beneath the [*Continued on page* 144]

SMOOTHING down the foot and toe assemblies with fine paper.

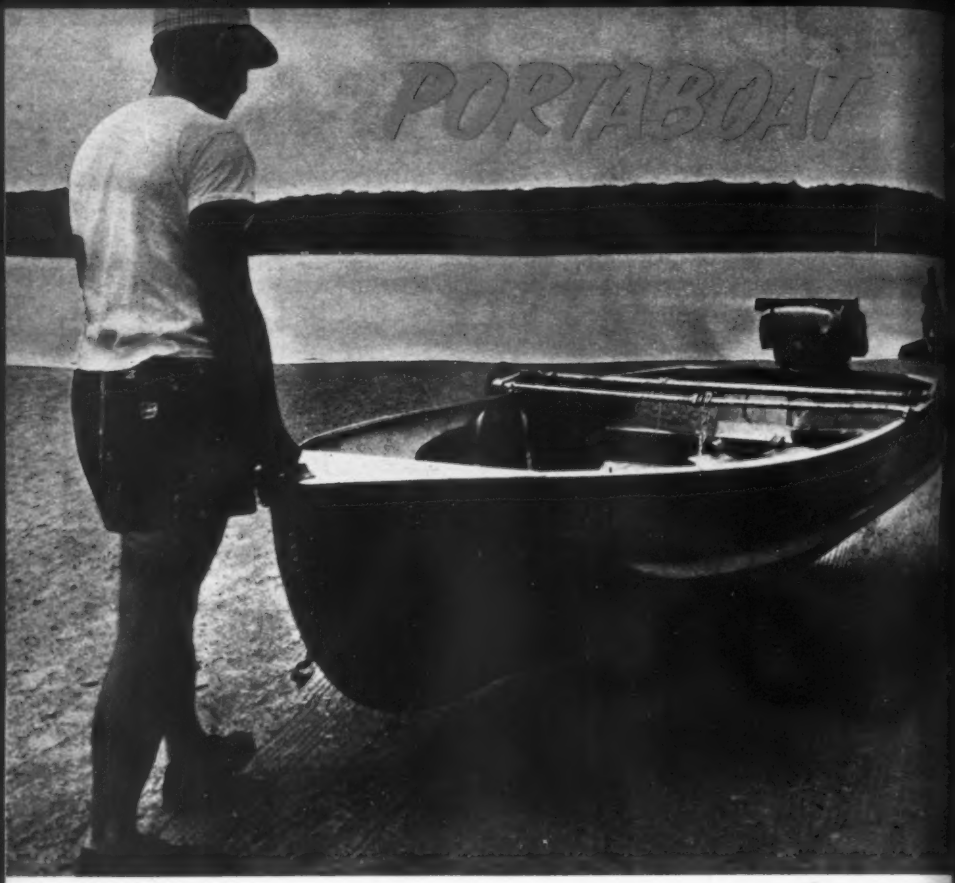
CROSSPIECE is fastened temporarily for alignment.

BORING through the maple and pine crosspieces.



TAKE CARE to align dowel holes properly before proceeding with final assembly.

MOUNT FEET last; then bore through for hardwood dowels which add strength.

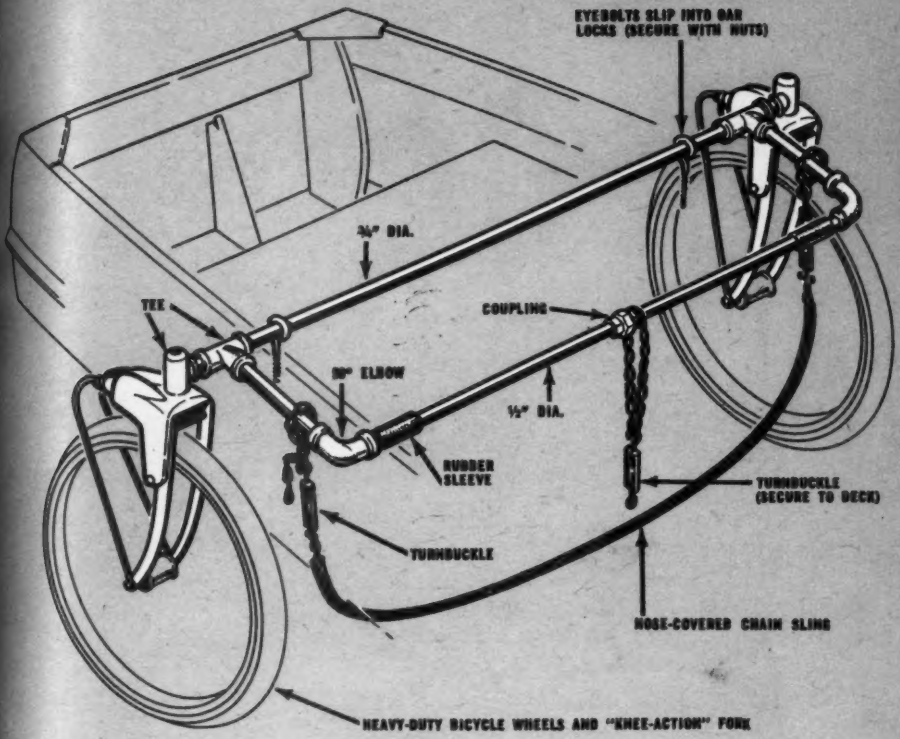


Small boats can be wheeled or towed behind a car with this simple rig which attaches in a minute.

By Arthur H. Nellen, Jr.

WANT to make a lightweight boat mobile without buying an expensive trailer? The Portaboat attaches in 60 seconds and you can trail the boat behind a car or wheel it for short distances by hand. The one illustrated was built for an 85-pound, 12-foot boat but should be satisfactory for boats up to 125 pounds. For heavier boats, forks of greater capacity should be used—preferably those from motorbikes.

Making the Portaboat is easy. If you have a welding outfit, you can do the entire job yourself; otherwise, a local shop will do the necessary welding for a few dollars. The rectangular pipe frame should be about four inches wider than the distance between the oarlocks and the short sides should be about 12 inches long. The forks are from 26-inch bikes and are fitted with heavy-duty wheels and tires. After removing the handlebars, reduction tees are slipped over the stems of the forks and welded in place. These then serve to couple the pipe frame to the forks. Reduction tees are also welded to the main pipe of the frame but the [*Continued on page* 173]



TEE is welded to the stem of the fork to accept the end of ¾-inch pipe crosspiece.

HOSE-COVERED chain sling is attached to frame, passes under boat for support.

COMPLETED AIR COMPRESSOR mounts the motor and compressor unit on 35-gallon tank.

AIR COMPRESSOR

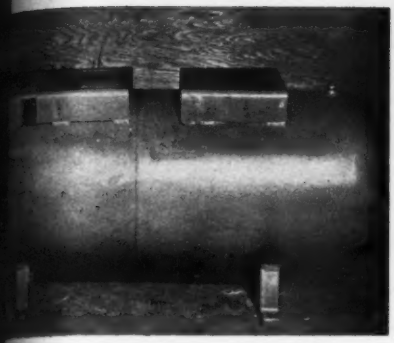
How to make an air compressor using parts from a mechanical refrigerator.

By Richard Hanson

HAVE you ever thought, "Gee it's a shame to throw away this old refrigerator. There must be some way it can be made into an air compressor." There is.

Your first step will be to get hold of a good used air tank. These can usually be obtained from used-machinery dealers for $2 to $10. The tank pictured above has a 35-gallon capacity.

If you haven't a refrigerator to discard, visit a commercial refrigerator shop to pick up a used compressor at a cut-rate price. Check the compressor

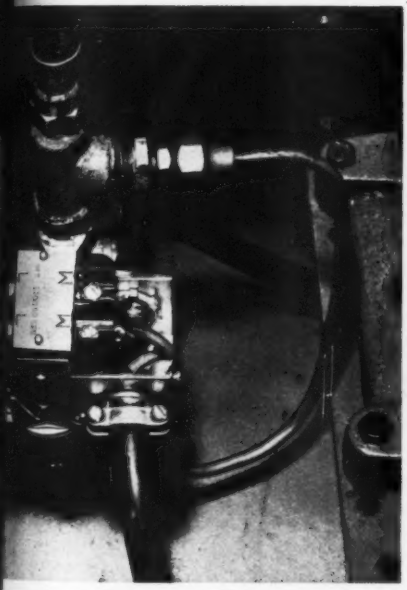


EL PLATFORMS welded to top of air k support the motor and air compressor.

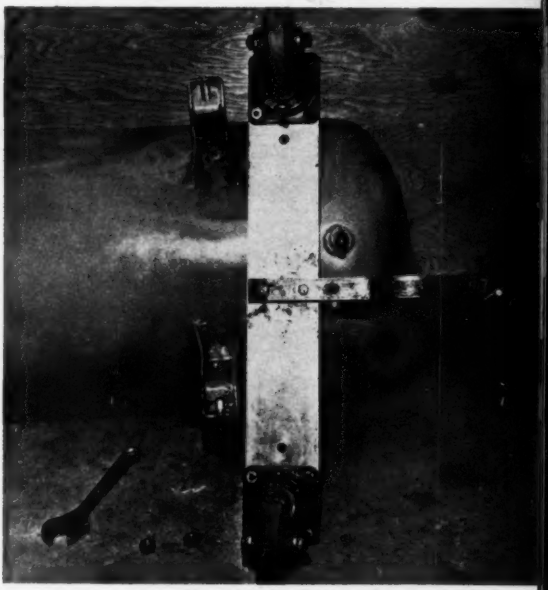
THOROUGHLY CLEAN valves and head of compressor; if worn, replace the valves.

refully and flush the crankcase with el oil or a good detergent. Clean the ead valves. If the valves are worn, re-ace them with new ones. A compres-r usually has an oil filler plug on its de; if not, drill and tap it to take a ⅛-ch plug. Add enough No. 20 nonde-rgent oil to the crankcase to splash-lubricate when the unit is operating.

You can make an air filter from an oil can by punching holes through the can, then filling it with lightly oiled filter material taken from an automobile air cleaner. The can is then soldered to a nipple long enough for the filter to clear the compressor.



PRESSURE SWITCH is adjustable to 200 lbs. psi. Unloader pipe is shown at right.

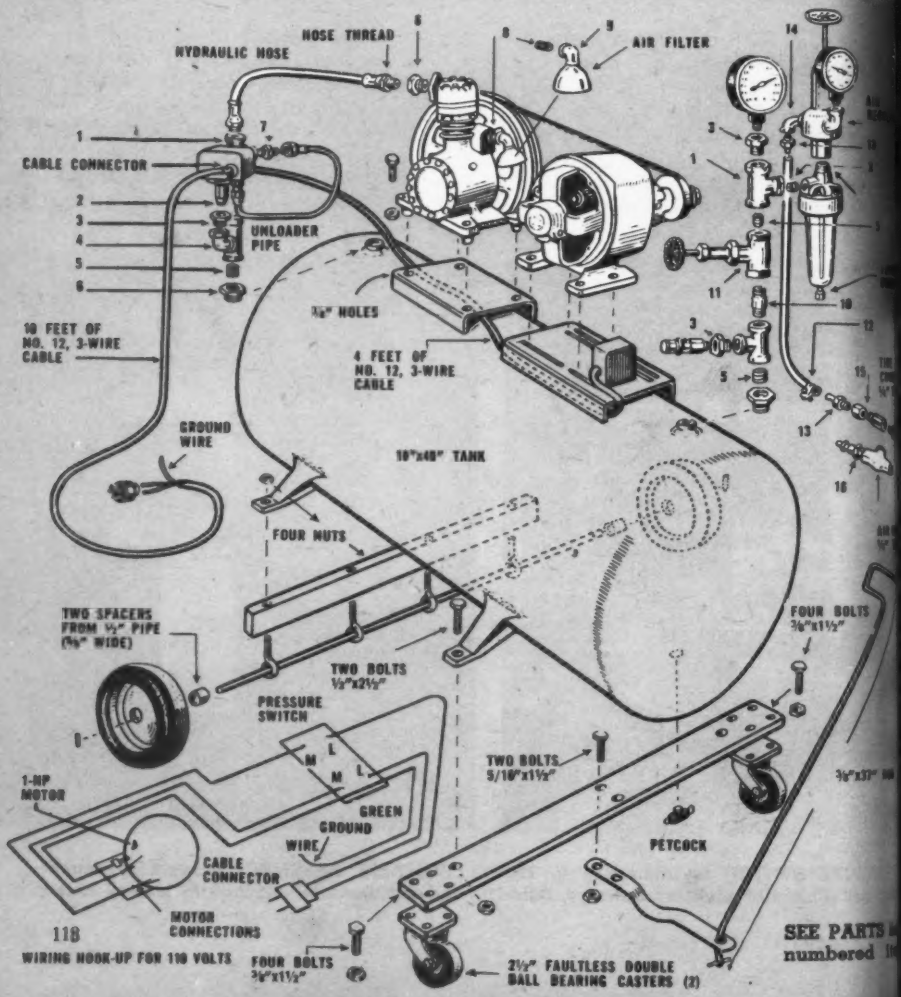


FRONT-END ASSEMBLY shows how casters and tow bar are attached to legs of tank.

PRESSURE SWITCH lets compressor restart easily by releasing air when motor stops.

Wheels and casters. Fit a piece of grooved hardwood to the rear legs of the tank to hold the axle in place by means of eyebolts. Bolts near the end of each leg hold the axle to the tank. Use five-inch wagon wheels on this rear axle. The front casters are bolted to a piece of heavy, flat iron which is itself bolted to the front legs of the tank. The tongue for the rig is fashioned from a length of ⅛-inch steel and bolted to the front bar. The towing handle is of ⅜-inch 37-inch steel rod.

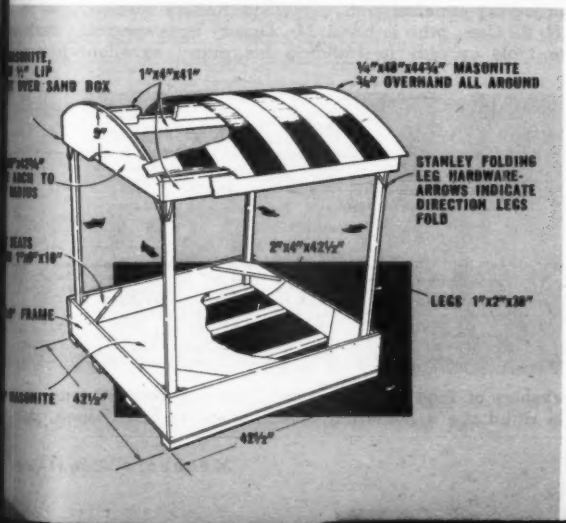
The compressor is now placed on the steel platform atop the tank. Be sure the flywheel clears the tank; if it doesn't, raise [*Continued on page 137*]



WIRING HOOK-UP FOR 110 VOLTS

UNIQUE TOP shades Junior from sun, can be lowered over box to keep sand dry in rain.

SAND BOX



THIS new design in sand box construction incorporates a double-purpose top. When the sun is shining, Junior is shaded; when it rains, Mom or Dad can fold the legs under and lower the top to keep the sand dry.

The Masonite top is easily bent if it is wet thoroughly on the screen side and kept moist for 24 hours before its application. Screws should be used to secure the Masonite to the frame. •

Golden Hammer Award Winners

GRANDFATHER CLOCK is mahogany-paneled with gumwood Roman numerals. It was built by R. B. Gandy, St. John, N. B., Can., who is blind. Mr. Gandy uses specially devised stops and guides on his power tools as aids in building his many excellent projects.

PANORAMIC VIEW of the workshop of Fred Nies, Hamburg, Iowa, shows all four walls. Against the shop's walls (left to right) are a soldering bench, woodworking bench, paint

Each craftsman whose project is shown receives a 24-karat gold-plated Hammer and a Workbench Award Certificate. Runners-up will be sent a beautiful gold-plated Golden Hammer Tie Bar or MI's Certificate of Merit. So send us some *black-and-white photos, with negatives,* and a full description of your latest project. Photos of your workshop are also eligible. Send all entries, with return postage, to MECHANIX ILLUSTRATED Golden Hammer Awards, 67 West 44th St., New York 36, N. Y. Entrants are advised that MECHANIX ILLUSTRATED cannot accept responsibility for customs charges, duties, taxes, etc., levied against Golden Hammer and Golden Hammer Tie Bar winners outside the United States.

The following craftsmen have been awarded GOLDEN HAMMER TIE BARS for their projects: Louis A. Cassella, Orange, Conn.; Jesse J. Wheelock, Waisenburg, Col.; Al H. Hambleton, Alton, N. Y.; Stanley L. Courtney, Camp Hill, Pa.; Albert DeLaura, Detroit, Mich.; Franklin J. Cortese, Houston, Pa.; Edwin Minatra, Columbia, Tenn.; Howard Hargrove, Lawrence, Kan.; A/2c Norman Kalig, Ellsworth, S. SOLDERING POT

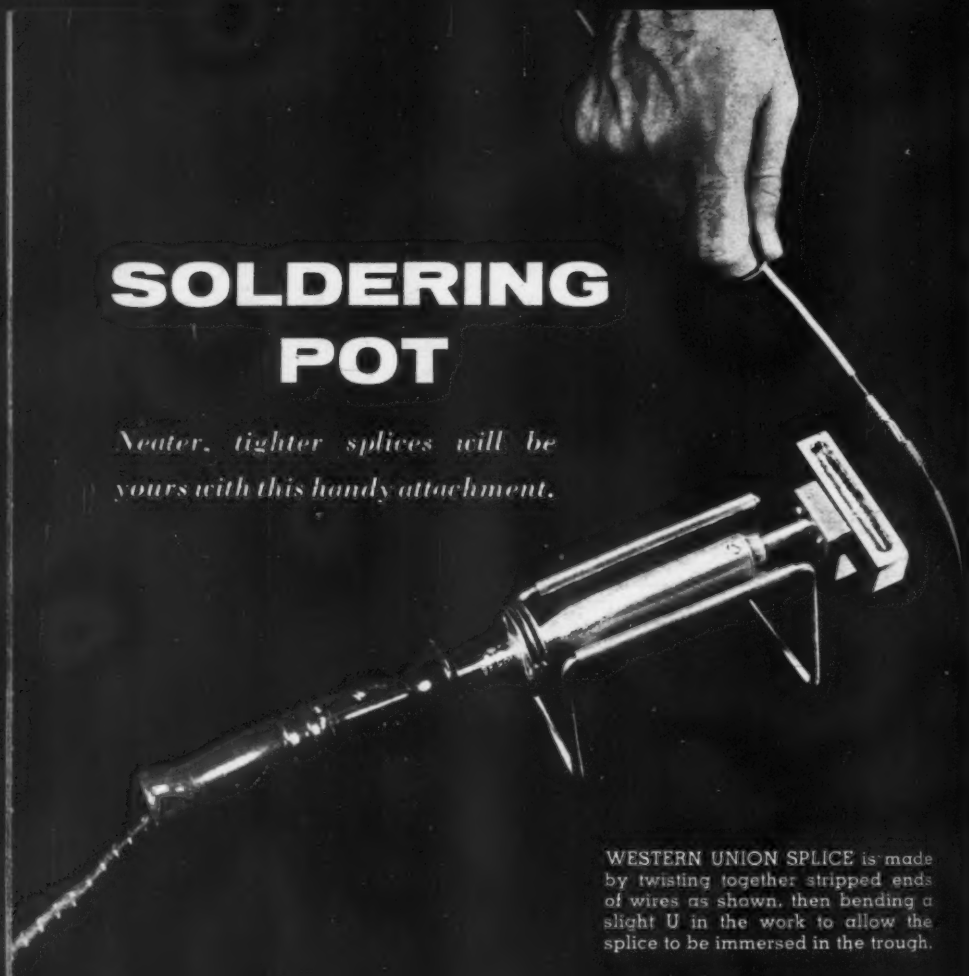
Neater, tighter splices will be yours with this handy attachment.



WESTERN UNION SPLICE is made by twisting together stripped ends of wires as shown, then bending a slight U in the work to allow the splice to be immersed in the trough.

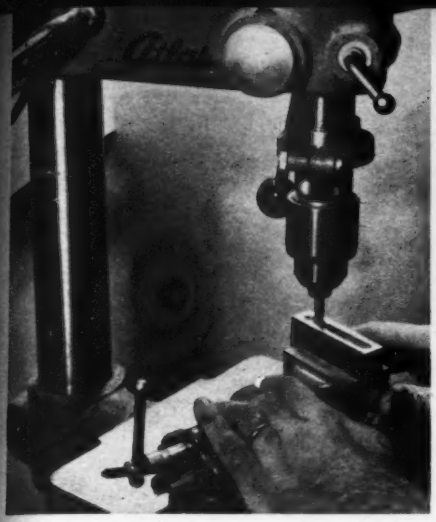
By R. J. Capotosto

THOSE of you who do a considerable amount of your own electrical work around the house will especially appreciate this novel soldering pot attachment for your soldering iron. With it you will be able to make soldered pigtail or Western Union splices with a perfection you never thought possible.

The pot is made of brass and will work on any standard 100- to 125-watt iron having a replaceable tip. These irons usually have a ⅜-inch tip which is held in the heating chamber with a setscrew. To attach the pot, simply loosen the iron's setscrew, remove the regular soldering tip and insert the pot.

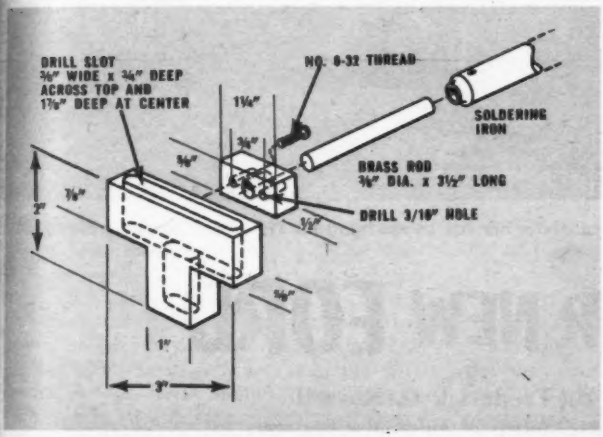
Shaped like the letter T, the pot's vertical leg is drilled to accept pigtail splices; the horizontal trough is used for Western Union splices.

To make the unit, drill a series of ⅜-inch holes ¾-inch deep into a bar of ⅝x2x3-inch brass. Now replace the drill bit with a rotary file and break through



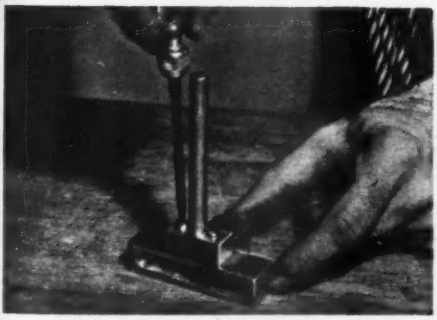
ROTARY FILE fits in drill press chuck, breaks through drilled holes to form slot.

BOTTOMING TAP must be used to thread shallow holes in side of the soldering pot.



the holes to form a slot. Keep sliding the work back and forth so that the action of the file will make the slot smooth and straight. Two 3/8-inch holes are then drilled in the face of the stock and a hack saw cut made to drop the corners to form the T.

Drill and tap two holes for the [*Continued on page* 146]



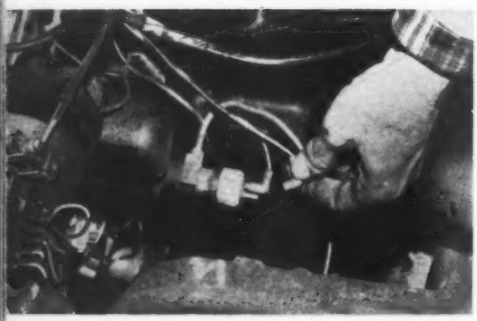
HEAT-CONDUCTING STOCK is fastened to soldering pot with roundhead brass bolts.

INSERT BRASS ROD as far as possible into the iron before tightening setscrew.

NEW FORD OWNER will learn about his car by studying his 1959 Ford Car Shop Manual.*

YOUR NEW FORD

By Frederick C. Russell
Member, Society of Automotive Engineers

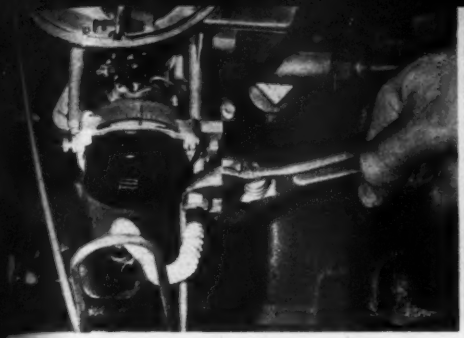


TAIL LIGHTS that don't function may be traceable to detached bullet connectors.

FROM Tin Lizzie to Thunderbird in slightly over three decades is quite a leap. So it stands to reason that anyone who buys one of Ford's 1959 jobs is missing a good bet if he does not follow up his purchase with the best in service.

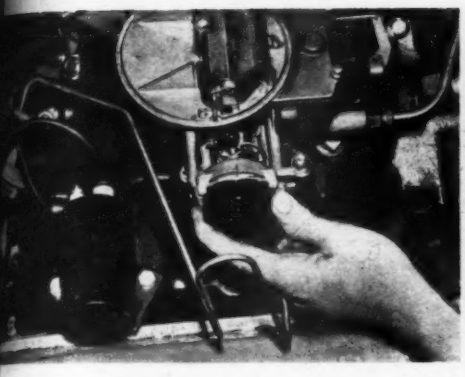
This year the company's engineers have done a number of things to make their cars easier to maintain. They've added a dye to the automatic transmission fluid so that leakage won't be confused with oil from the engine. The new Ford engines carry a production thermostat with a 175° to 180° range so that it is not necessary to change stats for winter and summer unless alcohol anti-

*Available from Helm, Inc., Ford Publications Dept., 3000 East Jefferson Ave., Detroit 7, Mich. $3.50.

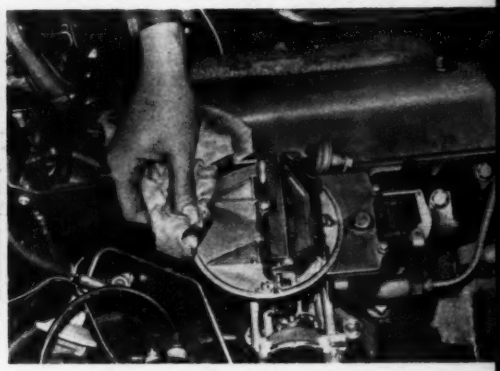


TIGHTEN the warm-air intake couplings to insure efficient operation of carburetor.

IN WARM WEATHER disconnect hot-water line by closing the petcock at the engine.



TURN thermostatic spring housing right for a lean mixture, left for a richer one.



SAFEGUARD carburetor repairs by wiping dirt and grime from all the working parts.

freeze is used in cold weather. And this year's Fordomatic transmission has 105 fewer parts because it has only two forward speeds. That means fewer repairs when age sets in, even though this arrangement can be less economical on gas for a driver who allows his car to run too much in low gear.

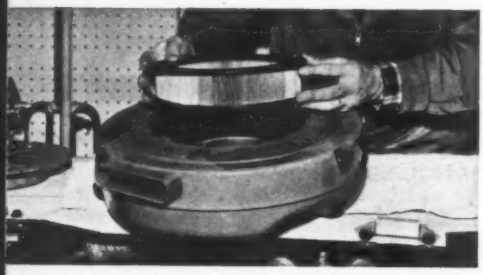
And here are some more features on the current Fords which make for easier servicing. Owners will like the wiring plug which disconnects on the engine side of the firewall and which eliminates the need for stringing wires through the wall. The neutral switch used with the automatic transmission is mounted on the steering box where it's easy to reach. Getting at the manual linkage for the automatics is also a simple job. Fewer muffler replacements should be required now that the new Fords carry aluminized mufflers which are said to last twice as long as previous type mufflers.

The new-type enamel now used on the body finish is said to require no waxing for the life of the car; however, if a car is to be used in a hot, humid climate, some waxing would be desirable. Waxing *is* necessary for the preservation of the chrome trim.

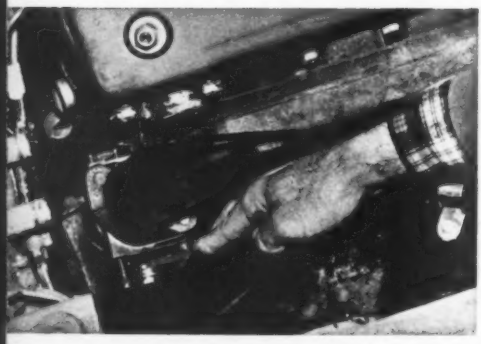
The new Ford nonslip (limited slip) differential—named Equa-lock—is not adjustable and, like those used on other makes of cars, requires a special lubricant.

It would have been easier for all concerned if Ford had elected to refer to their several engines as A, B, C or D —or even Ann, Bess, Cynthia and Dora as the weathermen endearingly refer to hurricanes. As matters stand the Ford buyer is faced with the business of being asked whether he wants the Mileage Maker Six with the 223-cubic-inch-

ALWAYS disconnect heater hose at the water pump when refilling cooling system.



CLEAN your Ford's dry-type air cleaner every 5,000 miles, replace at 10,000 miles.



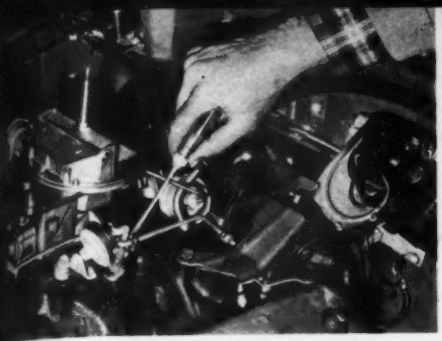
BE SURE spring of manifold heat control valve is properly hooked on its stop pin.

displacement motor, the V8 292-cubic-inch standard engine, the V8 332-cubic-inch optional engine or the 352-cubic-inch engine which is the power option for all V8 models. This last-named engine is standard for Thunderbirds and Galaxies and there's also a 430-cubic-inch V8 as a power optional for the T-bird. In the order given these engines have horsepower ratings of 145, 200, 225, 300 and 350. Because of a slight drop in compression ratio the horsepower of the 292-cubic-inch engine has been lowered a little. In the 332-cubic-inch job the hp drop is 40. That's why you'd be smart to select the 352-cubic-inch engine where power steering, air ride and air conditioning are specified.

Ford buyers will want to think seriously about specifying the Cruise-O-Matic transmission which is continued over from last year. It's a three-forward-speed dual-range job. Also keep in mind that the Fordomatics come in four models which team with the Six and the three engine sizes in the V8 line (not all the parts are interchangeable). There also are two converters: one for the Six and the small V8, the other for the larger engines; these can't be taken apart for servicing. Fordomatics take ten quarts of oil except for the larger engines which call for 10½ quarts. The manual-shift transmissions require only three pints of lubricant. If overdrive is added, four pints will be required for the 352 and the 430 engines.

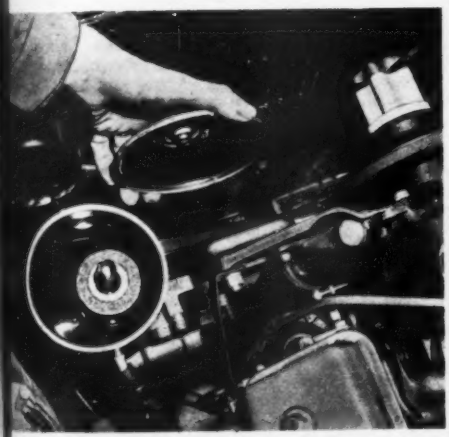
Check the oil level in the Fordomatic transmission every 1,000 miles with the engine idling and warmed up. Move the selector lever through all positions and then place in Park. Clean all dirt from around the transmission's dipstick and don't overfill. Ford says to drain and refill Fordomatics every 24,000 miles, but experience has shown that where a car is used excessively in 'round-the-town driving the automatic transmission takes quite a beating. This can be offset to some extent by more frequent oil changes.

As regards the engine, this year Ford joins Chevrolet in recommending engine oil changes only every 4,000 miles. This has been [*Continued on page* 136]



HARD SHIFTING may be due to nothing more serious than a too-fast idling speed.

IDLE ENGINE when checking Fordomatic oil level—and check it every 1,000 miles.



RENEW the filter element of your Ford's power steering reservoir every 20,000 miles.

SERVICE TIPS

from Detroit

Changes in the Torqueflite transmission used with the Plymouth Commando 361-cubic-inch engine may make the first-to-second shift too sharp unless the throttle linkage and pressure adjustments are corrected.

If the light bulbs of the front parking and directional signal light housings of your 1958 or '59 Rambler corrode in their sockets, it is due to moisture entering the housings. Remedy this by re-routing the leadin wires at the rear of the assemblies so as to loop downward to provide an entry upward into the socket assembly. Gravity is thus used to help prevent moisture from entering.

Trouble in restarting a hot 1958 Ford engine (equipped with Ford carburetor) can be checked by reworking the carburetor so that the acceleration pump bowl is vented to the float bowl. Your Ford dealer can make the necessary alteration.

Power brake pedal height on the 1959 Chevrolet is adjusted by rotating the clevis on the pedal end of the push rod. Minimum pedal height (measured from the top of the floor mat to the top of the pedal pad) should be 4⅞ inches on Biscayne and Bel Air models and 4⅝ inches on the Impala.

If engine vibration occurs with the 59S Lark cars equipped with Flightomatic transmission, Studebaker recommends installing engine mounts of 40 durometer material at the front. They carry parts No. 1548274.

On cars built since November 15, 1958 the dipstick has been omitted from the filler cap on all Plymouth power steering pumps. To take a look at the oil level, simply remove the filler cap. The oil level should be at the bottom of the filler neck if the engine is cold; halfway up in the filler neck if the engine is hot.

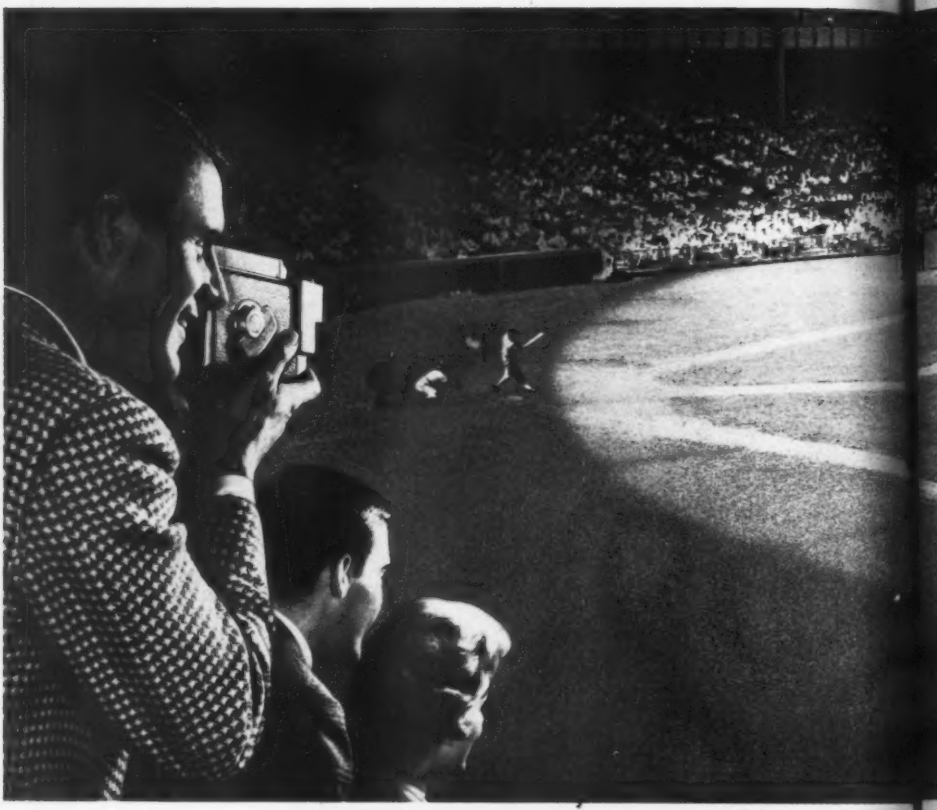
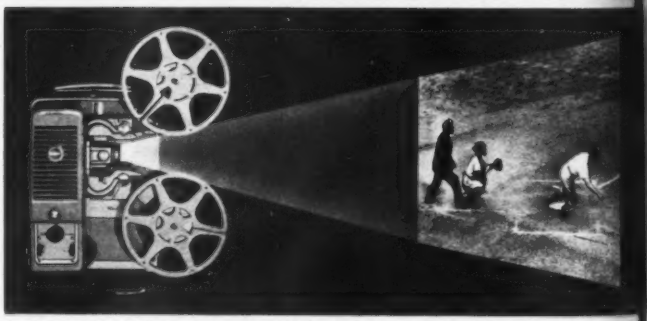
NEW FROM KODAK—

Beautiful movies automatically-f



New automatic Kodak Cine Showtime Projector, Model A20, threads itself right onto the take-up reel—and starts show automatically! Has fast *f*/1.6 lens and new high-lumen lamp for brightest 8mm projection *in Kodak history*. 400-foot reel capacity. Only $137.50. Model A30 has variable-speed control, operates on AC or DC. Comes with Kodak Presstape Movie Splicer. $167.50.



See "The Ed Sullivan Show" and "The Adventures of Ozzie and Harriet"

ally-from start to finish!

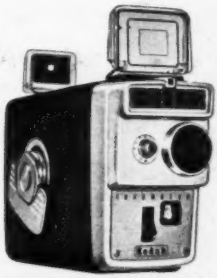
New Kodak Cine electric-eye-controlled cameras give you correctly exposed movies every time. New Kodak Cine projectors actually thread themselves . . . right onto the reel!

Now you're free to follow the action wherever it leads . . . without stopping to reset the camera lens! Imagine being able to film a subject moving from sunlight to shadow without taking your eye from the viewfinder—confident that every frame of color film will turn out beautifully exposed.

These new Kodak Cine cameras let you do just that. In bright light . . . in shade . . . indoors, their sensitive electric-eye meters constantly measure the light and *automatically* make the proper lens adjustments for you.

Perfect companions to the new Kodak Cine Automatic Cameras are the superb new automatic Kodak Cine Showtime Projectors. They thread themselves completely, then start the show . . . *automatically!* You see your movies brighter than ever before. This is movie equipment your photo dealer is *proud* to demonstrate! Visit him today.

New 8mm Kodak Cine Automatic Turret Camera, f/1.9, has electric eye that automatically adjusts lens to any light. Yet, you can lock the lens opening at *any desired setting*. Comes lens-equipped for regular, wide-angle, telephoto shots. True telescopic viewfinder, built-in "Type A" filter, low-light-level signal. $124.50. (Single-lens model, $92.50.)



New 8mm Brownie Automatic Movie Camera, f/2.3, with electric eye that automatically sets the lens for you—indoors or out. Adjusts for ASA film indexes 5 to 40. Has multi-frame finder, accepts auxiliary Kodak wide-angle and telephoto lens converters. Never before an automatic movie camera priced so low. Only $74.50.

Most dealers offer terms as low as 10% down. Prices are list, include Federal Tax, are subject to change without notice.

INTERLOCKING FORMS make four one-foot blocks two inches thick. Grease wood that contacts cement.

PATIO BLOCKS

Make your own cinder blocks by using the ashes from a coal-burning furnace.

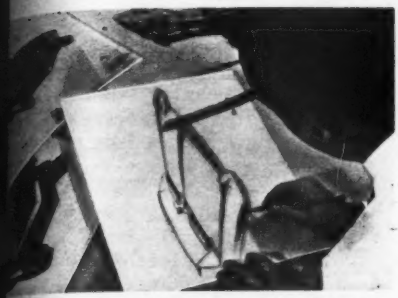
MIXED with a little sand, cement and water, those cinders you collect from your coal-burning furnace will provide the basic ingredient for durable, colorful patio bricks and terrace blocks.

Once you have the ingredients ready, all you need is the wood forms. These can be the nailed-together kind or the re-usable type which fit together like the sections of a Chinese block puzzle. The forms are easy to make and can be used over and over again. Two-inch-thick wood stock will mold blocks strong enough for patio use.

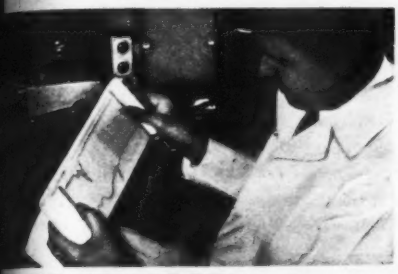
Making the blocks. Measure out quantities of cement, sand and gravel (or well-washed anthracite cinders) in a ratio of 1:2:3 respectively. Use a wheel barrow or old metal tub for mixing. Add a coloring agent if desired. Next, add water to the mix until a workable consistency is achieved. Finally, pour the concrete into the (greased) forms and allow at least one week to dry. By the way, forms can be made in any shape—square, round, rectangular, oblong, etc. About 25 of these blocks can be made for less than $5.00. •

MIX is packed into forms set on greased fiberboard. The blocks should dry for a week before being used.

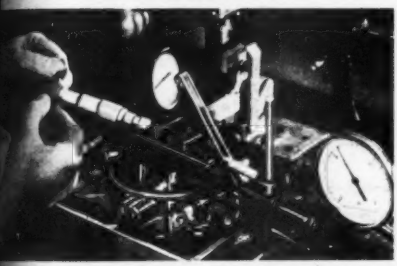
HOW AMERICA'S NUMBER ONE CARBURETOR SHAPES NEW-CAR PERFORMANCE AND STYLING!



...dern automotive styling calls for lower hood lines. This means ...ester-GM Carburetors must be designed to accommodate these ...ges and still perform their many jobs with accuracy and precision.



...e many demands put on a carburetor by accessory systems ...ake advanced research to keep pace with automotive progress. ...omy and performance must always remain at their peak.



...ne-quality precautions are taken in the manufacture of your ...ester-GM Carburetor to assure reliable, trouble-free per-...ance. For example, every carburetor is 100% tested.

Your Rochester-GM Carburetor must perform eighteen separate functions, such as providing vacuum for power equipment, in addition to its vital job of metering fuel. This means the carburetor must be designed and researched to meet today's many engine requirements. In addition, Rochester-GM Carburetor design leads the way to lower hood lines and today's smart styling. Such a complex and important part of your performance system requires skilled maintenance. That's why it's always wise to take your car to a Rochester-GM Carburetor specialist for periodic care. He's factory-trained in servicing your carburetor to give peak performance and economy. See him today.
Rochester Products Division of General Motors, Rochester, New York

Factory-trained Rochester-GM Carburetor specialists are trained by experts in the most modern methods of servicing your carburetor for maximum fuel economy and performance.

ROCHESTER CARBURETORS

[*Continued from page* 128]

taken to mean that oil-filter efficiency now makes possible the wider spacing of oil changes, an assumption that should not be taken too seriously since filters do not take out diluent. The way some cars are driven in winter an oil change every 1,000 miles is an important engine protection.

When replacing the oil filter on the 292 cubic inch V8 engine don't forget to coat the gasket on the new filter with oil. Hand tighten the unit until the gasket contacts the adapter face and then advance it one-half turn. Fast idle the engine for five minutes to make sure no leakage develops. On the 332 cubic inch and 352 cubic inch V8's the mounting is different. Here sealer is applied to the new adapter plate gasket. While you're at it, clean the adapter filter recess and adapter gasket surfaces. Ford advises changing the oil filter and cleaning the crankcase ventilating system and air cleaner at each 4,000-mile oil change.

Engine oil should be SAE 20 or 20W for temperatures above 32° F. From 32° above to 10° below zero use SAE 10W oil. Us 10° below zero SAE 5W oil is rec mended. Of course, multiviscosity such as a 10W-30 can be used at temp tures above minus 10°. Below that te perature this type oil should be 5W-20

A few additional notes should make your new Ford a better friend the Folo-Thru starter drive needs cle ing, use kerosene but do *not* oil. If yo Ford is to be used in a warm climate battery, fully charged, should have e trolyte of only 1.260 specific gravity. H initial engagement of the transmission Drive, Low or Reverse probably indic an incorrect idle speed or else need checking the throttle linkage. For h Select-Aire or the Polar-Aire condition use only Refrigerant 12.

Judging by the reports of satisf owners, the bugs are out of the 1959 Fo Don't put some of your own into your n Ford by not bothering to understand yo car's particular service needs. •

SPEND THE REST OF YOUR LIFE ON Velvet

YOU'LL WIN TWO WAYS!

YOU'LL WIN PURE PLEASURE. In time of stress, in perplexi in the quiet hour with good books, "when good fellows p together," afoot or on wheels, afield or afloat—a pipef of smooth-burning Velvet is a man's best friend.

YOU MAY WIN UP TO $25.00 simply by describing the pleas you get from Velvet. After enjoying a few pipefuls of Velve send us your description of that wonderful Velvet flavor, 25 words or less. We'll pay a dollar a word (up to $25.00 for the best description received each month. Mail yours Velvet, P. O. Box 63, New York 46, N. Y. A statements become the property of Liggett Myers Tobacco Co. All About Power Mowers

[*Continued from page* 105]

Keen uses an engine shaft protector plate bolted to the bottom of the mower base, eliminating better than 90 per cent of crankshaft bending. Lawn-Boy reports that their mower has a guaranteed non-bendable crankshaft which is achieved through the introduction of the shock mountings on the engine and a closely coupled muffler attachment to assist in the transmission of shock from the point of impact through the housing instead of twisting the crankshaft.

Reo uses Austempered steel blades which absorb sudden shock without harm to drive shafts. In fact many manufacturers use Austempered blades and shear bars. Sunbeam explains that Austempering is a trade name for a heat-treating process which produces a uniform hard and tough crystalline structure in the steel.

Toro's low silhouette and low center of gravity on its 1959 models make it possible for them to use a one-inch crankshaft in contrast to the average three-inch, making it much tougher to bend. The Austempered blade of Yuba's Choremaster has a safety shear clutch to protect the engine from damage.

Now to the matter of that old tendency to throw stones. Get 3,400 or more rpms into a 24-inch rotary blade and the tip is bucketing along at something like 400 miles per hour. It is generally regarded as inadvisable to field even a softball going that fast. Today, virtually every manufacturer has the housing descending well below the blade level. They've set their outlets for the grass clippings (and any stray missiles the blade rustles up) to one side and usually to the front. Some of them are using two or three shorter blades working side by side. When there are two, they're both driven off the same shaft. When there are three, the larger center one is directly driven and the two outer ones are belt driven.

Most manufacturers feature staggered wheels in 1959, which is mower talk for "they moved the right front one back far enough to leave room for the grass discharge chute in front of it." Lawn-Boy goes a little farther than most of the staggered-wheel users. They've set the left front wheel as an activated pilot wheel with a spring-loaded design.

Another turf saver is Reo's use of front-wheel drive, letting you rear the mower up for turning without digging a divot. Toro uses a wide disk below the blade to prevent too-close mowing. Yazoo has very large wheels to prevent the mower from bogging down in soft turf and to facilitate sharp turns. McDonough's Snappin' Turtle has, in contrast, no wheels at all. It just glides along on a wide skid pan propelled by a roller drive.

Hardly a mower on the market today preserves yesterday's tradition of letting the grass gather in erratic clumps and drop off in globs at random. While manufacturers deepened the sides of the housing to protect the blade and the user, they shaped it so that a discharge chute on the rotaries sprays the grass to one side. Usually they offer a perforated cap that fits over the chute exit so that the blade chomps up the grass or leaves for a mulch.

The old handles that stuck out like a hitch-hiker's thumb to trip the unwary are on the way out, too. Atlas-Aire has handles that adjust to the height of the user and stand upright for storing, as do Cooper's Aladdin, Eska, Sunbeam and Yuba's Choremaster. Foley's Tartan mowers have handles that fold down for easy storage. Lawn-Boy's mowers have one handle position that permits the machine to be hung with the wheels flush to the wall or you can remove and re-attach the handles easily without tools.

Both tall and short mower operators will appreciate the attention paid to easy adjustment of the mower handle length on '59 models. Atlas-Aire has an adjustment span of five inches. There's both a "hi" and a "lo" side on Lawn-Boy's removable handle. Many others are adjustable too.

Many of the '59 designs put their emphasis on the ease of setting cutting heights. In fact, setting cutting heights without tools became quite a fad this year. You can generally do it with a little hand lever, sometimes foot-operated, or a dial. The cutting heights range from one-half to four inches, depending upon the mower.

Not to mention the increased horse-

power in 1959 mowers would be to overlook one of their primary characteristics. They'll do a better job, generally, because of the more powerful engines in use.

With the '59 mowers, there's hardly any necessity for following up the machine with a lot of hand trimming. By setting the wheels so that the blades project beyond them, these mowers can cut to within ⅜- or ¼-inch of trees or walls and comparatively few must work more than ⅝-inch away. McDonough's Snappin' Turtle even has a special "grass pickup finger" which they maintain picks the last blade of grass off the wall! Cooper's Aladdin brand has a special power edger and trimmer which is 75 per cent self-propelled and can trim within ¼-inch. Use its handle-mounted throw lever and it's changed over into a power-driven edger capable of a cut as deep as four inches and of edging 90 feet per minute at any angle. Jacobsen has a well-constructed edger-trimmer and Reo has a three-wheeled Pivotrim rotary trimmer which mows any contour up close without lifting the front wheel.

If you could see all the 1959 riding mowers lined up before you at one time, you'd find it difficult to believe that they were all designed to do the same basic job. Among them would be self-propelled units, some pulling sulkies, some carrying a saddle. And also among them you'd see miniature farm equipment capable of doing more than a half-dozen chores that once were tough and manual.

Probably the first rider many will choose will be the sulky. These sulkies are hitch-hikers on the self-propelled mowers and the sulky attachment is an optional accessory. Manufacturers offering them include Falls on their 22- and 25-inch Roto Clippers, Goodall with its 32-inch, three-bladed unit and McDonough with its Snappin' Turtle.

The riding mowers proper this year are colorful, finished-looking vehicles and they come with some driving and safety features that do them credit. Many builders are introducing their first riders in '59. Speed, turning radius, width of swath, convenience and accessibility of controls, versatility of conversion for several uses, and comfort for the rider are just some of the things emphasized by these caterers to the elite among lawn tenders.

Let's take a good, close look at one of the riders, one that is typical of the better new ones being shown this year. It is selected at random from among the top ten or so.

Belen's Ridemaster has a 5½-hp Lauson engine with a rewind starter. It cuts a 26-inch swath. Just two of its comfort features are a cushioned seat of airfoam and an inclined footrest. It uses automotive steering, automotive-type tie rods and oscillating front-wheel suspension which makes possible a tight, 39-inch turning radius. The automotive-type differential equalizes torque to both rear wheels and keeps wheels from dragging, even on sharp corners, without tearing the lawn. You can set the speed in any of six forward positions or reverse, without stopping or clutching, and braking is automatic in the neutral position. Its forward speed is up to 4.6 mph.

Cutting height is set by a lever that lifts and locks the blade into position. A blade clutch-control lever at the left of the steering column stops and starts the blade instantly and independently of mower travel.

Thanks to a simple pin-type rear hitch, the Ridemaster can lug all sorts of equipment around the yard, including a utility cart, 24-inch lawn roller, 28-inch seeder-fertilizer, 32-inch lawn sweeper, three-gang reel mower, 30-inch lawn aerator and, to make sure you get year-round use, a 36-gallon angled snow blade which doubles as a grader can be attached to the front. Ridemaster also offers a 12-volt battery electric starter kit and a leaf mulcher.

Now let's look at another category of riding gardening aids, so diverse they're hard to give a group name.

First, there's the riding tractor, kissin' cousin to some of the riding mowers we've already ogled. A good example is Yuba's Choremaster. The engine is mounted over the drive wheels for extra traction and accessibility and to allow a rear exhaust. It has touch-of-the-toe, instant-action brakes and it can pull and remain stable on a 40 per cent grade. The Choremaster has fully pneumatic tires, turns on a tight radius and

can be purchased with a Clinton 4.0- or Lauson 4.5-hp engine, without mowing attachment, for $295.

The 24-inch rotary mowing attachment has a blade that can be locked with a padlock and trims within a half-inch of obstacles. You can get an idea of what the less expensive attachments will cost from the suggested prices of this manufacturer: rotary mower attachment, $29.50; aerator, $42.50; roller, $29.50; seeder-fertilizer, $39.50. The factory quotes no price on a carry-all cart.

Second, is a vest-pocket tractor—anyway it weighs only 100 pounds. This is Lawn-Boy's Loafer. Even though it is powered by only a 2½-hp engine, it can pull half-ton loads, thanks to its 47-to-1 gear ratio. The Loafer is 56 inches long and 22½-inches high and is designed for vertical storage. It's fitted with a rear tractor-type draw bar that will let it pull a single or three-gang 21-inch reel mower, a spreader, aerator, roller, seeder, sweeper, pallet or cart or push a rotary mower or snow blade. The price is $169.95.

Third, there's the type that Toro calls the Power Handle. This is a 3-hp engine and attached handle which carries controls capable of powering eleven different components. The $89.95 device can be used to power products ranging from $209.95 for a powerful 25-inch front reel mower to a $34.95 aerator kit. Among the products are other reels in 20- and 25-inch size, a 22-inch rotary, a 17-inch snow plow that can throw half a ton of snow 15 feet to either side in a minute, a 15-inch tiller, small and large edger-trimmers, a pump, generator and a pump spray kit.

They're rangy, these 1959 power mowers, ranging from below $50 to mink coat prices, and they'll do their traditional job of keeping the lawn trim with greater authority and fewer headaches then in the past—and millions of lawns the country over will bear evidence of the fact this summer. •

A ball of cotton dipped in denatured alcohol will remove mildew from books that have been in storage.

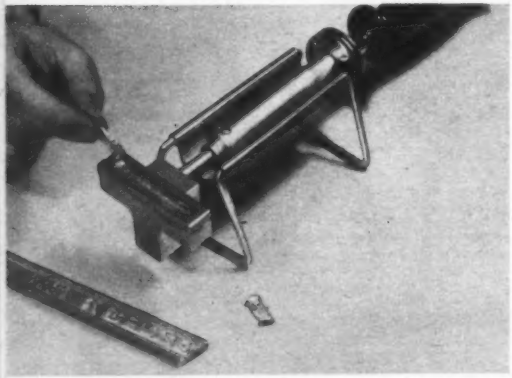
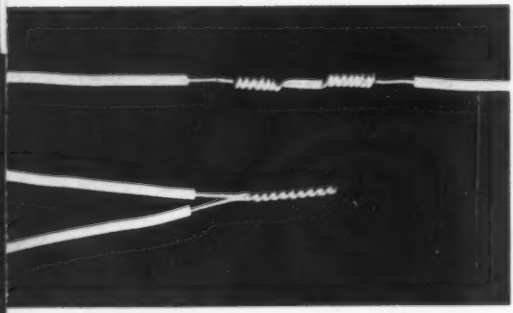
Soldering Pot

[*Continued from page* 125]



FAST-HEATING soldering pot is fed chips of bar solder which melt quickly in trough.



THESE TWO perfect dip-soldered splices could only have been made by using a soldering pot.

8-32 screws and be sure these line up with the holes in the mounting block. Finally, a ⅜x3-inch brass rod is driven into the small block and the unit assembled.

To make a splice, strip the wires and sand or scrape them clean. Then apply a coating of flux to each wire. Twist the wires together with clean pliers. Never touch a cleaned wire with your bare fingers.

To use, plug in the iron and fill the trough with chips of bar solder. Dip the splice into the pot when the solder is molten. Once you've soldered your first splice using this pot you'll wonder how you got along without it before. •

Book Notes

MOTOR SERVICE'S AUTOMOTIVE ENCYCLOPEDIA, Jud Purvis and William K. Toboldt, eds.; pub. by Goodheart-Wilcox, Chicago 5, Ill. 788 pages. Price, $7.

LOOKING for an up-to-the-minute automotive library in one comprehensive volume? Then this is the book for you. The professional mechanic and do-it-yourself car owner will find in this 1958 edition all the information he will need to fix *all* parts of all cars built during the past 25 years—including service specifications for over 100 foreign models. More than 2,800 illustrations and diagrams accompany the clear, non-technical language of the text. By teaching fundamental principles of operation and basic service procedures, this encyclopedia provides the mechanic with the know-how which will enable him to quickly diagnose trouble and make the required repairs on any car, any time. Here is a book that might rightly be called the auto mechanic's bible.

MATHEMATICS FOR THE LAYMAN by T. H. Ward Hill; published by Philosophical Library, New York 16, N. Y. 342 pages; price, $4.75.

MATHEMATICAL TABLES AND FORMULAE by F. J. Camm; published by Philosophical Library, New York 16, N. Y. 144 pages; price, $2.75.

THESE two handbooks from the presses of Philosophical Library will soon be the dog-eared companions of many a hobbyist, craftsman, builder and engineer.

Mathematics For The Layman is a lucid little volume designed to increase your skill with figures. Though not a textbook, it contains enough simple exercises to increase your self-confidence and is exciting enough to convince you that mathematics is a world of tremendous value and endless fascination.

Mathematical Tables And Formulae brings together information that is generally scattered throughout textbooks in the various branches of mathematics. It includes mathematical symbols, interest tables, formulaes in algebra and calculus—and many others. Invaluable as an aid to engineers, science students, etc., as well as a practical home reference.—*D.H.*

there's a

MERCURY OUTBOARD

for you!

Take your pick of Mercury power . . . in twins, fours and sixes from 6 to 70 horsepower! No other outboards built give you such operating ease, such economy, so many features to assure your outboarding pleasure for years to come!

That's because only Mercury has certified 50,000-mile dependability. Incidentally, for those who are interested in speed, the same basic engine holds the official world speed record of 107.9 mph! This is proof that Mercurys have the widest useful operating range and the greatest reserve power above present cruising requirements of any outboards! And Mercury's modern small-bore, short-stroke, in-line engines produce the most horsepower per pound, per cubic inch, per dollar; *and* the most miles per gallon. Make your choice from the "World Record Line" for '59—see your Mercury dealer today for a *free* demonstration ride.

TWINS—6 hp, 10 hp, 15 hp, 22 hp. FOURS—35 hp, 40 hp, 45 hp. SIXES—60 hp, 70 hp. "Full Jeweled"® Power throughout

THE JELLY BEAN

LIFE-SIZE photos of the new Jelly Bean flash bulb and a No. 5 lamp.

By Robert Brightman

AS Alice in Wonderland said, "Things are getting smaller and smaller." Take flash bulbs. The first flash bulb was as big as an orange; then we had a press 40, lemon size; then the No. 5, walnut size; then the M-2 Midget, big as a marble. And now comes the Jelly Bean, a new flash bulb introduced by Sylvania and General Electric which is just about as big as—a jelly bean!

This mite of a bulb is filled with zirconium. It has no base. Instead, to make electrical contact the wire leads from the inside of the flash bulb are drawn through the glass and bent back to make contact with the socket of a reflector soon to be introduced. Because no reflector was available for these bulbs, the improvised set-up shown on the bottom of the next page was used to test the light output of these miniatures.

Three identical shots with three different bulbs were taken of the same part of a living room with a 4x5 Graphic loaded with Royal Pan film. Each exposure was an open-and-shut flash shot with the diaphragm for all pictures set at f-16. Before each photo was taken, the letter corresponding to the letter over the particular flash bulb being used was pinned to the edge of the chair, as shown.

Photographs A and B (the Jelly Bean and the M-2) were about evenly exposed, with the light output slightly in favor of the M-2 lamp. While the card is visible in the photograph at the bottom of the page, the letter C is not because the scene was overexposed in comparison to the first two shots.

The net result, we can safely say, is that the Jelly Bean provides adequate illumination for an interior scene taken with black-and-white film as well as

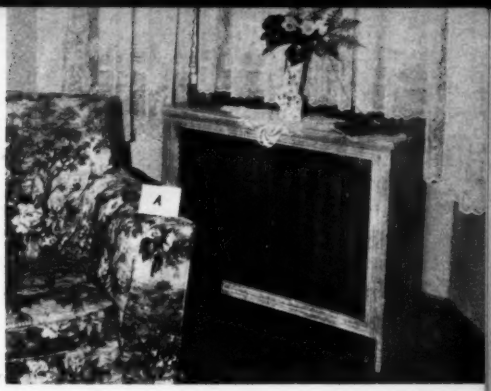
color. Even though no reflector was used except for a white cardboard, a relatively high guide number was obtained. At ten feet, open flash, using stop f-16, the guide number would be 160 with a high-speed film. The recommended guide number for Kodachrome will be 44, for Ektachrome and Kodacolor 55, and for Verichrome 90. All these guide numbers are predicated upon using the flash bulb in a suitably polished reflector (which will be available shortly), with shutter speed at 1/60th of a second.

* * *

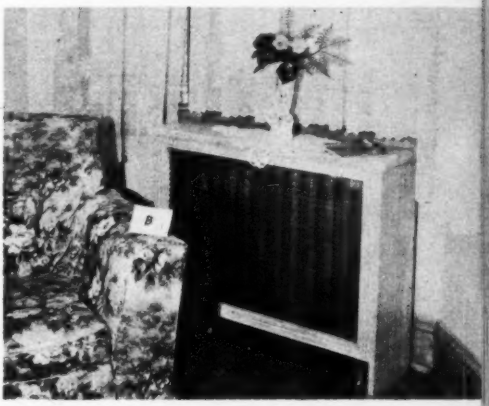
A new daylight loader announced by Ansco, Easy-Loader, is sold complete with enough film to load eight 20-exposure rolls of 35mm Anscochrome for little more than the price of five rolls, $10.75.

An interesting innovation is the packaging of the film. Each 20-exposure length of film is pre-notched at the factory. If you follow the directions for loading you will find that the notched part of the film comes up at the exact point to make a 20-exposure length of film. * * *

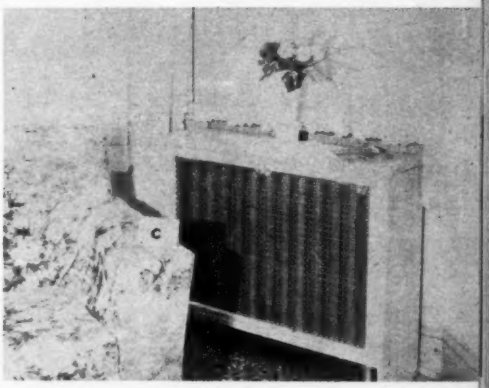
[*Continued on page* 156]



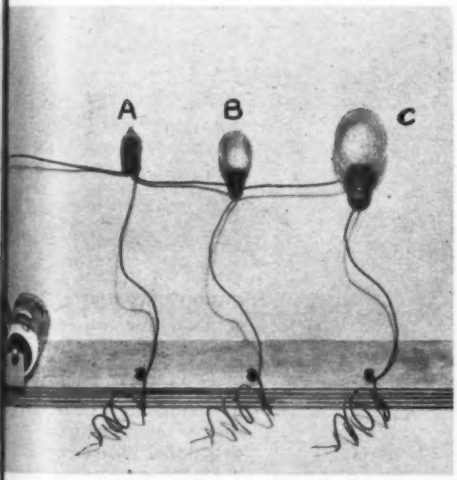
JELLY BEAN was used for lighting this photograph with an open flash set at f-16.



SAME SCENE taken with M-2 midget bulb. Lamp-to-subject distance, ten feet.



OVEREXPOSURE with a No. 5 lamp. All shots were taken with Royal Pan film.



JELLY BEAN (A), Midget (B) and No. 5 lamp (C) are tested against a white background.

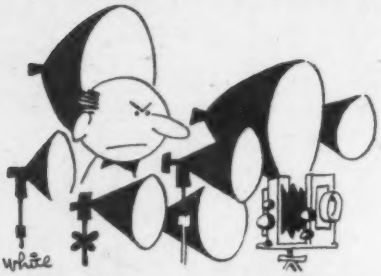


PHOTO TIPS

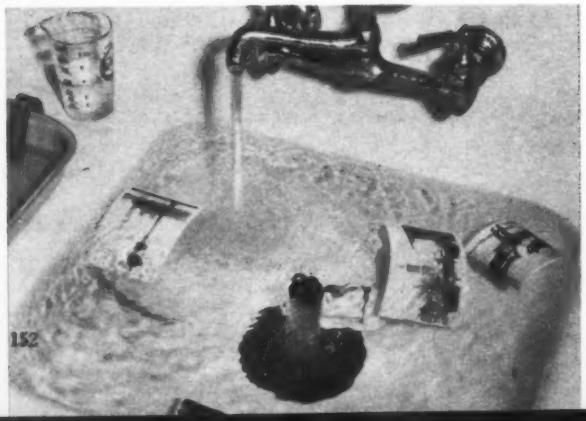
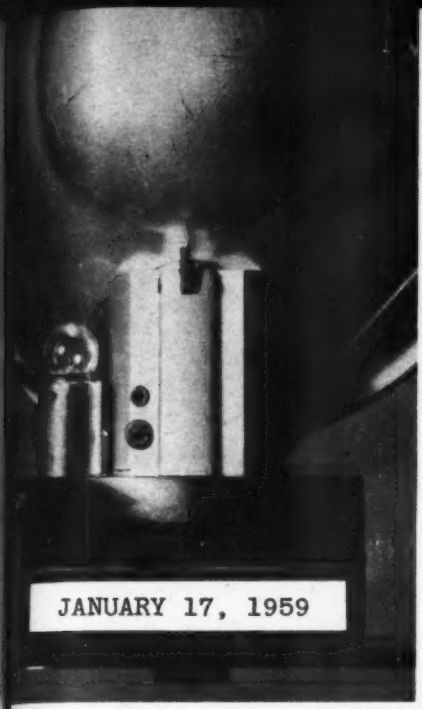
USE A SYNTHETIC SPONGE to prevent water spots on film. Slice a new sponge halfway through, wet to soften, and then squeeze out excess water. Use as shown to swab both sides of the film at once.



OVERFLOW PIPE converts a sink into an efficient print or negative washer. Solder wire guard on top of brass tubing. Then cut a snug-fitting hole in a rubber stopper and slip over tube. Water pressure holds the gadget in place.

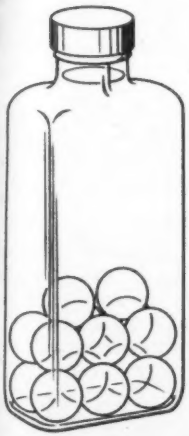


BOTTLE CAPS make practical lens covers. Get a cap that's a near-fit, then line it with felt until it slips snugly over lens.

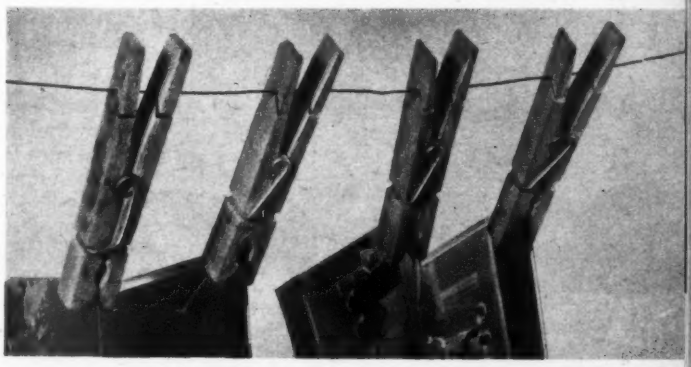
HAVE YOU FORGOTTEN when you bought the batteries for your one or more flash units? Why not tape the purchase date to a prominent spot on each flash attachment?

FITTED WOOD LID over hypo tray halts evaporation of solution; then it need not be repoured into storage bottle after use.

PHOTO CHEMICALS deteriorate faster in partly-filled bottles. Slow this process by using glass marbles to displace volume.



CLOTHESPINS (spring-type) make practical hangers for drying negatives. Notch pins as shown, then suspend them from wire.



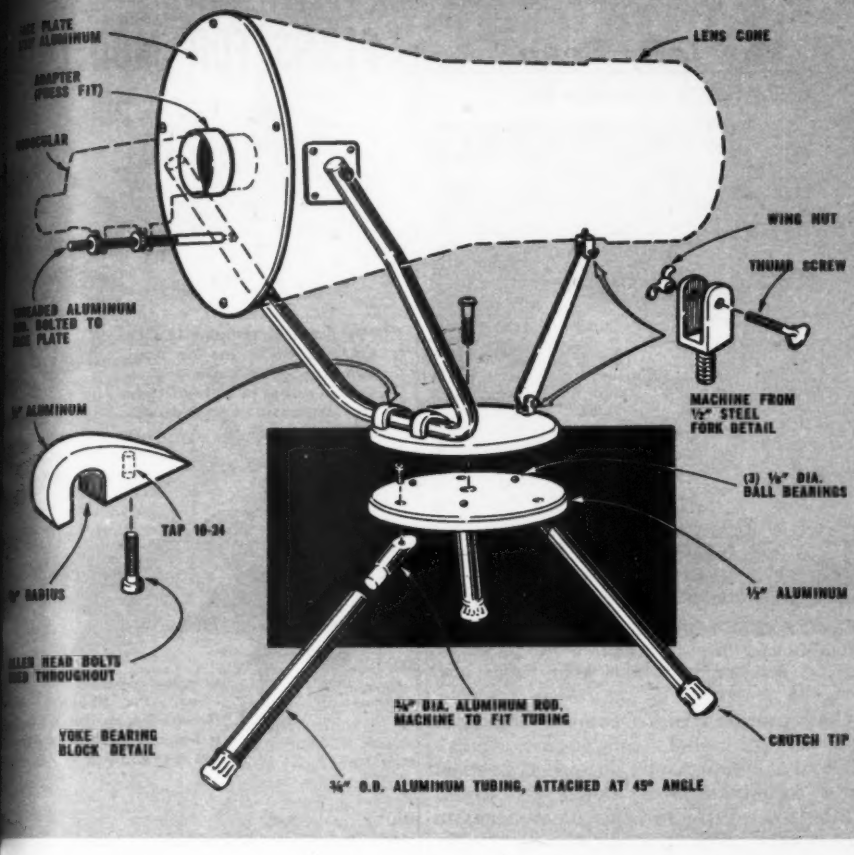
Buy this $1,200 war-surplus lens for $39.50 to build a 48-power tele

Cutting the back plate for the lens cone. This disk holds the monocular assembly.

TABLE-TOP TELESCOPE

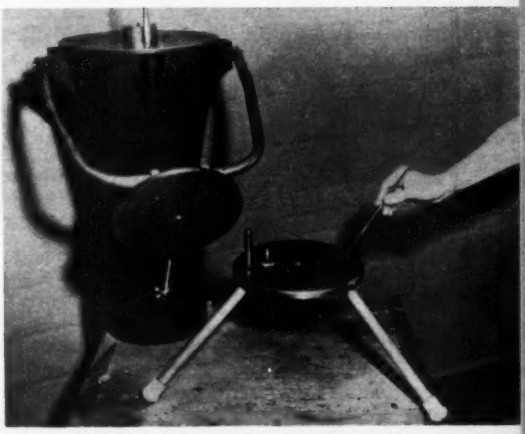
IF you have ever wanted a high-powered telescope with a large objective here is your chance to build one at a cost of less than 25 per cent of a store-bought model.

During World War II the United States Government commissioned Bell & Howell and Eastman Kodak to make aerial lens assemblies for use in air reconnaissance. The completed lens assemblies cost the government about



$1,200. But, due to the constant march of progress you can now buy these lenses at a *real* fraction of their cost. You can get a used f-6, 24-inch focal length lens for $39.50. These mounted lenses, complete with a sturdy carrying case, are available from Edmund Scientific Corporation, Great Barrington, N. J. If you want to put on the dog you can buy a new one from this outfit for $59.50.

These Aero Ektars and Tessars are superbly mounted in cast aluminum lens cones. When coupled to a monocular of eight power you will get a telescope of about 48 power with excellent definition. For the eyepiece and erecting system you can get a low-priced Japanese-made monocular from Edmund or from A. Jaegers, 691 Merrick Road, Lyn- [*Continued on page* 158]



Lower plate holds the three ball bearings in three equidistant hemispherical recesses.

The Jelly Bean

[*Continued from page* 151]

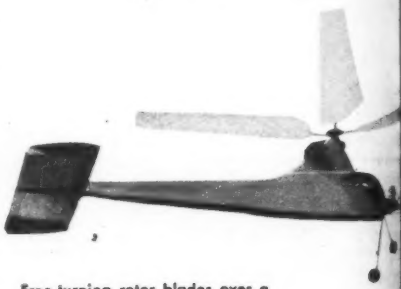
ANSCO'S EASY-LOADER has a light-tight hood which houses the cartridge to be reloaded. Turning the bar pulls film from lower box.

Combination Fixer-Developer. Back in 1899 the dignified and august British Journal of Photography published a report on a combination developer and fixer. While it is a little hard for us moderns to accept this premise, *it is possible* to develop and fix a print or a film in a bath in which the developer *and* fixer have been combined. A great drawback is the fact that the speed of the film is drastically affected. For example, a film with a Weston speed of 200 may drop to a Weston 1 using a combination developer-fixer. However, constant experiments seem to have licked this bugaboo and now the Cormac Chemical Corporation of 80 Fifth Avenue, New York City, announces and has successfully demonstrated a combined processing solution which they call Unibath, which does not affect the film speed. In fact, it seems to increase it! A quart of this working solution (it is diluted 1 to 1) will process ten to 12 rolls of 36-exposure 35mm film. Temperature is not even critical; it can range from 65° to 85° without affecting the density or contrast of the finished print or film. A pint of Unibath, which makes a quart of working solution, costs $2.25. •

PLANS FOR MODEL FA

This detailed, 18-inch STANLEY STEAMER model can be fitted with a working steam engine. Components of its all-brass body are assembled by soldering.

Commonly called the Stinso "Gull," the RELIANT knife through the air like a true bir It has a 31-inch wingspan an can take a .19 to a .49 engine



Free-turning rotor blades over a conventional engine and propeller enable the GYRO SKIPPER to be flown as a free-flight model or to climb in a tight spiral.

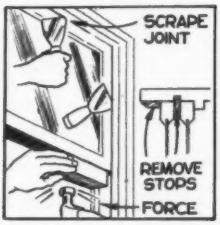
Dried paint has sealed shut the top sashes of my windows. How should I pry them loose in order to ventilate the room? V.M.P.

By running a putty knife around the frame to cut the paint. Doing this, hold a small wood block to the bottom of the sash at each corner; hammer lightly until the sash loosens. Still stuck? Then you'll probably have to remove the inside stops to free the sash.



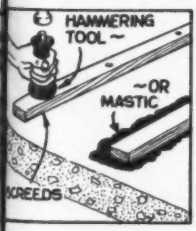
My new bathtub is very slippery. Can it be "etched" somehow and made less slippery? G.D.

Yes, you *can* etch your tub with muriatic acid. But *please*—don't do it! The damage such etching will do to your tub will be permanent. Certain skidproof paints might be applicable in this case. But I suggest you keep using that rubber bath mat.

Paint soon peels and cracks on my wooden gutters. How can I get it to adhere? R.W.M.

Perhaps your wooden gutters have never thoroughly dried out. Apply a coat of rubber-base or asphalt paint to the inside of the gutters to protect them from moisture. When dry, repaint them on the outside.

What is the best way to lay down a wooden floor over an existing concrete floor? G.J.P.



First, coat the concrete floor with a good asphalt dampproofing compound. Then lay down some 2 x 4 screeds on 12-inch centers with Shure-Set fasteners or special mastics made for this purpose and nail flooring to the screeds.

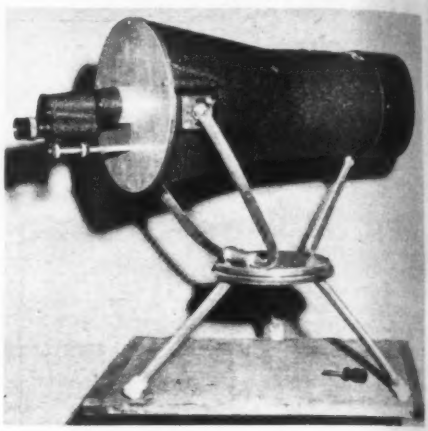
Table-Top Telescope

[*Continued from page* 155]

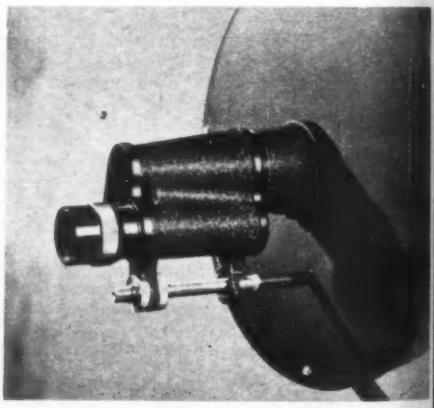


The unique mounting gives the telescope the required elevation plus very good stability.

brook, N. Y., for about $12.00. The technique is to remove the objective of the monocular and merely use the eyepiece and prism assembly as a complete ocular and erecting system.

Since the lens cone is of substantial weight, a somewhat unique mounting technique was designed. The pivot points

[*Continued on page* 172]



The monocular eyepiece erecting system is locked and rough-focused with bolt as shown.

Air Compressor

[*Continued from page* 137]

pressor outlet; to the other end attach a quick-connector unit. A quick connector makes the compressor adaptable to other tools which are so fitted.

The motor on this compressor is one horsepower. Bolt it on the mounting base and connect it to the pressure switch with a three-wire cord using the third (green) wire for the ground.

This baby is economical to use and will give years of service. A new compressor of this type would cost upwards of $350. •

PARTS LIST

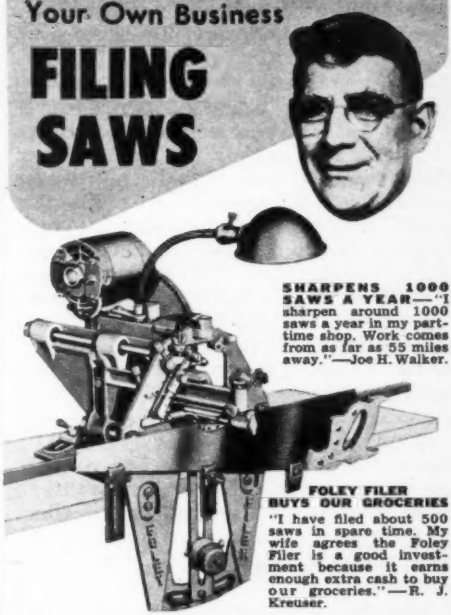
steel rod handle, 3/8"x37"	.50
axle shaft, 3/8"x24 1/2"	.50
1" V pulley, B width, 1" shaft	1.00
37" V belt, B width	3.30
	$101.95

crankcase oil No. 20, 1 qt.
oil can made into air cleaner
tube pipette for pipe joints
hardwood stock, 2 1/8"x2 1/2"x18 1/2"
filter material from automobile air cleaner
4 compressor mount bolts, 5/16"x2"
4 compressor mount spacers, 3/4" high
4 motor mount bolts, 5/16"x2"
4 caster mount bolts, 3/8"x1 1/2"
2 eyebolts, 3/8"x3 1/2"
2 eyebolts, 1/2"x3 1/2"
3 cotter pins
2 axle wheel spacers, 5/8" long
2 bolts for tow bar, 5/16"x1 1/2"
2 bolts, 1/2"x2 1/2"
pipe thread half union, 1/8"
union nut
12' of copper tubing, 3/16" I.D., flare ends (unloader pipe)

FREE PLAN

Tells How To Start Your Own Business

FILING SAWS



SHARPENS 1000 SAWS A YEAR—"I sharpen around 1000 saws a year in my part-time shop. Work comes from as far as 55 miles away."—Joe H. Walker.

FOLEY FILER BUYS OUR GROCERIES

"I have filed about 500 saws in spare time. My wife agrees the Foley Filer is a good investment because it earns enough extra cash to buy our groceries."—R. J. Kreuser.

FOLEY FILED SAWS BRING NEW CUSTOMERS

Here is a steady repeat CASH business that pays from $3 to $6 an hour, and you can start in your own basement or garage in your spare time. Every saw you sharpen with the machine accuracy of the Foley Saw Filer is an ad that brings more customers. J. C. Deibert wrote us: "Since I got my Foley Filer five years ago, I have averaged 4 1/4 saws each day over all this time." Howard Kuhns says: "We operate 2 Foley Filers, and our business averages about 500 saws per month. The count last year was 5,798 saws."

The new model 200 Foley Saw Filer (shown above) is the **first** and **only** machine that automatically sharpens combination (rip and crosscut) circular saws—also all hand saws, band saws and crosscut circular saws. The adjustments are simple—there is no eyestrain—and you can start right away to turn out perfect cutting saws. Exclusive jointing action evens up irregular teeth—old saws cut like new!

"MONEY MAKING FACTS" explains how you can get business from hardware stores, home owners, farmers, carpenters, schools, mills, factories, etc. Just think, with a modest investment, no overhead, no stock of goods to carry, you can start right in on a cash business that will help pay the rent, buy groceries, or a new car. Time Payments available: send coupon today for this practical money making plan. No salesman will call.

Tom Tests Mercury

[*Continued from page 92*]

you choose to run. The only time when discomfort is experienced is when you want to pass with a limited margin of clearance. Then you become aware, like a stood-up bride after an hour or two, that this Mercury wagon is sadly lacking in the pick-up department.

Our test car was equipped with the Merc-O-Matic single-range transmission. For a few bucks more, a dual-range twirler is available but it seems doubtful that this would make much difference at high cruising speeds because the "dual range" merely means that you start one gear lower from a traffic light. It would help the dig-out from a standing start but for fast passing any advantage is doubtful. Actually, neither Lincoln nor Mercury has been as flashy as the competition in their automatic transmission cars since they stopped buying Hydramatics several years ago and went in for knitting their own. To me this seems unfortunate because in all other respects the Mercury is an excellent road car and just about the most comfortable station wagon I've ever driven on a long trip.

The seats are truly lush and there has been no skimping on upholstery. The whittled-down transmission hump adds much to the front-seat comfort. On the passenger side the cowl has been pushed forward and out of the way by what seems to be nearly a foot. This makes things a lot more comfortable for those traveling with you in the front seat. Even six-foot-four McMichael, sitting in the passenger seat, could easily cross his legs—something he hasn't been able to do in any other car since he was nine years old. However, for every action there must be a counteraction, and one of the counteractions turns out to be a glove compartment as inadequate as a 50-cent birdbath in Death Valley. Also, the clock has been moved so far over into right field that the driver almost needs binoculars to read it. The ash tray is hard to reach for the driver. All three are the result of moving the cowl forward, a good thing in itself.

While I'm picking the bones of this Mercury clean, let's get two more baddies out of the way so we can discuss the goodies with a smile—and this Mercury does have plenty of good things to talk about. The shift quadrant of this transmission (and apparently Mercury was the first to introduce and then abandon pushbuttons) is completely hidden when the wheel is turned slightly either to the left or right, as the horn-ring assembly blots it out. If you want to know what gear you're getting into, you'd better have the wheels straight forward. Also, from some angles the windshield distortion was disturbing, especially from the rear seats.

Now for the goodies. As already stated, this is a really luxurious car and even after 12 or more hours at the wheel the seats were still extremely comfortable. The brakes are excellent, better than those on most of its competitors. I brought the car to a complete stop from 100 mph in 387 feet. Top speed is definitely between 110 and 115 mph; I averaged 111.6 mph for ten miles on the Daytona Speedway. Acceleration with this transmission showed 11.9 seconds for 0-60 mph, which is quite amazing after a slow jump of 4.7 for 0-30 mph.

The Mercury handles beautifully through corners. Even while criss-crossing slightly up and down the 31-degree bank at the Daytona track it kept grooving like a golf ball in a mail chute. The bodywork was far better than the competition's in quality of finish and in the little details. For example, even the sun visors are held in place by nicely-designed, spring-loaded clips. The heater-ventilating system is tops, as proved when we ran this particular car through temperatures ranging from freezing to 90°. The foot vents did a better job than those on any car I know of today.

Our test wagon was also equipped with a third seat which was easily folded and shoved under floor level. The spare tire was easy to reach, being mounted inside and in a vertical position at the right rear of the body. A big feature with Mercury this year is the huge windshield wipers which clean the entire width of the windshield from right to left by working together in unison, like a couple of flat-on-their-back Rockettes. The windshield washer was extremely powerful and effec-

tive at speeds up to 80 mph, which is unusual since the jet of water from most washers at speeds above 50 mph either breaks up into blobs that go all over your roof or dissolves into a London fog that hits all the wrong places. Mercury has widened its tread slightly this year for better stability. On a careful check of gas mileage, with a heavily-loaded car and three passengers, we showed 15.8 mpg without making any attempt to conserve fuel.

Personally, I like the body treatment with the simulated wood paneling (made of Fiberglas) which gives this Merc a slight touch of the old station wagon tradition. Many wagons today look more like Pete's Hot Dog Emporium on the run. The hoodline in front of the driver seems lower than on most other cars. In fact, the forward visibility is great and allows you to see those potholes *before* you smash into them.

In summing up, this is a good vehicle with a few faults. Like all Mercury cars, you can tell after a short drive that here is a car that'll stay with you, if you wish, until Ed Sullivan is the oldest guy playing in the Senior Golf Tournament—and that will take a lot longer than some competing networks might like to think. This is a solid automobile. It sops up bumps like a fat girl on a skating rink. The last time we brought you a Mercury test we went into quite a lot of detail about the effort Mercury's made on its sound-deadening program. The division has spent a bargeload of dollars and hundreds of man-hours researching soundproofing material and eliminating squeaks and rattles. A hard 2,000-mile test such as I've just made with this Merc is quick proof that this program has paid off. Station wagons are notoriously noisy but this rig over the road was as silent as a bishop's stare. Wrapping it up, the '59 Mercury is a really good automobile, loaded with top value features. It has its faults—but then, what hasn't? •

BUILD YOUR OWN TELESCOPE

If you can repair a leaking faucet, you can make a reflecting telescope. For a complete set of plans, photographs, and instructions that will show you how to construct MI's portable six-inch telescope, send $2.00 to MI Plan Service, Fawcett Place, Greenwich, Conn.

Tests Facel-Vega

[*Continued from page* 88]

on a 104-in. wheelbase, and with welded tubular frames in the best and most expensive sports car tradition, it stands 53 in. high. The skin is aluminum and the wheels are wire. It's a thrill just to sit in this bucket. Naturally, the upholstery is all beautiful leather and the instrument panel resembles a condensed version of UNIVAC. The power plant is Chrysler but the exhaust system is pure sex. The moment the engine is started you get a deep *Voom! Voom!* similar to blasting echoes from an underground mine. The transmission is pushbutton Torque-Flite.

After one or two starts it becomes apparent that this is the original easy-does-it kid. At the slightest toe pressure you leave the mark like an arrow suddenly released from a 100-pound bow. On high-speed, deserted highways this snarler will get you from Point A to Point B quicker than you can say it. Through bends and around the hardest turns it grooves like a Gold Cup boat through a Tunnel of Love. There are two back seats in this rig that are adequate for midgets and just right for people you don't like. This is a sportsman's cruiser for making a fast dash to a coupon-clipping jamboree or hustling your secretary down to see her ailing grandmother at Acapulco. In many ways this car reminds me of a big, glandular Aston-Martin and the design is definitely from the same school of thought, if not the same drawing board.

There have been a number of these connoisseur chariots built over the years for the delectation of the man who has everything but trouble—from Briggs Cunningham's aforementioned Vignale coupe to some of the Allards and the Dual-Ghia which has proved popular with the laughingly referred-to "Hollywood Watering Set." These are all cars calculated to catch the eye of the man (or woman) who wants a prestige item that will make him stand out in a crowd like Burl Ives in a bikini. Unlike some other luxury imports, if you should swallow a valve or striptease a button on the Vega's transmission, you just call your Chrysler dealer and get the answer to your service problem.

By no stretch of the imagination does this car have the ballroom interior space of some of our better-known domestic balloons—but then there are a lot of guys in this world who think P.T.A. stands for "Please Take It Away" and who'd be happy with a car that had even less cargo room than the Vega. But it has other properties that departed from most American products with Harry Truman's White House piano recitals. Take our cover girl, Vikki Taylor. I can't help wondering if she'd look quite as happy standing alongside one of those Detroit mammoths that boasts enough carrying space to tote two mothers-in-law plus all the dining room furniture. A gorgeous gal goes with a gorgeous car. Or, as Paul Whiteman often says, "The better the cast, the better the theater has to be."

The Facel-Vega has a lot of little niceties rarely found in cars as sporty as this one: power disc brakes, power windows, an excellent radio and a real heater. Even air conditioning is available, although our test car didn't have it. The suspension is coil spring with wishbones up front and leaf springing in the rear, plus excellent shocks that cushion any hard bend or curve going. To make this car plow you'd have to remove one of the front wheels. Still, the ride isn't harsh, just quick. In normal tune this job can top 130 mph. With a Smokey Yunick full set-up (meaning a teardown, careful reassembly and tuning), if you can't get 150 mph out of this vehicle it's because you're chicken.

In summing up, the Vega is not a car that's going to sweep the family market like wildfire. It is a car that will appeal more to the sophisticated connoisseur than to the man who'd be afraid to show it to his boss, knowing the auditors would be rushed into the plant within the hour. This is a sporting piece of equipment that looks like money, which is exactly what it costs. You're not apt to see one racing at Bridgehampton or Sebring but guys who drive race cars at those places quite often arrive in Facel-Vegas. It is the perfect sportsman's car, with plenty of room for normal everyday gear, for the guy who still gets a kick out of driving a real automobile.

The kicks in driving, as most of us know only too well, have just about been eliminated from many of our domestic products.

In this day when sales pitches are directed at fuel economy, kiddies, bicycles, boat- and picnic-basket room, plus marshmallow softness in the ride, there is very little left for the guy who just likes to go out and take himself a drive. A great car is one that makes you want to get up at daylight and hit the highway. The Facel-Vega is not for Joe Everybody—it is a car to be appreciated as a remarkable and wonderfully satisfying road companion. •

Mind-Reading End Wars

[*Continued from page* 61]

ESP *does* work. But so far the power cannot be controlled. On some days ESP-gifted people exhibit remarkable abilities in experiments; on other days they fail dismally. If a way can be found to tame this force and put it to work, Dr. Rhine told MI, the benefits for the human race can scarcely be imagined.

[Editor's Note: Typical ESP experiments are done with a special deck of 25 cards—five bearing stars, five circles, five crosses, five squares and five wavy lines. The cards are shuffled carefully and the subjects try to guess their sequence as they are turned over. By pure guesswork, mathematicians say that an average subject would get five right out of the 25. (Make yourself an ESP deck and try.) But ESP-gifted persons get consistently higher scores.]

Many leading scientists agree with Dr. Rhine that ESP's existence is no longer in doubt. The unique force has many famed adherents, including Dr. Gardner Murphy, research director of the Menninger Foundation and former president of the American Psychological Association; Dr. Robert Thouless, former president of the British Psychological Society; and Dr. S. G. Soal, London mathematician now internationally known for his own ESP tests. America's greatest psychologist, William James, was convinced, as is also the world's greatest living psychiatrist, Dr. C. G. Jung of Switzerland.

There are many fantastic cases of ESP

in the records, which preceded and stimulated recent, more rigorously controlled experimental research.

For example, there is the authenticated story of young Laura Edmonds, pretty daughter of a prominent New York City judge, who was reading quietly one Sunday afternoon when a stranger dropped in to see her father. Laura had gone to a finishing school, where she had studied a little French. Besides English, this was the only language she knew. And she had never seen the caller in her life.

The visitor was a Greek. He was chatting with a group of other people in the judge's living room when Laura suddenly walked over and began talking to him—*in his native tongue!* She spoke excitedly and within a few moments, the newcomer was in tears. Laura had told him that his son had just died in Greece, 4,000 miles away.

Incredible fact No. 1—the young girl spoke fluently in a language she had never learned. Incredible fact No. 2—she knew about the death of the man's son, which was later confirmed. Said the judge following the amazing episode: "To deny the fact is impossible—I could as well deny the light of the sun. It took place before eight or ten educated and intelligent people."

How could Laura have performed the feat unless we accept the fact that some persons are gifted in an unexplained way to pierce the veil of the unknown?

In a more practical vein was the series of experiments performed by Mrs. Upton Sinclair, wife of the novelist, and a young American business man named Robert L. Irwin. Irwin sat in his Long Beach, Calif., home—Mrs. Sinclair, at the same time, was at her home in Pasadena, 30 miles away.

Seven separate times, Irwin made a drawing on a sheet of paper. Seven times, Mrs. Sinclair lay on a couch and concentrated—then got up and made drawings corresponding to mental impressions she received.

The first time, Irwin drew a chair with horizontal lines at the back. Mrs. Sinclair first drew a chair with horizontal bars, then another chair with a set of vertical lines. She also said Irwin's drawing was on green paper and it was!

Irwin drew a watch. Mrs. Sinclair drew a round flower, saying: "The petals are not petals but wire and should be uniform . . . I see it shining as if it is metal."

The amazing finale: Irwin drew a circle with a compass and Mrs. Sinclair drew a series of concentric circles, with a spreading stain of blood, writing: "All this dark, like a stain—feel it is blood, that Bob is ill." At exactly that time, he was having a hemorrhage!

These are but two of the reported cases in which a human ability beyond the senses has apparently played a part and which led up to the controlled laboratory experiments reported in the Journal of Parapsychology (now in its 23rd year). But how could such an ability be harnessed to the needs of national defense and what would such a program cost?

An ESP-For-Defense research program wouldn't cast nearly as much as creation of the first atomic bomb, which involved a total expenditure of $2,233,000,000. Dr. Rhine estimates that the cost of just one experimental bombing plane could finance a sound research project aimed at discovering the knowledge needed for the practical use of ESP.

Dr. Rhine checks off these plus factors which the research scientists will have to start with:

ESP is an actual human ability, proved many times over.

ESP can operate regardless of any type of physical barrier yet tested. Experiments have shown that individuals can be aware of things in the next room, next block or across the world. They can "see" through walls, curtains and beyond oceans.

ESP can sometimes work upon demand! Many times persons gifted with ESP, when told to read the order of 25 concealed cards, have demonstrated they could do so in an unbroken series of successes. These basic facts may be found in Parapsychology by Rhine and Pratt (C. C. Thomas, Springfield, Ill.).

But there is one major minus element—science must be able to control ESP and *know beyond any doubt that the information received through its powers is absolutely right.* Dr. Rhine reasons that the missing links ought to be discoverable, as all knowledge should be, "if the proper effort were put into getting it."

The actual operation of ESP as a weapon to defend America, once it was perfected,

would be unique in the history of wars and national preparedness. Dr. Rhine prefers not to speculate on its practical applications but MI spoke to a number of other experts in the field and the following fascinating picture emerged. They emphasized that while this must be considered in the realm of speculation, it is no more incredible than any educated guessing in the scientific world today.

To begin with, there would be no need to plant spies inside enemy or hostile nations because, as mentioned above, ESP vaults space barriers with ease.

Once ESP can be controlled, a training program could be set up, drilling specially gifted individuals. They would learn not only how to utilize their powers but all about military matters as well. Then trained personnel could be attached to the counter-intelligence units of the Army, Navy and Air Force.

These services would maintain some ESP men at headquarters and disperse others among the various commands. For example, ESP officers could be attached to a divisional headquarters in the field, just as a G2, or Intelligence, man is today. ESP officers could be stationed on each warship and at each air base.

In addition, an especially trained unit of the country's finest ESP personnel would be attached to the Central Intelligence Agency, reporting directly to the agency's chief.

These men, wherever they are stationed, would function as the eyes and ears of the nation, picking up any vital information which could be of value in maintaining the peace or winning a war, should one come.

In the field, ESP men might be assigned to ferret out secret enemy troop movements or the timing of attacks by "reading" enemy battle plans or actually "hearing" the decisions made at enemy staff conferences. Aboard a battleship, ESP men could be ordered to discover the

location of enemy submarines. At an air base, instructions would go out for ESP to spot secret missile launching centers.

A man gifted with this super-intelligence could go about his task in a number of ways. Here are some possibilities offered by ESP experts, based on progress which has already been made along these lines:

Hypnosis could be utilized because tests have proven that ESP powers are intensified while the subject is in the trance state. Under a hypnotic spell, for example, an ESP man could be told: "Go to the enemy's headquarters. What do you see there? Is there a map on the wall, are there battle plans any place? Do you see anything that would help us?" Once the force has been perfected and controlled, the subject will "go" as directed and tell what he sees. And since he will also be trained in military tactics, nothing of importance will escape his scrutiny.

Another method could involve the use of drugs which sharpen perception and permit the imagination to roam unfettered. Dr. Osis of the Parapsychology Foundation reports new experiments with a drug called Mescaline about which Aldous Huxley wrote so glowingly in a book some years ago. Huxley said the drug created remarkable sensations. Subjects tested with it only this past winter reported seeing bright, beautiful images in glorious colors and felt their imaginations soaring. "In such a state," Dr. Osis points out, "ESP may be able to ride in on the images if we are dealing with an ESP-gifted subject."

But the practical applications of ESP, however fascinating it may be to conjecture upon them, must wait until the research scientists can come to real grips with this unknown force, refine it, subdue it and make it work for peace and for the benefit of all mankind.

Would our leaders welcome the development of ESP as a weapon in the fight for a durable peace? Perhaps the best answer to that is a direct quote from Secretary of State Christian A. Herter. On his return from a Big Four parley in Paris, Herter was asked what he thought of the chances of accord with Russia on the Berlin question. "If I knew what frame of mind the other fellow was in, I could answer that better," he said. ESP would be the best way to know the other fellow's frame of mind. It is a military-political tool we ignore only at our peril. •

The Small Car Story

[*Continued from page* 73]

ried in the smoothest mounting ever devised for a two-cylinder motor. The rugged 29-cu. in. mill develops 16 hp, gets about 50 mpg and unwinds at 60 mph. The little two-door rig totes four people and has a wheelbase of 72 in.

The same mechanical parts are also used on the Bianchina, a little two-seat coupe with custom finish produced by Bianchi.

Citroen, in France, is still unable to meet all demands for their ugly but rugged 2CV which has been hailed as the most original design since the Model T Ford. All-independent suspension, inter-connected between front and rear, gives smooth riding on roads or across country such as few cars of any size can equal. The OHV, flat-twin, 25-cu. in. engine driving the front wheels is throttled down to 12 hp to guarantee long-life at top 55-mph speed. This French beetle has a 94-in. wheelbase, weighs 1,125 lbs. and can carry four comfortably on its seats made with rubber bands on a tubular frame. It gets about 65 mpg.

Renault 4CV is the squat and reliable little sister of the more glamorous Dauphine. It has a 45-cu. in. water-cooled rear engine that develops 28 hp and pushes it along at up to 70 mph. Gas consumption ranges above 40 mpg and the 1,150-lb. French import handles well on the road.

Frisky is a British car that has recently reached our shores. It comes in both coupe and convertible which retail at about $1,395. A sport version is called the Sprint. The coupe rides on a 60-in. wheelbase. The two-door, two-passenger car has a 19-cu. in. engine, grinds out 16 hp and travels 60 miles on a gallon. Top speed is 51 mph. The car weighs only 756 lbs.

The compact car makers are also considering the economy sports enthusiasts. The Austin-Healey Sprite with a 57-cu. in., in-line-four-cylinder, OHV water-cooled mill boasts 42 hp. The two-passenger sports car can hit 84 mph and will get up to 40 mpg. It has an 80 in. wheelbase, is 142 in. long and weighs 1,314 lbs.

Berkeley, another British sportster, is unique with its unit body-chassis in resin-bonded fiber glass reinforced by light alloy. A 30-cu. in., three-cylinder, two-stroke engine mounted transversely drives the front wheels. It rolls on a 70-in. wheelbase, puts out 30 hp and gets up to 60 mpg. Top speed is a shade over 80 mph for this 800-pounder.

DAF is Holland's entry into the small, small car market. It is not yet being brought into the U.S. but is slated to be delivered in August. It is the smallest car built with automatic transmission. The engine is a horizontally-opposed twin-cylinder, four-stroke, OHV job that is air-cooled. The 36-cu. in. mill develops 22 hp, delivers 40 mpg and travels at a top speed of 56 mph. Wheelbase is 81 in., length 142 in. It will be priced under $1,500 when it is imported.

Vespa 400 is another tiny car scheduled for U.S. consumption sometime this year. The French car is very close to the Fiat in size, shape, performance and accommodation. It will probably sell for under $1,100 when it arrives.

The well-known Messerschmitt with tandem seats under a plastic dome is no longer being brought into the U.S. but plans are afoot to bring the single-cylinder, two-stroke engine midget back to America in the near future.

Zundapp Janus may also be brought to the U.S. again. The unique Janus has two back-to-back seats and doors at each end. The one-cylinder, two-stroke engine shares the space under the seats with the spare wheel and fuel tank. It is surprisingly lively despite its tiny 15-cu. in. engine. The rear seats on this one lift out to reveal a big cargo space or all seats can be folded to form a camp bed.

The egg-shaped Nobel 200 (see page 80) is a two-door British buggy which may also soon be imported to the U.S. Powered by a 12-cu. in. Sachs single-cylinder, two-stroke engine that is air-cooled, this little car develops ten hp and will run 80 to 90 miles on a gallon of gas. The 126-in. bug has a wheelbase of 81 in. and room in the back seat for the kids.

The New York POE price will be about $1,100 when it is sold here. A kit for do-it-yourself fans is also planned. The kit

would allow you to buy the car for only $895 and put it together yourself in 90 to 100 hours.

Competition is going to be tough, for the small, small cars have to compete against each other and with second-hand models of larger cars. But you'll probably be seeing a lot more of them. They are, like their successful bigger brothers, here to stay. •

Money-In-A-Minute

[*Continued from page* 67]

school, graduations, etc. All are good bets.

As far as the camera on the job goes, look for situations in which a picture can lead to some simplification, time-saving or increase in accuracy. What record-keeping procedures could be eliminated with photographs? What protection can a firm gain by having photos? For example, some companies take minute-photos of merchandise packed in trucks and railroad cars to prove that it was properly loaded in case there should be any damage claims later on.

Check also to see where photos may help with sales. A number of auto dealers take snaps of interested prospects standing in front of cars and mail the photos to them when they leave the showrooms. A boat dealer in the East takes photos of prospects at the tillers of sailboats he hopes to sell them. Techniques such as these often clinch on-the-fence sales.

When it comes to selling pictures, don't forget to dress them up. Inexpensive photo mounts with corner-holding tabs can be bought in any photo supply house. A slick three-fold mount can be ordered from the camera maker. Another sales gimmick is the special postcard mount. With these all you have to do is peel off a protective film and press the print in place. The other side is already set up for address, stamp and message. Use of these cards is suggested at beaches and other vacation spots where customers may want to mail photos.

Your prices for the photos you take should include film, mounts, flash bulbs and any extras, such as transportation. Add an allowance for spoiled pictures and then top it off with your profit margin. The selling price of your pictures may run around 75 cents, or less if you are sure of volume sales. It could also go up to $1.50. Don't ever undercharge. It's difficult to increase your customer's price if you originally pegged it too low.

Today's Polaroid Land Cameras—there are five models—range in price from about $73 for the model 80A to $169 for the deluxe model 110A. All models have multi-speed shutters and all are internally synchronized for flash. The three most expensive models have coupled rangefinders—a feature that is virtually a necessity if you want to use the camera for making money.

Print size runs from 2¾x3½ in. in the low-priced 80-A to 3¼x4¼ in the others. Several types of eight-exposure roll films are available with prices from $1.64 to better than $2.29. There's also a projection type film for making slides which sells for $3.49.

There is also a battery-condenser type flash gun which sells for about $16 complete with a special bounce-flash bracket. Specially designed exposure meters are available at $14.50 and $16.95, as is a print copier which fits all models and lists for $29.95.

A recent addition to the Polaroid Land Camera line makes one-minute photography possible with the popular 4x5 press type Speed Graphic. This is a special holder designed to fit the Graphic which can be loaded with a new and improved photo-in-a-minute film. These holders retail for $49.95; the film costs $6.22 per box of 12 or $7.31 per box for a special, professional-type film.

That's the story on how to earn extra cash with the 60-second camera. How much you can make is up to you. Who knows? You may become the first picture-in-a-minute millionaire! •

Fun Of Houseboating

[*Continued from page* 57]

Houseboat owners in a warm climate can enjoy living aboard all year. In many parts of the north, however, ice, storms and rough water make year-round living impractical. The boat should be taken out of the water where lakes and rivers freeze. In any event it's a good idea to remove the houseboat from the water once a year to repaint the hull.

Houseboat living costs are small when compared with a full-size house. If you

don't own any waterfront property you can tie up to a commercial dock at about $1 per foot per month. Electricity, fuel for warmth, water heating and cooking are far from exorbitant and make the day-to-day expenses of houseboat living one of its most attractive features.

Houseboats are at their best on inland waters. They are *not* designed for off-shore cruising. No one knows how many houseboats are now in use but some of the largest concentrations of houseboating families are found in the South and Midsouth where big man-made lakes provide excellent boating waters. There are thousands of recently converted houseboating families on the rivers of the Mississippi Valley. The story is similar in the East.

If you own a houseboat you can change your homesite at will. You can, as some people do, keep it moored through the rough months, go north with the coming of spring and adapt your life to a floating home. You can also use your boat for weekend parties and, like some city dwellers, stay tied up to the dock.

One of the recent developments in the houseboat picture is the establishment of houseboat rentals. Dock operators purchase a few houseboats and rent them out by the day or week to fishermen or vacationing families. Properly operated, the plan offers a profit to the owner and a chance for the potential buyer to try houseboat living before investing in one. The best way to locate houseboat rentals is through the manufacturers. Rates vary from $100 to $250 a week for family size boats.

Some manufacturers are now offering houseboat kits so the buyer can, by doing part of the building himself, get a family houseboat at a lower price. One of the larger houseboat builders now offers steel hulls for either a 24 or 32-ft. boat in addition to his regular models.

Houseboat manufacturers now offer a

variety of boats to suit any family's requirements. They foresee a bright future for these craft which specialize in comfort afloat. Relaxed houseboating families, leisurely piloting their flat-bottomed boats over lakes and streams, will agree wholeheartedly. •

Hot Weather Fishing

[*Continued from page* 82]

that exceptionally high or low barometer readings make the swim bladders of fish contract or expand causing physical discomfort. Then the fish might not feel any more like eating than you might if you suffered a severe headache. But I don't believe moderate changes in air pressure make much difference.

Take the midsummer shower that raises brooks and rivers. Surely the barometer is below normal during such storms. But what better time is there for catching bass and trout than when the waters are on the rise? And where's the wind? Usually from the east or northeast. This knocks the daylights out of another sacred cow—the idea that fish won't bite on an east or a north wind. I've caught boatloads of trout, land-locked salmon, bass and walleyes in these winds.

Rain in midsummer does two things that interest fish very much. It cools the water and it washes food into lakes, rivers and streams. Sometimes the biggest old brown trout in a river will run up swollen feeder streams to gorge themselves on worms, insects, drowned mice and birds and all sorts of other exciting tidbits. Smallmouth bass come out of hiding in rivers to forage close to the banks for food. In lakes, trout, salmon and bass are apt to feed close to the surface along the shores. But where are most of the anglers then? Inside sitting around the fire keeping warm and dry, and probably cussing the weather. Where are the ten per cent who catch 90 per cent of the fish? Out fishing their heads off and having the times of their lives, thankful for the rain. They are dressed in the best rain gear they can buy because they believe it is as much a part of their fishing equipment as rods and reels.

Suppose it doesn't rain? Then depend upon a stream thermometer to tell you when to fish. Trout and walleyes bite best

n water temperatures between 60° and 9° F, smallmouth bass between 60° and 5°, largemouth between 65° and 80°, ickerel between 60° and 75°, northern ike between 60° and 78°.

During the heat of day, fish lie deep in les. Fish the deep holes if you must h during daylight hours. Find them ually near drop-offs from cliffs, weed ds, sand and gravel bar and rocky reefs. art fishing at about 15 feet, then fish e feet deeper every few minutes till you d your customers.

In fishing streams and rivers during ylight hours in midsummer, work the ep holes, stretches that lie in deep shade, e pockets of long riffles and rapids where e oxygen content of the water is higher.

If you want to hit the jackpot on your hing vacation this summer, fish when e water temperature is right, even if this e midnight as it surely will be in many rts of the country. In northern and rthwestern mountain country, waters ol rapidly as the sun goes down. I have hed Adirondack rivers all day without rise of a trout over eight inches in midmmer. Then suddenly, at about 10 p.m., ve seen 12- to 20-inch trout begin to feed ll up and down the river.

Practically the same thing has hapned to me on bass and walleye rivers d lakes all over the country. Feeding riods usually last from one to two or ore hours, then shut off abruptly as the ater chills below the optimum for trout eding. When this happens, anglers going ut at dawn will find poor fishing because e waters will be too cool. The next feedg period will be along about eight or just bout breakfast time. And this'll be a ighty short period.

During very hot spells, when the heat ntinues long into the night, dawn or even t before dawn becomes the feeding me. During unusually cool periods, hich sometimes come along in the north ven in August, the fishing may shift to idday or even afternoon. During averge midsummer weather, bass activity ually begins around 10 p.m.

Wherever you go this season, be sure check the game laws before you leave me. A few states consider night fishing crime. Better vacation somewhere else r the best summer fishing. •

Table-Top Telescope

[*Continued from page* 158]

(there are four) take the geometric sha of a trapezoid. This arrangement results i a rigid yet quickly adjustable mounti The completed 'scope has a quick set- and break-down. A single bolt conne the mounting to the tripod, removing th wing nut collapses the mounting.

The business end of the instrume mounts the monocular less its objectiv There are two focusing adjustments, one course is the eyepiece of the monocula The other, a coarser adjustment for rou focusing, is part of the monocular moun ing.

The drawings and accompanying phot will give you a good picture of how the in strument is built and put together. Th very first thing upon receiving the cone to remove and strip the unit of all needle extras, both on and inside the cone. Re moval of this paraphernalia will also lesse its weight. Also, remove the diaphrag from the lens assembly. With all th done, you will have a 24-inch focal lengt lens with four inches of clear apertur mounted in a metal cone.

Start construction with the tripod. Th removable legs are ten inches long an are made from ¾-inch diameter aluminu tubing. Rubber crutch tips cushion th legs. Lay out the two disks on half-inc aluminum stock. Drill a half-inch pivo hole in the center of each plate. Drill an tap the holes in both places as indicated i the drawings.

The tripod leg retainers are made fro ¾-inch diameter aluminum. Drill and ta 10x24 holes, as shown. The tubular leg should be a slip fit into the complete adapters. Bolt these units to the tripod dis with three 10x24, half-inch Allen-hea bolts.

The yoke bearing blocks are cut fro half-inch aluminum. The tube for the yok can be easily bent by filling it with fi sand and adding water to pack the sa tightly. Plug the ends with corks and pro ceed to bend. When bending is completed sluice out the sand with running water.

The two small front forks are machine from mild steel. Mount one on the len cone and the other on the turntable. Be tween these two, mount the front le

ich is cut from quarter-inch aluminum ck. Wing bolts and wing nuts secure se hinge points.

Next, mount the quarter-inch bolt sup- rt rod for the monocular. This arrange- nt allows you to position the eyepiece embly in order to "bracket" the point of us. Three steel ball bearings between disks steady the 'scope and make for y easy rotation.

To complete the telescope, paint all parts ull black, first masking all hinge points. final assembly all moving parts should given a dab of heavy motor oil. The ope, using any monocular with a half- h focal length eyepiece, puts this instru- nt in the 45 to 50 power class, an excel- t instrument for viewing the moon.

—*Paul J. Palenek*

Portaboat

[*Continued from page* 114]

ebolts which fit into the oarlocks should slipped on before this is done. The eye- lts, of course, are not welded to the pipe it would be difficult to slip them into e oarlocks. However, their travel should limited by spots welded on the pipe so t the side motion of the boat on the me will be limited to a fraction of an h. A coupling on the front pipe makes possible to use standard right-hand reads when tightening up all connec- ns. All the joints can be welded when e wheels are level and parallel with the t in a trailing position.

For trailing behind a car, a large eye- lt is installed at the bow of the boat d a snap hook, welded to an eyebolt, is talled on the bumper of the car. When se are coupled, and a safety chain is lled, you're ready to go. Remember, wever, that your Portaboat is designed haul a light boat, not cargo—and stick to od roads. When you get to the water, u can unhook from the car and wheel ur boat right in. Then you can detach e Portaboat and leave it behind or even it up and bring it along on short runs. •

Are you a guy who didn't MARRY THE BOSS'S DAUGHTER?

They tell us it's a good way to get ahead. The tough part is . . . there aren't enough bosses' daughters to go around. But there's another way to call your shots.

How? Look at the want ads! Business and industry are crying for men with special training. 60,000 Engineers—Industrial Supervisors, Communications and Traffic Specialists are urgently needed. Demand has never been greater—or salaries higher—for trained people.

With the right kind of training you can step into one of these jobs — write your own ticket. Without it you must compete with a few million other guys who are in the same boat. And, if times get tough, it's not going to be a good boat to be in.

So act now! Choose the education for men who want to get ahead fast. Pick your future from success-proven I.C.S. courses. Whichever field you choose it will be *right* because all I.C.S. courses are developed by business and industry leaders who know what *you* need to know to go places.

You get *personalized* guidance. Earn as you learn. Study in your spare time — at your own pace. And when you get the coveted I.C.S. diploma, it's the frosting on the cake. Chances are by that time you've already been snapped up for a bigger job with a bigger price tag.

Don't wait another day! Choose your course and send for the free career booklets offered below.

For Real Job Security—Get an I. C. S. Diploma!

MEMBER AUDIT BUREAU OF CIRCULATIONS

Satisfied with my PRESENT PAYCHECK?

NOT ME!!

TODAY, you are probably earning enough to get by—enough to provide your family with life's necessities, and perhaps you are depositing a few extra dollars in the bank.

BUT are you content with just earning a living wage? Do you say "Someday I'll really get a break and go right on to the top." THAT'S WISHFUL THINKING!

You know that the "breaks" go to the man or woman who is *prepared* to take advantage of them—to the person who can fill the better job and who is worth more money. He makes the "breaks" instead of waiting for them.

DO YOU QUESTION YOUR OWN ABILITY?

There is a field of business which has never been overcrowded—it's the ACCOUNTING FIELD. And the demand for skilled accountants—men and women who really know their business—is increasing. State and Federal legislation requires much more efficient accounting from business. Corporations are in constant need of expert counsel in matters relating to Auditing, Cost Accounting, Business Law, and Federal Income Tax. Men who prove their qualifications in this important branch of business are promoted to responsible executive positions—given an opportunity to earn real salaries. The range is $5,000 to $10,000 a year—even to higher income figures.

WHY BE SATISFIED WITH YOUR PRESENT JOB?

Why accept mediocre pay when right in your own home you can acquire the necessary training to advance rapidly in the profitable, growing field of Accounting.

Under the LaSalle Problem Method you can acquire a thorough knowledge of Accounting, master its fundamental principles, become expert in the practical application of those principles—without losing an hour from work or a dollar of pay.

Your training will be under the supervision of organization and management specialists, Attorneys and Certified Public Accountants. Preliminary knowledge of bookkeeping is not necessary. We train you from the ground up—Basic Accounting right on up through the Certified Public Accountant training.

SO RIGHT NOW—TODAY

If you are ambitious—if you are interested in a high-paying career—investigate the opportunities in this profitable field.

FREE SAMPLE LESSON

Decide today to send for LaSalle's Accounting Lesson Number One, also FREE book, "Opportunities in Accounting." In it you will find complete information on the opportunities which are open to those qualified, and you will learn how you can prepare yourself for a better job and more money. NO OBLIGATION. MAIL THE COUPON TODAY.

to men who are trained in
Auto Mechanics
Now it's easy to learn quickly at home

"America is short 100,000 auto mechanics," a famous mechanics magazine reports. "America needs 25,000 more auto-repair shops," a noted motor executive announces. *Pay is tops:* In larger cities, it averages $3.00 an hour. *Steady work is assured:* Two-thirds of America's 62 million vehicles are in the "heavy-repair" class.

Why let the lack of training keep you from a better job, higher pay, and lifetime security? No matter if your education is limited—no matter how long you've been out of school—it's easy to learn Auto Mechanics at home in spare time. And, you can *earn as you learn*—many students do.

C.T.I. will train you in: Tune-Up and Overhaul; Electric, Cooling, and Lubricating Systems; Power Steering; Power Brakes; Automatic Transmissions; Clutches; Axle and Chassis Repair; etc. But get all the facts from two booklets we have ready for you. *Be sure to mail coupon today for your free copies.*

Get Experience Using Tune-Up Kit & Tools
(included with training)

CTI sends you a Tune-Up Kit, the kind that skilled mechanics use to locate engine troubles. You receive a compression Tester; Vacuum Gauge & Fuel Pump Tester; Ignition Timing Light; portable steel case. You also get mechanic's tools, including socket set. You acquire *experience* using kits.

DIESEL MECHANICS OR BODY-FENDER REBUILDING

is yours at no extra cost. Only CTI offers this *extra* choice. You get fully-rounded training in all phases of mechanics.

Many Students Earn Money as They Train

by taking part-time jobs in local shops or fixing cars "on their own." Many make enough to pay all tuition and buy extra equipment. Some open shops, become independent.

Get Facts Now—Decide Later

Your future is worth looking into. Get facts on job and business opportunities. Mail coupon today—Commercial Trades Institute, Chicago 26, Ill.

Shrinks Hemorrhoids
New Way Without Surgery
Stops Itch—Relieves Pain

For the first time science has found a new healing substance with the astonishing ability to shrink hemorrhoids and to relieve pain—without surgery.

In case after case, while gently relieving pain, actual reduction (shrinkage) took place.

Most amazing of all—results were so thorough that sufferers made astonishing statements like "Piles have ceased to be a problem!"

The secret is a new healing substance (Bio-Dyne*)—discovery of a world-famous research institute.

This substance is now available in *suppository* or *ointment form* under the name *Preparation H.** Ask for it at all drug counters—money back guarantee. *Reg. U.S. Pat. Off

I'd like to give this to my fellow men...

while I am still able to help!

I was young once, as you may be—today I am older. Not too old to enjoy the fruits of my work, but older in the sense of being wiser. And once I was poor, desperately poor. Today almost any man can stretch his income to make ends meet. Today, there are few who hunger for bread and shelter. But in my youth I knew the pinch of poverty; the emptiness of hunger; the cold stare of the creditor who would not take excuses for money. Today, all that is past. And behind my city house, my summer home, my Cadillacs, my Winter-long vacations and my sense of independence—behind all the wealth of cash and deep inner satisfaction that I enjoy—there is one simple secret. It is this secret that I would like to impart to you. If you are satisfied with a humdrum life of service to another master, turn this page now—read no more. If you are interested in a fuller life, free from bosses, free from worries, free from fears, read further. This message may be meant for you.

By Victor B. Mason

I am printing my message in a magazine. It may come to the attention of thousands of eyes. But of all those thousands, only a few will have the vision to understand. Many may read; but of a thousand only you may have the intuition, the sensitivity, to understand that what I am writing may be intended for you—may be the tide that shapes your destiny, which, taken at the crest, carries you to levels of independence beyond the dreams of avarice.

Don't misunderstand me. There is no mysticism in this. I am not speaking of occult things; of innumerable laws of nature that will sweep you to success without effort on your part. That sort of talk is *rubbish!* And anyone who tries to tell you that you can think your way to riches without effort is a false friend. I am too much of a realist for that. And I hope you are.

I hope you are the kind of man—if you have read this far—who knows that anything worthwhile has to be earned! I hope you have learned that there is no reward without effort. If you have learned this, then you may be ready to take the next step in the development of your karma—you may be ready to learn and use the secret I have to impart.

I Have All The Money I Need

In my own life I have gone beyond the need of money. I have it. I have gone beyond the need of gain. I have two businesses that pay me an income well above any amount I have need for. And, in addition, I have the satisfaction—the deep satisfaction—of knowing that I have put more than three hundred other men in businesses of their own. Since I have no need for money, the greatest satisfaction I get from life, is sharing my secret of personal independence with others—seeing them achieve the same heights of happiness that have come into my own life.

Please don't misunderstand this statement. I am not a philanthropist. I believe that charity is something that no proud man will accept. I have never seen a man who was worth his salt who would accept something for nothing. I have never met a highly successful man whom the world respected who did not sacrifice something to gain his position. And, unless you are willing to make at least half the effort, I'm not interested in giving you a "leg up" to the achievement of your goal. Frankly, I'm going to charge you something for the secret I give you. Not a lot—but enough to make me believe that you are a little above the fellows who merely "wish" for success and are not willing to sacrifice something to get it.

A Fascinating and Peculiar Business

I have a business that is peculiar—one of my businesses. The unusual thing about it is that it is needed in every little community throughout this country. But it is a business that will never be invaded by the "big fellows". It has to be handled on a local basis. No giant octopus can ever gobble up the whole thing. No big combine is ever going to destroy it. It is essentially a "one man" business that can be operated without outside help. It is a business that is good summer and winter. It is a business that is growing each year. And, it is a business that can be started on an investment so small that it is within the reach of anyone who has a television set. But it has nothing to do with television.

This business has another peculiarity. It can be started at home in spare time. No risk to present job. No risk to present income. And no need to let anyone else know you are "on your own". It can be run as a spare time business for extra money. Or, as it grows to the point where it is paying more than your present salary, it can be expanded into a full time business—overnight. It can give you a sense of personal independence that will free you forever from the fear of lay-off, loss of job, depressions, or economic reverses.

Are You Mechanically Inclined?

While the operation of this business is partly automatic, it won't run itself. If you are to use it as a stepping stone to independence, you must be able to work with your hands, use such tools as hammer and screw driver, and enjoy getting into a pair of blue jeans and rolling up your sleeves. But two hours a day of manual work will keep your "factory" running 24 hours turning out a product that has a steady and ready sale in every community. A half dollar spent for raw materials can bring you six dollars in cash—six times a day.

In this message I'm not going to try to tell you the entire story. There is not enough space on this page. And, I am not going to ask you to spend a penny now to learn the secret. I'll send you all the information, free. If you are interested in becoming independent, in becoming your own boss, in knowing the sweet fruits of success as I know them, send me your name. That's all. Just your name. I won't ask you for a penny. I'll send you all the information about one of the most fascinating businesses you can imagine. With these facts, you will make your own investigation. You will check up on conditions in your neighborhood. You will weigh and analyze the whole proposition. Then, and then only, if you decide to take the next step, I'll allow you to invest $15.00. And even then, if you decide that your fifteen dollars has been badly invested I'll return it to you. Don't hesitate to send your name. I have no salesmen. I will merely write you a long letter and send you complete facts about the business I have found to be so successful. After that, you make the decisions.

Does Happiness Hang on Your Decision?

Don't put this off. It may be a coincidence that you are reading these words right now. Or, it may be a matter that is more deeply connected with your destiny than either of us can say. There is only one thing certain: If you have read this far you are interested in the kind of independence I enjoy. And if that is true, then you must take the next step. No coupon on this advertisement. If you don't think enough of your future happiness and prosperity to write your name on a postcard and mail it to me, forget the whole thing. But if you think there is a destiny that shapes men's lives, send your name now. What I send you may convince you of the truth of this proverb. And what I send you will not cost a penny, now or at any other time.

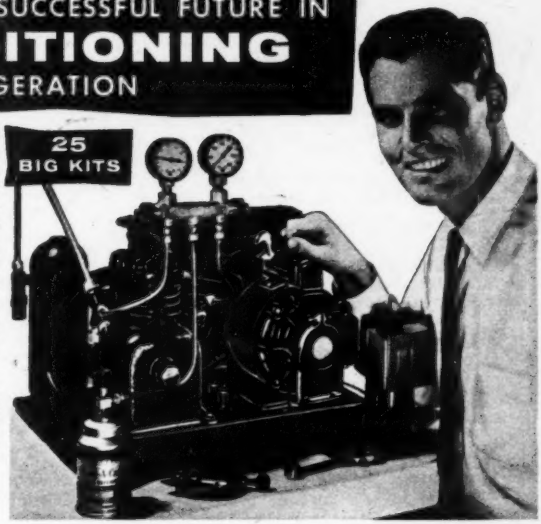
A Practical New Way to End Your Job Worries!

TRAIN AT HOME FOR A SUCCESSFUL FUTURE IN AIR CONDITIONING AND REFRIGERATION

If you want an interesting job that pays real well and offers year-round work—get into Air Conditioning and Refrigeration! It's a big, *uncrowded* field that is well-established—yet growing fast! *Each year over 20,000 newly-trained mechanics are needed.* No wonder! Today there are 150 million units in use—and each year over 6 million new air conditioners, refrigerators and freezers are manufactured. All units need periodic service and repair. The pay? Ranks with the best!

Refrigeration mechanics is an easy trade to learn... Especially when you get your training through CTI. *You can learn at home in spare time* by practicing with commercial equipment. Get all the facts about this wonderful new way to acquire a highly-profitable technical education. *Mail coupon today for fact-filled free booklets. No obligation whatever.*



Easy Way to Start a Business

Own a business—and enjoy independence. Thrill to the satisfaction of being the boss. Give orders—not take them! The refrigeration field is ideal for getting started on your own. You can make friends as you make service calls. In time, you'll have a list of potential customers. You can also sign service contracts with food stores, taverns, restaurants, etc. Thousands of CTI graduates have their own successful small shops.

Get Into Auto Air Conditioning

Experts say that over 400,000 air conditioners are to be installed in autos this year. The field is growing very fast. Already auto shops are advertising for skilled air conditioning mechanics. Opportunities are excellent for starting repair shops. Some day, air conditioners will be standard equipment on autos. So get in on the ground floor now. Our catalog has information on this specialized, profitable field. It's worth looking into.

You Get Experience as You Train Because You Practice with Commercial Equipment

Another CTI first! You learn by practicing—you get experience as you train—because CTI sends you 25 kits. You get all parts and tools to build a heavy-duty, commercial-type, ¼ h.p. condensing unit (illustrated above.) *You build an air conditioner, freezer, refrigerator, or milk cooler.* You complete 23 field-type projects—do 10 service and trouble-shooting jobs! You "boil down" years of apprentice-like training into months. Kit training perfects your skill, provides practical knowledge, assures useful experience, and helps you learn faster! CTI makes your home a training center.

Earn Extra Cash in Spare Time as You Train

Because CTI training is so practical, you'll soon be making profitable service calls. Perhaps you'll work "on your own." Or, you may prefer to get a part-time job with a local appliance dealer or air conditioning contractor. You can add to your income this way. With extra cash, you can buy additional shop equipment, pay your tuition, even bank money. Be sure to mail coupon for complete details. Act today!—*Commercial Trades Institute, Chicago 26, Illinois.*

TYPICAL LETTERS FROM SUCCESSFUL STUDENTS

"I have been very busy. Had an offer to work for an appliance dealer but it looks like I'll be in business for myself before long." —*Frank Fuller, Wells, N. Y.*... "Am now working in the field. Earn $40 more per month than before."—*Frank Krotser, Houston, Tex.*... "I not only got a job, but today am foreman, earning $60 a week more than before I enrolled."—*E. E. Hughes, Chicago*... "Have my own business. Only problem is: Too much business!" —*Conrad King, Cynthia, Ky.* You can do as well as these men!

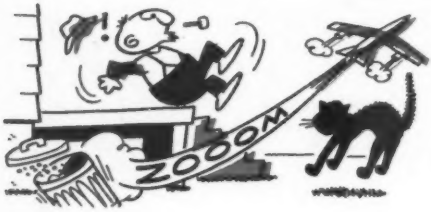
Dear Editor

Address mail to: MECHANIX ILLUSTRATED, Letters Editor, 67 West 44th Street, New York 36, N. Y.

• *Plane Plans*



Every time I blow my nose you fellers print another picture of an MI Baby Ace that somebody has built under his back porch. I want to get in on the fun, only where do I find plans for these things?

P. T. Butler
Wichita, Kan.

We're glad you asked that question because it happens that our wonderful, red-blooded American Information Department has made up a list of plane plans with prices and addresses, as a service to homebuilt aircraft bugs. Write to Information Department, this magazine. Please enclose self-addressed stamped envelope. The MI Baby Ace heads the list; for $20 you can get full plans from the Experimental Aircraft Assn., 9711 W. Forest Park Drive, Hales Corners, Wis. Other planes on the list range from a one-place, open cockpit monoplane to a two-place sailpane. In all, there are 28 plane plans.

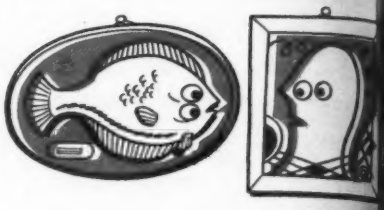
• *Simple Fact*

Beyond a shadow of a doubt, MI is the best magazine being published today.

John Groeble
Ithaca, N. Y.

You didn't say "positively."

• *Queer Fish*



Wynn Davis' article about flounder-fish really pleased me. Flounder-fishing is abo my speed, and I don't care who knows About the way their eyes migrate from o side to the other—I had always thought th were born that way. This fact will enrich my floundering from now on. I have oft wondered if the flounder gave the mode artists like Picasso the idea of painting ey that way?

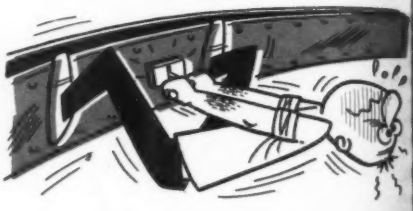
Simple Soul
Northport, N.

• *Another Yawn Cure*

I read with much interest the article W You Yawn by Carl Sifakis (April MI). notice that when I chew gum I don't yaw I can't see why this cheap remedy could help other victims.

Louis Wach
Winnipeg, Manito

• *Handy Magnet*



That Bear Paw magnetic handle that lif up to 300 lbs. (May MI, page 60) fascinat me. As the magnets used are permanent, can't figure out how you get the magnet loo after you have used it. Unless each Bear Pa is sold with two strong men to help you de tach it!

Joe Cassidy
Newport, R.

The great pull of the magnet extends on 1/16 of an inch. You merely flip the hand over to detach it.

Dear Editor

[*Continued from page* 10]

● *Nail Catcher*

When I picked up my copy of the May issue of MI and thumbed to the Inventions Wanted section, I found something quite interesting. It shows a man trying to catch nail parings as he is cutting them.

I just recently obtained a patent on a nail clipper that not only catches the nails but has several added features for complete nail grooming, including a cuticle cue.

Donald P. Killen
NEAT Sales, Inc.
P.O. Box 6205
Lakewood, Calif.

● *Silk Screener*

The writer would consider it a great favor if you would permit me a "sneak" appearance in your columns to invite correspondence from any of MI's readers who are interested in the art of silk screen printing as a hobby.

J. J. Jones
604 Eighth Avenue
Laurel, Miss.

Sneak right in, J. J.

● *Pollution Pamphlet*

With reference to the article in your April issue, Poisoned Air Is Shortening Your Life, by Bernard Seeman, you may be interested in the pamphlet, "Does Your Exhaust Pipe Smoke?"

This is, so far as I know, the only such publication designed for the driving public and produced in large quantities. Since the spring of 1957 more than 400,000 copies of this pamphlet have been distributed. We are happy to supply it to anyone who will request it by writing to Publication, Dept. of Air Pollution Control, 15 Park Row, New York 38, N. Y.

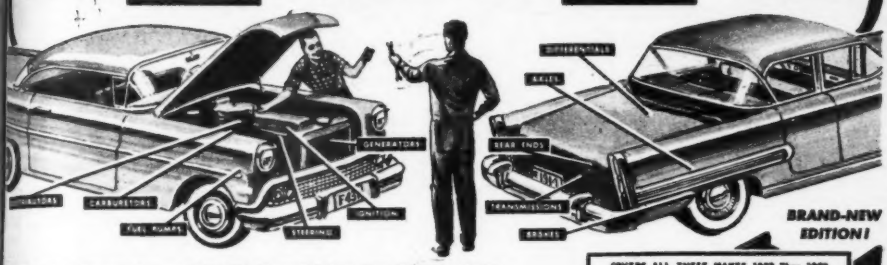
Kenneth Kowald, Secretary
Air Pollution Control Dept.
New York, N. Y.

● *Infinitesimal Ammo*

The watch chain pistol shown in Peewee Weapons, May MI, can be bought from Robert Abels, 860 Lexington Avenue, New York, N. Y. But the 2mm blank pin-fire cartridges cannot. You get the ammo from Philip Jay Medicus, 18 Fletcher Street, New York, N. Y., at the rate of 72 rounds for $3 plus shipping charges. Both will ship to any point in the U. S. outside New York City.

Now the Factory Experts Who Build Them Work "Hand-in-Hand" With You to

FIX ANY PART OF ANY CAR



BRAND-NEW EDITION!

Brand-New Edition of Famous MOTOR'S Manual Brings You The Step-by-Step "Know How" of Factory Experts — Makes EVERY Service, Tune-Up, Repair on ANY Car a "Breeze" for Beginner or Expert Mechanic

IMAGINE FACTORY EXPERTS – the men who actually build the cars – working at your side telling you exactly WHERE to look for car troubles . . . HOW to get started . . . WHAT tools to use . . . HOW to do practically ANY job *quickly, easily, right!*

OVER 3 MILLION COPIES SOLD!
•
USED BY U. S. ARMED FORCES

You just name it – a transmission job on a 1959 "Chevvy" . . . a valve job on a 1956 De Soto . . . a water pump replacement on a 1954 Mercury . . . a complete overhaul on a '52 "Olds." No matter what the trouble on any popular-make American car built from 1952 thru 1959, giant new MOTOR'S MANUAL starts you from "scratch" and leads you every step of the way. YOU CAN'T GO WRONG because your hands are guided by the men who actually build the cars – by the methods developed by factory experts to save time, work, and money!

"Have been anything about repairing cars until I got this wonderful book. Has paid for itself in me and time again." —T. Pooper, Wisc.

176 Official Shop Manuals "Boiled Down" for You

Engineers from every auto plant in America worked out these time- and work-saving methods for their own motor car lines. Now the editors of MOTOR have gathered together this wealth of "know-how" from 176 Official Shop Manuals and "boiled it down" into one handy indexed book!

This BIG REVISED Edition gives you everything you need to know to repair over 1,967 car models. Over 1,100 giant pages, 2,850 step-by-step pictures, 195 "Quick Check" charts, 225,000 service and repair facts. Covers *all the makes* listed on this page. You also get big chapters devoted exclusively to vital car parts themselves. PLUS a giant "Trouble Shooter" section to help you spot any one of 2,300 car troubles in a jiffy!

The "Auto Repair Man's Bible" — for Beginners and Experts

Even a beginner can do a good job with this BIG guide beside him. And if you're a top-notch mechanic, you'll find time-saving procedures that save you countless hours – increase profits.

"Have been a mechanic 25 years. Manual takes me out of tight spots. It's simple enough to be understood by average person." —V. Lauria, Mass.

Here's everything you'll ever need to know to do FAST repairs on Automatic Transmissions, Air Suspensions, Ignitions, Carburetors, Steering Gears, Generators, Distributors, Power Steering and Brakes, Dash Gauges, Starter Switches, etc., etc. All with instructions and pictures so complete that you *can't miss.* No wonder it's called the "Auto Repair Man's Bible"! PROVE it can work repair wonders for you, too – on this FREE trial offer . . .

Try It FREE 7 Days

SEND NO MONEY! Just mail coupon. (Paste it to a post card for fast action.) Use the Manual for a whole week, *free.* If you don't agree that it is the greatest time-saver and work-saver you've ever seen – return book in 7 days and pay nothing. Mail coupon today! Address: MOTOR Book Dept., Desk 938, 250 West 55th St., New York 19, N.Y. *(Schools, Bookstores: Write for discounts.)*

INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U. S. Patent Office and are prepared to serve you in the handling of your patent matters.

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without obligation upon request.

CLARENCE A. O'BRIEN & HARVEY JACOBSON

Invention Clinic

Joseph H. Kraus

In this column each month Mr. Kraus will answer as many letters as space permits on those subjects he feels to be of widest general interest. Time does not allow him to reply to any letters except those printed here. Address your questions to the Invention Clinic, *Mechanix Illustrated*, 67 West 44 St., New York 36, N. Y.

Porcelain Patch

C. A. Bedford of San Antonio, Texas, writes about a method of patching chipped porcelain so that it cannot be detected. What are its possibilities?

Terrific, if it works. If appliance men and plumbers can do it, so can do-it-yourselfers. The possibility of using it on autos should make it a big seller.

Automatic Fishing

Hubert J. Bourgeois of Milwaukee, Wis., has built and tested an automatic fishing rig which strikes and plays the fish until it is ready for the net. What is our opinion?

This enters the realm of the fisherman's psychology. A sportsman likes to think he is giving the fish a fighting chance. Often he tries to land a 25-pound fish on a six-pound line. Your rig would deprive him of this fun. On the other hand, there are many who might be interested in your equipment: those to whom catching the fish might make the difference between eating or going hungry, night fishermen, those who prefer to play cards while waiting for the infrequent bite. I recommend that you ask your attorney to make a patent search for you. Although I use the lightest rod and line possible, you have my order for the first rig you produce.

Courtesy Auto Lights

John S. Borthwick of Hamilton, Ontario, has an idea about courtesy lights to signal other cars or pedestrians to let them know that they are being given the right of way. Is this worth a try?

You have developed a good idea but it is not an invention. Anyone could set up the indicators and switch. Many states and cities have regulations which forbid such signalling systems, yet some trucks have been using them for years. Another bad feature is that the signals are effective only if they are fully understood by the general public. Even if you have a practical unit, I would urge a careful and complete investigation before going any further. Few signal devices have met with success.

Newspaper Box

Alvin Fugman of Yankton, S. D., has been producing aluminum newspaper-holding boxes and selling them through newsboys. A coin box is included. He has a pending patent. Would it be better to have agents sell them? Or should he sell to a manufacturer? If the latter, what royalty should he get?

Obviously you can't make any money by selling through local newsboys. And as you do not yet have a patent, you are in a delicate position when it comes to arranging royalties. About five per cent would be good. Mail order houses and agents might be your

[*Continued on page* 20]

INVENTOR'S TIP OF THE MONTH

Working overhead is hard on everybody but for bifocal wearers it's really a pain in the neck. Inventors should get busy on bringing the "working" lens into position when the head is tilted back. The obvious person to go to work on this would be someone in the optical field, although Ben Franklin, the inventor of bifocals, was not.

INVENTORS

If you believe that you have an invention, you should find out how to protect it. The first step is to have a search made of the prior pertinent U. S. patents. If a report on this search indicates that the invention appears patentable you can apply for a patent, and the specifications and claims should be prepared.

The firm of McMorrow, Berman & Davidson, with offices in Washington, D. C., is qualified to take the necessary steps for you. We can make a preliminary search on your invention, advise you whether we think it can be patented, and prepare your application for patent.

Unless you are fully familiar with the U. S. Patent Laws, we recommend that you engage the services of a Registered Patent Attorney to protect your interests. The patent laws are *your* laws. A patent gives you the right to prevent others from making, using or selling the invention claimed in your patent for a period of 17 years.

Use these patent laws for your protection. Investigate whether your invention can be patented. If you have what you believe to be an invention, we suggest that you have this firm make a search for you.

Send for a copy of our Patent Booklet entitled "How To Protect Your Invention," containing information about patent protection and patent procedure. Along with this we will also send you an "Invention Record" form, for your use in writing down and sketching details of your invention. We will mail them promptly. No obligation. They are yours for the asking.

Registered Patent Attorneys

PATENTS • COPYRIGHTS • PATENTS

1398 VICTOR BUILDING, WASHINGTON 1, D. C.

INVENTORS

WE recommend that you take the following preliminary steps toward patent protection. Make a disclosure of your invention; sign, date and have your disclosure witnessed by two people who understand your invention; authorize us to conduct a preliminary search among previously granted U. S. patents for similar types of invention. We give you a report on the probable patentability of your invention and our recommendation for further course of action.

Let us send you a copy of our instructive booklet, "Patent Protection for Inventors" and our convenient "Evidence of Invention" disclosure form. No obligation.

best bet. They'll want a 40 to 50 per cent discount. That might make your retail price too high.

Hi-Fi Speaker Mounting

C. Kujawa of Butte, Mont., suggests a double shell of fiber glass on which to mount the speaker of a hi-fi system. He reasons that the sound would not be diffused throughout the enclosure. Is this so?

If you can construct the double shell as described, there will be no sound between the shells. However, the shells themselves will conduct sound, so the result outside, which is the area which concerns you, will be nil.

Camera Mechanism

Frank L. Stempak of Chicago, Ill., has designed a film transport system for cameras which also doubles as an automatic generator to fill a capacitor to full charge. A principle new to cameras is involved. Could it be patented, and would an American or Japanese manufacturer buy it?

So far your design is on paper only. There is some question about its ability to charge a capacitor, and considerable doubt that this item will transport as well as you expect it to do. The very thing which makes it seem workable at one end will make it difficult to manipulate at the setting position. I strongly recommend a model. It should be fitted to a camera and given a good work-out.

A search will tell you about patentability. I, at least, never have seen anything similar. I feel that you should make the effort to develop this beyond the present stage. While a Japanese manufacturer offers a better market potential, there are many problems which will need to be resolved. •

LOOK! Jacket & Shoe COMBINATIONS Pay You BIG MONEY Every Month!

Just 3 Sales Daily Pay You Up To $600 a Month!

Here's an exciting new idea that gives you DOUBLE profits on every sale. Now you can sell famous Mason Shoes . . . and JACKETS to match! This tested "2 for 1 Plan" gives you TWO sales automatically for a single call. Just 3 orders a day for these fast-selling combinations will bring you $660 monthly profit. Think of all the money you can make this way!

Friends, neighbors, folks where you work will snap up combinations like this: warm Horsehide Leather Jacket, matching Insulated Boots. Mason products are never sold by stores! You offer greater convenience, unbeatable selection (over 230 dress, sport, work styles for men, women); sizes 2½ to 15; widths AAAA-EEEE. Super-soft Mason Air-cushion Innersoles. No wonder folks repeat time after time! No investment—Mason furnishes big Moneymaking "Portable Shoe Store Business" absolutely FREE. It's Coming!

New miracles of science that you'll be seeing soon.

A HANDKERCHIEF that can fight off bacteria will soon be on the market. The nose blower contains a permanent anti-bacterial finish called Eversan—developed by Ions Exchange & Chemical Corp. The finish is odorless and the handkerchief has proven non-toxic and non-irritating in normal-use tests.

Pre-cooked, dehydrated meals may solve future cooking problems in submarines, aircraft, large institutions and in the home, according to Dr. Virgil Wodicka, director of the Quartermaster Food and Container Institute's food division. Such foods can be kept for long periods without refrigeration and reconstituted quickly with the addition of hot or cold water. They taste good, too!

All-plastic merchant ships may one day sail the briny sea. Forerunner is an unsinkable, all-plastic lifeboat which was tested by the Coast Guard and will be put into service later this year. Such craft won't sink if punctured or broken in half and they also resist rot.

Radio-relay space satellites may soon make it possible for you to make a telephone call anywhere in the world for only 20 cents. That's the forecast of Dr. Lloyd V. Berkner, president of the International Scientific Radio Union. One satellite hovering in a fixed orbit 22,700 miles from the earth could relay 2,000,000,000 phone messages a year, said Dr. Berkner.

A new tire developed by Esso Standard Oil Co. will stop an auto in one-third less distance than conventional tires. It will stop faster on wet roads than ordinary tires will on dry roads and provides a smoother, safer, quieter ride. The tire also absorbs shocks from bumps and will not screech or squeal when stopping or rounding corners. The synthetic rubber tire is made from butyl.

An electronic ear consisting of a microphone and a sensitive amplifier may prove a lifesaver to trapped British miners of the future. Developed by the British General Electric Co., the device can pick up the tapping of a miner's shovel—the traditional w of letting rescuers know where they are through 700 yards of rock.

Wallpaper that can heat a house has be developed, according to Soviet scientists. T Russians claim the wallpaper is composed three layers of rubber-like synthetic m terial. The middle layer is a conductor when current is passed through it can h the fabric to 104°, it is reported.

A miniature buoy containing a tiny ra transmitter and a hydrophone to per rapid study of the ocean from an airpla is under development, according to J. J. C of the U.S. Naval Air Development Cen Johnsville, Pa. The device will offer a f way to study marine life, ocean depth a the contour of the ocean floor.

You may soon be able to get a drug t can prevent and control nausea and vomit safely without causing sleepiness and ot undesirable side effects. The drug, ca Tigan, will be available only on prescript according to Hoffmann-LaRoche Laborato in New York.

A new chemical treatment that makes c ton fabric more resistant to rot and sun terioration, developed by the U.S. Dep ment of Agriculture, promises to open markets for cotton in awnings, tents, paulins and other outdoor fabric items.

An improved artificial "voice" that u electronic parts is under development for p sons who have lost their voices through s gical removal or paralysis of their vocal co Bell Telephone scientists developed the a ficial larynx which allows control of pi

Better leather and hair are in store du results of new de-hairing process reporte Dr. Fred O'Flaherty, director of the U versity of Cincinnati's Tanners' Council L oratory. The hides are soaked in 13 water, then mechanically stripped of h Not only is the new process faster, but sultant skins have added luster.

258 WAYS TO GET AHEAD...FAST!

That's what I.C.S. offers you. No tricks. No gimmicks. Whatever your job interests—from accounting to zerography—there's an I.C.S. course tailor-made to help you get ahead in your present job. Or in finding a new career.

I.C.S. is the world's oldest and largest home study school. Each I.C.S. course is success proven by thousands of former students now in top supervisory and management positions.

Texts are prepared by experts—practical authorities in each field working with I.C.S. You get bedrock facts plus practical, on-the-job application. Everything you learn has immediate "cash value."

As an I.C.S. student you study at home—in your spare time—at your own pace. No time lost going to and from class, or waiting for slower students to catch up. If you like, I.C.S. will make progress reports to your employer to let him know you're the kind of person who not only wants to—but will—get ahead. Thousands of I.C.S. students report pay increases within months after enrollment.

THE TIME TO ACT IS NOW! The sooner you win the coveted I.C.S. diploma, the sooner you move ahead to bigger pay, a better job, real security.

3 FREE BOOKS! Check the subject that interests you in the coupon above. I.C.S. will rush you (1) a special book outlining opportunities in this field. (2) the 32-page gold mine of career tips, "How to Succeed," (3) a sample lesson (math) demonstrating the famous I.C.S. method.

SCIENCE SHORTIES

ONE lb. of coffee should yield from 30 to 40 cups.

The annual crop of U. S. babies has been over 4,000,000 for five years.

Actual tests have shown that the average sleeper unconsciously changes position 20 to 35 times a night.

Measurements show that the earth's crust under the U. S. ranges from a little more than 19.5 to nearly 32 miles thick.

An earth dam requires six to seven times as much material as concrete for a given height.

Nearly a million more fishing licenses were sold in the U. S. during fiscal year 1958 than in the previous year.

Asteroids are so small and so far away only one, Vesta, can be seen with the naked eye.

Special instruments can now permit observation of tissues and blood vessels in the eye and brain membrane without surgical cutting to get at them.

Scientists expect to find abundant amounts of Uranium 235 on the moon.

The U. S. faces an acute shortage of mathematicians within the next five years.

The atmosphere of Mars resembles that of the earth at a height of 50,000 ft.

Statistics show that the mortality rate is 75 per cent higher for single men than married men and 50 per cent higher for single women than wives.

Cancer took more than 250,000 lives in the U. S. in 1958.

An atomic-powered ship's churning propeller would probably be the most effective force in dispersing nuclear wastes.

A new electronic machine has been developed which can detect the intrinsic qualities of as many as 1,200 different levels of performance within transistors as tiny and as similar appearing as grains of rice. •

Make More Money Soon Fixing Electric Appliances

Train at Home in Spare Time

Better Pay—More Opportunities

Get into a field where there is important work and opportunity for the trained man. Millions of electric appliances are sold every year. Every wired home now has an average of 8. Many of them need service and repair. Owners pay well to have them fixed quickly, properly. This is your opportunity for a better job, your own part time or full time business. NRI can give you the training you need, at home, in your spare time.

Spare Time Earnings Start Soon

Soon after starting you will be able to earn extra cash fixing toasters, clocks, fans, vacuum cleaners, etc., for neighbors and friends. Keep your job while learning and earning. Put spare time to work for you. Work in your basement, garage, spare room. You'll be amazed how easily, quickly you, too, can start earning many extra dollars. NRI shows you how. Even before you finish training your spare time earnings may pay for the course and equipment.

NRI Sends Tester to Learn and Earn

You need proper equipment to service today's automatic appliances. With this course you get parts to build professional type, multi-use Appliance Tester. You learn to use it. Takes guess work out of servicing. Mail coupon for FREE book and Sample Lesson. See how easy it is to learn. Find out about NRI—a school that for more than 40 years has been training men, through home study, for success, good pay jobs. Our reputation, record, experience back up this course. Can wood stains, caused by rubber gaskets under glass of blond table, be removed? J.DE F.

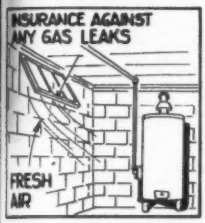
These stains are probably caused by carbon black in the rubber. You can try bleaching out the stains with a half-pound of oxalic acid crystals dissolved in a quart of water. Wear rubber gloves and goggles to protect your hands and eyes.

We think our heating system is leaking gas. How can we locate the source of the leak? G.E.K.

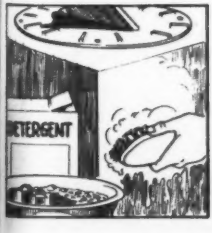


Please have an expert from your gas company check this dangerous situation immediately. Escaping gas is often difficult to trace, so rely on an experienced man to do this job. Meanwhile I suggest that you keep plenty of fresh air coming into your house.

Temporary additional footing has failed to check our settling house. Please advise. M.E.

Excavate four-foot sections under the foundation down to solid base and fill with concrete. When set, do the same thing with an adjoining section and continue all around the foundation. Or have grout pumped into the soil under the house.

What is the best method for cleaning granite monuments? H.H.S.



Soapy water, a stiff bristle brush and vigorous scrubbing will clean granite. Detergents can also be used. Sometimes fine steel wool will help cut through heavy dirt. The use of muriatic acid on granite is not advised.

94.6% OF BAILEY GRADUATES ARE EMPLOYED AT TOP PAY IN THE FIELDS WHICH THEY WERE TRAINED!

DIESEL-AUTO MECHANICS DESPERATELY NEEDED!

We have a far greater demand for our students than we can fill!

We can show you an actual waiting list of leading companies throughout the world who have tried Bailey graduates — found them outstanding, and are coming back for more!

Bailey Graduates are Successful . . . RECEIVE BIG PAY — HAVE SECURE FUTURE!

The Famous Bailey Course prepares you for BOTH Diesel and Gasoline Mechanics.

This is a must-due to the advent of using Diesel principles, such as 'Fuel Injection' on passenger cars . . . use of gasoline engines for starting Diesel engines, etc. You learn all this at Bailey in the amount of time ordinarily required to learn just one of these subjects, **ALL FOR THE PRICE OF ONE.**

Don't be satisfied with a 'futureless', one-type job — learn how you can make big money now!

Write today for Free Booklet that takes you on a step-by-step camera tour through our spacious, modern shops — See Bailey students in action as they Learn-by-doing with the Famous Bailey Method of training!

We provide you with housing and part time jobs while in school, plus nation-wide placement service for graduates.

When Answering Advertisements

Please Mention MECHANIX ILLUSTRATED

The Ford Galaxie Sunliner is one of today's top performing cars. Like 35 other great makes, Ford uses Champions.

Q. Why do over *twice* as many car makers specify Champions?

A. These experts know that Champion is the *performance* spark plug. To get top performance and economy in your car, put in new Champions every 10,000 miles.

World's favorite spark plug—engineered for every car built by Ford, General Motors, Chrysler, American Motors, Studebaker-Packard and every major foreign maker.

CHAMPION

Mail for McCahill

Uncle Tom is sorry he can't answer all his mail personally. In this column he'll answer the most interesting letters. Write to him at MECHANIX ILLUSTRATED, 67 West 44th St., New York 36, N. Y.

had an argument with my husband as how much it costs to operate our car. it costs about 20 cents a mile; he said 15 cents a mile. Could you settle this? It's a '57 Dodge, cost $3,667.18. We get miles per gallon and average 50,000 a year.

Margaret Lonsberry
Flint, Mich.

your letter I assume you intend to the car up at the end of a year. Even at it shouldn't have cost you more than a a mile. On a 50,000-mile basis, 20 cents would come to $10,000. But $1,500 more than pay all your gas, oil and nce bills, so what do you do with the left over, even if the car is junked on 365th day and you didn't collect insur-? Even the molten hulk would be worth thing as junk. Anyone who drives 50,000 a year can show a real profit at ten a mile with a car of the Dodge class. yours is a '57 model, it shouldn't have you more than seven or eight cents a —and probably less.

have a 1956 Plymouth and I would like to know what causes it to stall on damp rainy days.

Mrs. Arnold Beneccio
Monessen, Pa.

uming you haven't been running out of the chances are your ignition system has sopping up too much moisture, which be caused by road splash or by rain g through the radiator core. A cracked butor cap, bad plugs or tired wiring can use stalling in wet weather.

I notice in March 1959 MI you refer to the last Rolls-Royce you tested. I'd like much to get a copy of your report on it. I'd also like to know your opinion of a Rolls for ordinary use by a small town general practitioner such as myself.

Dr. M.
Georgia

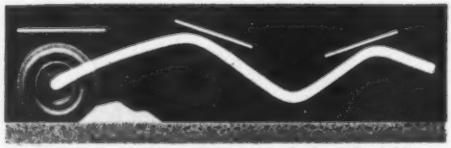
The Rolls test I made wasn't published. However, the 1959 Rolls, selling for roughly $13,000, is a steal when compared with some of the flotsam and jetsam being offered today. From a quality standpoint the Rolls cannot be beaten, though it is no performance king and won't win any speed or acceleration trials. The car will look just as up-to-date five years from now as it does today. As a car for ordinary use by a small town general practitioner, here is my opinion, as long as you asked for it. Driving a Rolls-Royce in a small town is as likely to go unnoticed as a bishop conducting Easter Sunday service in a T-shirt. It's bound to raise questions—and you'd better have the answers.

● *I was coming down a steep grade recently in mountainous country when my brakes faded out entirely. I was scared to death but fortunately reached the bottom of the grade without having an accident. As my car had an automatic transmission, is there anything I could have done to slow it down? What advice would you give? I understand this is a pretty common problem.*

Fred Deere
Cleveland, Ohio

It's extremely common in hilly or mountainous country for brakes to give out. This is especially true when the descent was started too fast. My advice, especially on downgrades you're not too familiar with, is not to be going too fast in the first place. The moment the car feels as though it's getting away from you, shift your automatic transmission into Low whether it's a button or handle shift. This is usually all that's needed to keep the car under control on all but the steepest descents but there are occasions when even this isn't enough.

[*Continued on next page*]



Here's what happens with worn shocks. Wheel hits bump, then returns to road . . . but violent spring recoil pulls it off road a second time. Meanwhile car body (indicated by plane lines) rocks severely. This causes serious loss of control, shakes up passengers, takes miles off tires.

With new Gabriel Ajustomatic shock absorbers, wheel hits bump, returns to road . . . and stays there! Spring recoil is absorbed, entire car recovers from impact almost instantly. Besides increasing safety, comfort and tire mileage, this helps prevent spring breakage, actually lengthens car life!

Gabriel Ajustomatic shock absorbers give greater comfort and car control

If you've gone over 20,000 miles on your present shock absorbers, chances are you need new ones. Ask your service station attendant or garage mechanic to give your shocks the Gabriel safety check now . . . especially if you are planning a family trip soon. And if you *do* need new ones, tell the man you want Gabriel Ajustomatics, the modern shock absorbers that can be adjusted to give you the kind of ride you need, for the kind of driving you do!

Lee Petty won the recent 500-mile stock car race at Daytona riding on Gabriels! Lee says: "It sure was a wonderful feeling riding on those Gabriel shocks. They gave me perfect control throughout the race, even on the curves. I wouldn't have any other shocks on my race car . . . or my family car, either!"

Gābriel
ADJUSTABLE SHOCK ABSORBERS

THE GABRIEL COMPANY • Cleveland 15, Ohio

Never use your brakes so much on a dow grade that they'll get to the fading point they should, however, there is sometimes last emergency stop left in one or more the brake drums. Push your brake pedal to the floor and stop the car. In five or minutes the drums will be cooled off so will be safe to continue.

When the compression braking of the L gear isn't enough to stop you in time fr going over a cliff or into another car, yo best bet might be to leave the road on opposite side from the cliff or even to a for some smallish tree. In some terrain, ev ripping a wheel off is enough to slow yo Generally speaking, almost anything is bet than going off the wrong side. Sideswipe a tree (not hitting it head-on) may slow y and so will some sizable rocks. But if they too big you'll end up deader than a six-d Irish wake. The best bet in such a d emergency is to try to roll the car gently on side into a ditch or take the inside wheels It's a hard choice, admittedly, but possi better than nothing. One friend of mine sa himself in such a situation by rubbing guard rail so hard that it not only took the side of his car out but the heavy sta holding the railing tore off a wheel. What important, though, was that he stopped was unhurt. The guard rail gambit is a lit risky. Play it safe—just go uphill.

● *My brother owns a TR-3 and he li disc brakes. He was wondering why D troit doesn't put disc brakes on their cars*

Pat McMul
Bastrop, La.

Money. Chrysler offered them on seve models for some time but discontinued the as they proved quite expensive to service

● *After reading and re-reading in M* CHANIX ILLUSTRATED *your build-up of fo eign cars and the run down of our American made cars, maybe you would just like to to one of these foreign countries and li Then see if the average man can purchase a kind of car. I have a son stationed in a foreig country with the Air Force. He says peop that live out of the cities have never heard a car. Many more people like you, a American people might be the same way. am an American and am for American ca and thank God an average person can st buy one.*

"An American-made car mechanic Tyler, Tex.

Goody for you, "American-made car me chanic." By the way, how come you weren't good enough American to sign your name?

[*Continued on page* 46]

ER! WIDER! SAFER!

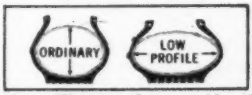
A radically new way to build tires!

LOW PROFILE TIRES

SAFETY SHAPE

"BIGGEST THING THAT EVER HAPPENED TO TIRE SAFETY!"

says Tom McCahill, America's most famous test driver and car expert



New U. S. Royal Low Profile tires represent a radically new type of tire engineering...specifically designed to meet and exceed today's driving conditions. They are lower, wider. This unique safety-shape gives them a "cool-flexing" action. Keeps them 13° F. cooler than conventional tires. Gives them greater protection against blowouts, far greater tread mileage. Protect your family with this great new safety "first" from U. S. Royal. See your U. S. Royal Dealer.

- **SAFER at top turnpike speeds no matter how long you drive!**
- **SAFER against tire heat that causes ordinary tires to blow out!**
- **SAFER control on turns and curves!**
- **PLUS GREATER ECONOMY–25% to 35% longer mileage!**

Originally introduced in the U.S. Royal Master, world's finest premium tire...

[Continued from page 44]

● *I was told by a friendly cop recently when he saw my electric razor that works in the cigar lighter, "Don't get caught using that underway or they'll throw the book at you for reckless driving." How about this, Uncle Tom—is this a square deal?*

Jimmy Herndon
Miami Beach, Fla.

On a number of occasions I've been guilty of this practice myself. But I must concede that as thousands of drivers have a hard enough time just keeping their cars on the road, this would be, in many cases, careless driving.

● *Having been a fighting fan of yours for many years, I was pleasantly surprised to find a picture of you peering under the hood of either a Chevy or Buick on page 230 of an old copy of a rival magazine. You were not only sporting a jazzy pair of suspenders but also a couple of dozen hairs on your head.*

Forrest L. Thorpe, Jr.
Denver, Colo.

"Couple of dozen" your foot! I had 57 genuine hairs. Back in those days I was a callow youth and was serving my apprenticeship with the "rival" before being rescued by MI through that simple expedient, more d

● *We will be leaving soon to go li Rome, as my husband is accepting there. What would you recommend as a car in Rome?*

Mrs. Charles M. Ea
Sykesville, Md.

When in Rome, do as the Romans do a chariot.

● *I lost my left leg in an on-the-job dent nearly three years ago and c return to my lifetime job, so am going on a U. S. Mail contract from Kremml Craig, Colo., via Gore pass. This will six-day-per-week job. In your opinion, of the following station wagons would b ter for me: Rambler American, Stude Lark or Willys Jeep? Gore Pass is 9,000 feet and can get real bad in winter distance is around 30 miles to be run way—no rural boxes, just first class mail to post offices.*

B.F.Goodrich ***Smileage dealers***

HOULD A CAR'S NGINE BE IN FRONT R IN THE REAR?

es quite a difference. Driving a engine car is not like driving a gine car at all. Automotive engi- ave tested many cars lately to get facts. The results of those tests are nt to every driver in America.

egin with, all the rear-engine cars were decidedly back-heavy. Such nced design produces a dangerous characteristic called "oversteer- hich causes a car to exaggerate cts of cross-winds and even road- . On the wide-open straightaways modern highways, where cars are uffeted by powerful cross-winds, r-heavy automobile is exceedingly t to control.

the other hand, front-engine cars e SIMCA react in the opposite They actually tend to *compensate* slope of a road-crown, and *fight* gainst cross-winds. The difference dling is due to the difference in t distribution.

d since front-engine cars are so easier to control, it follows that produce less driver fatigue than eavy cars.

mpared with SIMCA, the rear-en- imports leave much to be desired. SIMCA outweighs them overwhelmingly. SIMCA is longer, wider, and much more powerful. SIMCA is bigger inside, with room for a family of 5 in even the lowest priced models. ($1698 East and Gulf Coast ports of entry. Inland freight and local taxes extra.)

In overall performance, there is no comparison at all. Speed Age magazine said: "SIMCA's fantastic road-holding ability is second to none." Motor Life magazine said: SIMCA "sticks to the turns as if it were on tracks." Sports Cars Illustrated said: SIMCA "will outperform anything else in its price class."

But there's more to the SIMCA story than this page can tell. Look, why not get *all* the facts? Send for our free booklet. Tear out the coupon now, so you won't forget.

Chrysler Corporation
P. O. Box 1919, Detroit 31, Michigan

Mail For McCahill

[*Continued from page 46*]

I know Gore Pass well. The Jeep would have the best chance of making the run the year round but would cost more to operate than either the Rambler or Lark. However as your total daily run is to be only 60 miles the extra expense of the Jeep shouldn't be too great. When Jeeps can't go, nothing can —short of a Weasel or Big Cat.

● *Tell me, does it make a difference if you start your car with the lights and/or your radio on? Some people say it does, some say it doesn't.*

J. Crooks
St. Louis, Mo.

Some people is nuts. If your battery is low and your car hard to start, your chances are a lot better if you turn everything off but the ignition until the engine starts.

● *I've just finished reading of proposed new highway regulations in the Pittsburgh Press. Some points of this "safety program" appear to be sound and really worthwhile but there is the ever-present preoccupation with speed per se. Passing a stopped school bus is much more serious than going a few miles over the speed limit, in my judgment, but here they are on a par with one another. Strict enforcement of this nature calls for an accurate, more restricted legal definition of the term "speeding" than that which is generally interpreted. A very important factor which the Governor's program overlooks entirely is the unrealistic speed limits on many of the state's roads and highways. Don't you agree, Tom, that Pennsylvania's uniform 50-mph limit on all highways other than the Penn Turnpike is a little antiquated, to say the least?*

John E. Weiss
Johnstown, Pa.

The entire state is pretty antiquated, especially some of the knuckleheads in high government offices. A 50-mph speed limit on some Pennsylvania roads is ridiculously slow, while on some others it would be impossible to go that fast and stay alive.

● *Thank you for your article defending automobile racing. I was quite upset by the Senator's article because there are people who will probably believe every word of it. (If it's from a Senator, it's got to be good?) There was, in 1952, a bill introduced to give Tennessee back to the Indians.*

Margot Greig
Asheville, N. C.

Recently I was with Sen. Gore of Tennessee the Latin Quarter in Miami. I asked him, "Hey, what about those Indians?" I get the pression the good Senator was not in favor returning his state to them. However, he d admit our mutual friend, Jack Daniel, nufactures a sterling example of true early erican craftsmanship.

For the past many years we have consulted your comments before buying a w car and have never been wrong; for this, ny thanks. But we have a bad situation w and would like to know what you think. st September we bought a new car and got hat I would call a lemon. Its road time was ualed only by its shop time. After 6,000 les of this inconvenience, 5.8 miles per gal-, missing and bucking all the way, rattling orse than a Model T and leaking like a sieve, e wrote the factory. Their District Repreentative contacted us and the agency. The r has been back three times since without uch improvement. Though we only buy a w car every three years, our only clear path to get rid of the "thing" and change to a ferent manufacturer this year. My question this: The factory representative says "There no such thing as a lemon." I'm damn sure here is. What do you think?

Irvin L. Senske
Seattle, Wash.

Yes, Irvin, there are lots of lemons, despite hat the factory guy said. In your case it unds to me like they gave you the whole ee.

If money were no object, is there any sure way of winning the Indianapolis 00?

T. J. Feeny
Wilmington, Del.

Aside from buying the other 32 cars, no.

It may interest you to know that mechanics and hot-rodders aren't the only nes who read your column. I'm a traveling usician and have friends in show business, ith questionable mechanical abilities, who ead it also. Recently we bought new cars ith standard shifts. The dealer claims these rs at trade-in time will not be worth much n today's market because of the standard rives but we ordered them anyway. Is it eally a bad investment to buy a standardhift car today—and is it true they aren't orth much because there is no market left or them?

Norman Steckney

(Cigar Division) Phila. 7, Pa.

PIONEER IN MODERN LITTLE CIGARS

ELECTRONICS ILLUSTRATED

tells you more... in its authoritative, complete coverage of all the latest developments in the world of electronics.

shows you more... with its exciting picture-stories; its variety of do-it-yourself projects; its step-by-step wiring guides.

If you've been following all the past issues of ELECTRONICS ILLUSTRATED, you know what to expect—expert authors, large, clear photographs and illustrations, inside information on all aspects of the electronics field.

If you *haven't* been reading EI, you've missed such fine features as:

- **How to Assemble Electronics Kits**
- **How to Get Overseas Electronics Jobs**
- **How to Buy Hi-Fi**
- **Low Cost Automatic Garage Door Opener**
- **How to Build a Safe Model Missile**

We promise you more of the same top-level material in the coming issues of ELECTRONICS ILLUSTRATED.

Now, for the first time, EI is being offered on a subscription basis. This means a savings to you, plus the convenience of home delivery and the knowledge that you won't miss a single issue.

So get your subscription blank in the mail today.

Please enter my subscription to ELECTRONICS ILLUSTRATED for:

☐ **1 year: $3.00** ☐ **2 years: $5.00**

In U. S., possessions and Canada.
All other countries, $6.00 per year.

Mail For McCahill

[*Continued from page* 49]

It is true that it's a little harder to sell an American car with standard transmission today. Despite this, many real automobile men still prefer a good old reliable gas-saving and top performance stick shift. As an investment (meaning buying a car with re-sale in mind), the automatic transmission makes it easier to push off, slipping bands and all, to the next sucker.

● *A neighbor of mine has a 1933 Essex Terraplane in fair condition in his barn which I think I can get. What would be a right price for it?*

J. N. T.
Stamford, Conn.

Ten bucks for hauling it away—25 for burying it.—*Tom McCahill*

DON'T DO-ITS

Speaking of Jobs . . .

Horse Cooler

QUINE friend. Horse Cooler gives drink to thirsty horse from pail in hot New York City.

THE average hard-working horse among the approximately 1,000 pull-and-sweat beasts that labor on the torrid streets of New York City in the summer neigh with delight when they spot the Horse Cooler. The Horse Cooler is the driver of the New York Humane Society's Watermobile, a pickup truck that carries a special drum containing 50 gallons of pure, clear, cool water to quench the thirst of Manhattan's hot horses.

The Horse Cooler dispenses water to about 50 equines a day. The average horse gulps about five gallons of water a day. And according to Humane Society officials, you have to be careful that a horse doesn't drink himself to death, especially if he's overheated.

The Society's waterboy starts from midtown each morning at 9 a.m. and roams the city until 5 p.m. Most of the water recipients are equines who haul fruits and vegetables, junk and other heavier loads.

The Watermobile of the Humane Society of New York has been helping horses and other animals for the past 50 years. If the horses could speak, they'd probably say, "It's real cool, man!" •

it's easy, it's fun... Actress Venetia Stevenson, Warner Bros. Pictures
